Steve Morrison[SMTP:iamsteve@earthlink.net] thusly spake:

> You've made mention to MS Works before, but can you use it with serial
> port communications.

Duhhhhhh, not sure I know what you mean there. WORKS isn't
a telecom program, but it doesn't fight them, either. If you
can multitask, then WORKS can run at the same time as a
terminal program is running. No rub, no sweat.

> I mentioned a few days ago that I might be
> interested in writing a program that is totally customizable, but it
> would have to be able to upload/download to/from computer controlled
> scanners. Can you do that with Works?

Shy of a few specialty programs (like DOORWAY), I can't imagine
the relationship of any other program to a terminal. You can
send and receive files of any type through a terminal, including
WORKS files. Also WORD, ACCESS, POWER POINT, text files,
executables, *.DBF and a zillion more.

WORKS can generate files in a dozen different formats, suitable
for the needs of most any application that "consumes" data. But
WORKS, like most other production applications, does not have
any inherent telecom capabilities on its own.

Whatever application you write will have to have the telecom
capability in its front end. You won't find anything with
that already in place, aside maybe from specialty things like
DOORWAY, and that would not suit your purposes, I don't think.

Perhaps you could be a little more specific with the objective,
and I could maybe point you better. I think you might be confused
a little by all the radio control programs out and about...like
ScanCAT, etc., all of which, I'm pretty sure, have their own
proprietary communications interfaces.

Does anyone make a shareware or runtime generic commo front end?
I don't know, but maybe that's what you're needing? All I know about
programming is that it comes on radio and TV. :-)

Rgds,

-= Bill =-

>:>and others who are too busy to mess around learning the heavy duty
>:>stuff, but still want some power.

>Yes, but some don't like spending the time.

I'm sure there are bona-fide cases of those who don't have the time.
But most people are afraid of learning something new. To those, it is
incumbent on us to encourage a step up; not a step down. So, someone
doesn't "like" spending the time? Tough. It goes with the turf.
Once a person acquires the basic tools and learns how to use them, he
is better off.....MUCH better off. And so are his kids, wife, and
perhaps even friends.

You see, once we learn something slick, we tend to run off and teach
it to someone else. You can't find a thing wrong with that. And
there is everything RIGHT about it.

> You could do the same thing in a
>word processor just by using tables.

Ohhhh noooooooo you can't. Only SOME things. The power of a real
database manager is unparalleled for managing a frequency file of more
than a couple hundred freqs. And once you learn how to use a database
manager, the knowledge spins off to other areas. The overall quality
of Life can improve remarkably.

I just graduated a Valedictorian daughter last year. Top of her
class, dude! But is she "smart"? Not like some of the "brains"
there. But she dusted their britches, big time, because I required
her to work and to learn how to use her computer. A son is hot on her
heels to graduate with even higher GPA than her. He's not "smart"
either. I just kick his butt and keep shoving 'im forward.

Anyway, I deal in knowledge and triggers. Whichever a body wants,
I'll help 'em get. Bottom line? Microsoft WORKS for Windows is what
I call a "trigger". A dude gets to dabbling with it, and before long,
the fellow is up there doing big time stuff.

Don't argue this one with me, pal. It's a loser, but you're right -
folks can shovel manure for a living all they want. I sure won't stop

'em. But neither do I peddle shovels and hip boots. People can use word processors and funky frequency managers all they want. I won't stop 'em. But I won't encourage 'em, either.

I will encourage 'em to take a leap of faith to a higher level. Any argument to the contrary for that is shallow and stifling. Some things are arguable. This one ain't. Not for any good purpose, anwyay.

JD>> of here, so what? It's only a hobby, after all. Your 6 rules
JD>> above are more to the point, and best yet, I even read all of
JD>> them. :) Bill, will you reconsider?

JM> I agree, it was a lot of bullshit.

Please understand on NO UNCERTAIN TERMS that if you think the Rules
are a "lot of bullshit" then your participation here is on borrowed
time. If you express that thinking, then you're flirting with the
ZERO TOLERANCE policy.

JM> I did EXACTLY the same thing. I gave up reading it and figured
JM> I'ld continue as I had.

If you continue even ONE more time "as you had", your access to this
echo will be terminated. The fact that the Rules are not perfect yet
is the ONLY reason I'm not cutting your access for this instance of
insolence, but you will cease and desist from any further public
displays, under the ZERO TOLERANCE policy.

JM> If that many rules to the length that was given, then there is a
JM> problem.

I already agreed with Scott Christianson that some improvement was
needed. He expressed his concerns in a straightforward manner. You
could have done so, too, without a ripple on the pond. As Moderator,
I will solve the problems, and as a participant, YOU will abide by the
Rules. Neither are negotiable.

JM> Putting a stangle hold on a echo has killed many echos.

This echo will fare well as we build upon solid principles and even
better without the kind of insolence you just brandished.

Don't do it again.

Geezus H. Kriste, Mackey, there we have it - the complete transactions
that resulted in you being sent sailing through the air a trifle less
graceful than the man on the flying trapeze. No lies there, Mackey.
Just two solid warnings for you to cease and desist. I usually give
just ONE warning. You got two. And you're pissed? Whooooooeeeey!

All I can tell ya, pal, is....getting pissed off is a whole lot better
than being pissed on. Looks to me like you opted for BOTH.

>As I said above, I suggested a truce to Bill & I think he is abiding by
>it. He appears to have been taught the lesson, "if you fuck with the BULL,
>you're gonna get the HORN". Hopefully, he will NOT have to be taught this
>lesson a 2nd (or 3rd) time.

So truce it. Or....."teach me again", if you like. <shrug> I am
always up for learning new tricks. You know me, Mackey.

Anyway, we have the TRUTH laid out nice and neat like. Slicker than
greased snake snot on ice. Betcha didn't think I would hold on to the
"evidence", huh? Don't get yourself sucked into faulty thinking
anymore, my fine flippant friend. You are dealing with.....the best.

:-))

I am interested in purchasing a Realistic Pro-51. I've heard of a hack where cell phone transmissions can be intercepted in models dated before the dating code 7A4. I've found one with the date code 7A2. Trouble is, I do not know how to interpret the code. Was the 7A2 unit made before a unit marked 7A4?

I'm looking for frequencies used by the
H.A.M.L. Transportation company, in New Brunswick, NJ. This is the
company that runs the campus bus system for Rutgers University.

Anyone have a list of these? If not, is there a listing of freqs used
by NJ Transit?

Thanks in advance,

Looks like the new Service Merchandise catalog has 6 brand new 900 MHz phones. Most of them appear to be spread spectrum/digital. Maybe now we can get the audio quality they have been promising us with 900MHz digital.

The last batch of phone were mostly made by Vtech and had scratchy audio.

Hi Brian,

The answer to your question is yes, very much so. I have rarely had a day go by w/o comm!

Right now I have three freq's in use and one has very good surveillance comm on it. This is the NY Metro area, lots of potential to make money or do something that is illegal. These guys are busy morning, noon and night.

But this wouldn't be expected if you live in the farm lands of Iowa. Perhaps another agency may be more active. Down south my Texas friends live for US Customs action.

I hear the DEA is a busy group in WA, any confirmation on this? That just gave me an idea for a post. Thanks for any info you can supply on the DEA. E-mail me if you don't feel comfortable posting things.

BTW, I have over 130 CONFIRMED FBI freq's in the NJ/NY?PA area, very active indeed.

Regards,
LGS

I just got a scout and am disappointed with it. I expected better sensitivity - it will not pick up my cordless telephone (46/49 Mhz type) until it is within 4 INCHES of the handset or about a foot of the base.

And even then, one bar on the signal meter may light.

What is worse is that the frequency is not accurate and calibration does not help.

Outside, it only picks up a VHF paging system (which is on 152.480) and displays anything from 152.400 to 152.560, but never 152.480) And it only detects this range when the paging transmitter is transmitting.

So, if you want to use it to snoop out cordless phones, low power radios, or such around town, it does not seem to be the tool.

Filters may help, but for me I am sending my scout back.

I might have a lemon, if you have had much better experiences, let me know. Mine also wines and buzzes (not the vibrator) continuously every once in a while. Turn it off and back on and it quits.

Can anyone suggest anything?

Seems that a lot of mystique still surrounds Ni-Cads. I'll dish out some knowledge i've obtained from racing R/C cars powered by 6-cell ni-cad packs (voltage 7.2volts, capacity[depending on type of battery] 1400-1800milliamps)
1. a quickly discharged nicad will produce heat, just as a nicad will disperse excess energy via heat when overcharged.
2. i typically will discharge a pack to 1.0volts PER CELL, and will charge Sanyo SCR batteries at 10amps until peak voltage is reached(the charger will determine this and shut off automatically)
3. the old days detected a full charge using temp. as a base.
4. the charger technology is excellent: the different types include peak chargers, pulse chargers, reflex chargers...

Nice try guys, but I might wait a while before starting construction of that
favorite "look alike" antenna. This one is DEFINITELY going to end up in
court as has been discussed on several broadcasting list severs because the
FCC is trying to preempt deed restrictions and every homeowners association
is against this. Just waiting for the fireworks to begin.

Sony makes a cassette recorder that is solenoid controlled, i.e .the capstan/roller won't be constantly engaged. It would not wear out like you described. I haven't seen that Sony Style magazine around so I can't tell you the model number. It could record for 3 hours on one standard tape.

1437. READ THIS NOW!!!

Newsgroup: rec.radio.scanner
Date: 1996-08-15 00:00:00 UTC
From: pmcdaddy@usit.net
Message-ID: <4v18k1$l35@news.usit.net>
Source record: 226415

Turn a measly $5 into $50,000!

Taking 5 minutes to read this text may be one of the best decisions you

ever made.

I could make $50 000 within 4 weeks for an investment of only $5. I

thought it was a huge joke! I spoke to my friends about it

and they thought likewise. But after three days of desperate struggle

I decided I had nothing to lose.

My family and I sent $1 by snail mail to each of 5 names and addresses

specified in the article. We then

placed our own name and address in the article and posted it in 200

other newsgroups.

Two weeks later, I started receiving money in the mail! I could not

believe it! Hundreds of dollars turned into thousands, and in the 4

weeks,

I received a total of $53,654. It came from all over the world.

If you follow the 3 steps below, there is no reason whatsoever why the

same shouldn't happen to you. This is a perfectly legitimate investment

opportunity. You invest $5 and you receive a return on your investment.

So does the next investor. NOT ILLEGAL, NOT A CHAIN LETTER - PERFECTLY

LEGITIMATE!

OBVIOUSLY, IF YOU ARE NOT INTERESTED, THEN DON'T PARTICIPATE. BUT

PLEASE

PRINT THIS ARTICLE AND GIVE IT TO SOMEONE WHO MAY WISH TO TAKE

ADVANTAGE.

The procedure is very simple.

STEP 1. Write your name and address on 5 separate pieces of paper with

the words "PLEASE ADD ME TO YOUR MAILING LIST". Fold a $1 note or money

order or bank draft in each of the pieces of paper and mail them to the

following five addresses:

****

1. Qunwei Yu, 11405 Tiverton Court , St.Louis, MO 63146

2. Nat Heatwole, 7550 Damascus Rd., Gaithersburg, MD 20882

3. Jeff Katz, 7 Seir Hill Rd, #41, Norwalk, CT 06850

4. Eric Johnson 14817 Holden Circle, Horizon TX, 79927

5. Patrick McElroy 818 Hollow Creek Dr. Newbern, TN. 38059

****

STEP 2. Now remove the 1st name on the list, move the other 4 names up

(5 becomes 4, 4 becomes 3 etc) and put your name and address as number

5 on the list. You can do this by re-typing this article or simply

editing and re-posting it in this or another newsgroup.

STEP 3. Post your amended article to at least 200 new groups (there are

17 000 of them).

You are now in the Mail Order Investment Business and you will start

receiving $1 returns by mail within a week or two. The more newsgroups

you post to, the bigger your return will be. You may want to rent a

Post

Office Box to handle the volume of mail you are likely to receive.

If you wish to remain anonymous, you can use a pseudonym such as

"The Manager" or "The Investor", but make sure your address is correct!

NOW LET ME TELL YOU WHY THIS SYSTEM WORKS!

Of every 200 postings I made, I received an average of 5 replies, YES -

ONLY 5, each with a $1 bill enclosed. You make $5 for every 200

postings WITH YOUR NAME AT NUMBER 5.

Each person who sent you $1, now also makes let's say,only 200

additional postings WITH YOUR NAME AT NUMBER 4, i.e. 1000 postings.

On average therefore, 50 people will send you $1 with your name at

number 4. You make $50.

Your 50 new agents make 200 posting each WITH YOUR NAME AT NUMBER 3

or 10 000 postings - average return 500 at $1 each is $500. They

make 200 postings each WITH YOUR NAME AT NUMBER 2 = 100 000 postings

= 5 000 returns at $1 each = $5 000.

Finally, 5 000 people make 200 postings each WITH YOUR NAME AT NUMBER 1

and you get a return of $50 000 before you name drops off the list.

AND THAT'S IF EVERYONE DOWN THE LINE ONLY MAKES 200 POSTINGS! Total

income in one cycle = $55 500.

From time to time, when your name is no longer on the list, you take

the latest posting that is appearing in the newsgroups, SEND OUT

ANOTHER $5 TO THE NAMES THAT ARE ON THE LIST, PUT YOUR NAME IN

AT NUMBER 5 AND START POSTING AGAIN. Remember, 200 postings is only

a guideline. The more you post, the greater the return.

Let's review the reasons why you should do this: THE ONLY COST FACTORS

ARE 5 STAMPS, 5 ENVELOPES, AND 5 $1 BILLS. Anyone can afford five

dollars to put into such an effortless investment with SPECTACULAR

RETURNS.

Some people have said to me "What happens if the scheme is 'played

out' and no one sends me any money"? Big deal! So you lose $5 - but

what are the chances of that happening?

Do you realise how many Internet Users there are? Do you realise how

many times this scheme can be utilised over and over again - with COMPLETELY NEW people participating?

There are not HUNDREDS, NOT EVEN THOUSANDS, BUT HUNDREDS OF THOUSANDS OF NEW INTERNET USERS EVERY MONTH!

Remember, read the instructions carefully and play FAIRLY...that's the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that sends you money and always keep an eye on the newsgroup postings to make sure everyone is playing fairly. You know where your name should be.

Lets keep this all in perspective Bill. You REFUSED to discuss the issues over on the fidonet echo. You WOULD NOT respond to private netmail about the situation, & you KICKED OFF those who attempted to discuss with you in open forum. THAT type of throwing weight around is what got you where you ended up on this newsgroup.

You appeared to accept a truce. Please stay honest & factual so I don't have to intervene with the truth again.

These two files are an accumulation of frequencies which have been
posted by a large number of people of the past many months. I can't
vouch for any of the frequencies, I've simply put them together. If
you've got the space, program them all in and listen. Enjoy!.... and
REPORT BACK!
.....
MONITORING AIR SHOWS
By Larry Van Horn

As one might expect these frequencies change as fast as these
high performance military aircraft do. Due to local usage, etc
these frequencies do vary. My best suggestion is to start out
Friday afternoon prior to the weekend airshow when the demonstration
teams normally do a practice airshow for the local dignitaries
and school groups. This is an excellent time to scope out possible
new frequencies the different teams might be using. This should
be enough to get you ready for the two shows the teams will be
doing over the weekend.

362.600 - Air Show Control
363.350 Possibly a typo on one list of 263.350 (?)
363.500 Possibly a type on one list of 263.500 (?)
382.500 Blue Angels - Air-to-Air
384.400 - Blue Angels - Air to Air Channel
391.900 - Blue Angels - Air to Air Channel
395.500 Blue Angels - Air-to-Air
395.900 - Blue Angels - Air to Air Channel

Both 307.700 and 302.150 were used at different times during
practice during week of 4-19-94. Either might be used in the
actual shows, or both might.

Note that not all frequencies are used at every airshow, there are a
lot of "alternate" channels, to avoid local users on a given channel.
Also, during practice, channel usage does NOT conform to actual airshow
usage - for instance, 263.350 may be used as air to air, instead of just
for calling the mechs on the ground to request repairs on landing.

Practice, channel usage does NOT conform to actual airshow
usage - for instance, 263.350 may be used as air to air, instead of just
for calling the mechs on the ground to request repairs on landing.

Trying something new BILL?

What a lot of wasteful Bullshit you sent. That was an AMAZING waste of bandwidth. OF course you did your usual & sent ONLY the one side of the messages that you wanted to be shown.

Bill, look at the dates you sent me the crap. Your warning was sent and BEFORE fido traffic could get them to me you fired off a 2nd warning.

You are smart enough to know that fido traffic takes 2-3 days.

The 3rd warning you sent to me was because I suggested to a fella I was talking to that we move to the cellular echo since we were talking about cellular issues. YOu then kicked me off for talking about another echo. But you seemed to missed putting that in here with your tirade of Bullshit.

You have been pretty good for a few days, don't blow it Bill.

It would be nice to have this freq group, but wouldn't it just be
repeating what's
already here in these groups already? You have the groups for scanner
buffs. What is the primary purpose of having a scanner? To listen to what
goes on around you.
How do you get the particular areas to listen to? By entering frequencies.

I picked up some stuff in the puget sound both clear and DES encrypted,
but for the most part they tend to be pretty in-active unless there's
something major happening.

I don't recall the freq, but I beleive it was the Mt. Constitution
repeater.

More like a fantasy. I am *very* sorry to read of your loss; statistics show 1 in 4 women will suffer from that form of cancer. But let's please keep emotion out of this ruling. Self-denial that RF cannot cause illness will only hurt yourself, but coming on here and stating that to hundreds of thousands of folks is irresponsible.

Keep your HT at its lowest power setting (not only for health reasons but also to comply with Part 97). Use a speaker mic and hold the HT at arm's length when transmitting (who cares what that will look like - you'll be setting a good example).

Be safe,
Jeff KH2PZ

If you ever visit the Los Angeles area, listen for the units' numbering system on the air. You'll probably hear very similar call signs. Yes, One Adam Twelve is a correct unit number according to the LAPD numbering system. Take it from me, a guy who used to listen to LAPD (KMA367) on the end of the AM BCB broadcast band in the mid fifties. Happy Monitoring...Brian

Why don't you just buy a new pinch roller? I use the CTR-82 also and
probably abuse it as much as you do :)

>anybody make one optimized for VHF-Hi and another for UHF?

Hi.

I've used the "Thin Stick" from the Smiley Antenna Co. for the last 6
months and have loved it. I use it on a Uniden portable but see no
reason why it wouldn't perform as well on the Pro-43. It's a
5-section adjustable antenna with overall max height of 18" and has a
BNC connector with a spring which allows it to flex slightly if you
bump it. This is, IMHO, a great feature which may save the BNC
connection point on top of your radio since the spring will take the
brunt of the force if you should bump it (it has happened to me
several times :) Since the antenna is variable in height, it can be
"tuned" to improve reception.

Anyway, you should be able to get the antenna for under $18 and AES
and other outlets would sell it.

<<well - if you start hearing calls for 15 mary 3 and 15 mary 4, look out - cause "Ponch and John" are back again!!!>>

Actually, their units were SEVEN (7) Mary 3 and 4.

However, in the show, they were supposedly operation out of CHP's Central office, which has the unit designation of "15". But the station that they always showed the overhead shots of? I believe that is the WEST LOS ANGELES (#79). Someone will correct me if I'm wrong, but it's at the intersection of the Santa Monica and the Harbor Freeways in LA.

: > Dr Pepper
: > 10 - 2 - 4
: FYI,
: AZ uses VASCAR, which is a _very_ accurate sighting device. No radar is
: used on most of the inter states.
: The AZ HP extender freq. is 154.935 in most areas. They communicate in
: the 460.225, 460.325, etc. arena.
: Good scanning
: Temp

Temp,

VASCAR is a system that is employed here in the smaller towns of
Pennsylvania because only state police can use radar on the interstates.

VASCAR is not a sighting device. It's TWO WHITE LINES spaced about
200 or 300 ft apart, which a hidden police officer presses start and stop
where your car crosses the lines on a little timing device on his dash. It
measures the time, divides by the standard distance, and computes your
speed.

Trust me, I've gotten tickets before with it..

For Sale: Bearcat 250. This unit works, sometimes. It has one of the problems that Bob Parnass documents in his "fixing Bearcat scanners" post, but I'm too disinterested to get it fixed. Bought new by myself in 1979, and is cleaner than any other '250 I've ever seen at a hamfest, etc. Non smoker. Antenna NOT included, available at RS, etc. Asking $35. Includes power cord.

e-mail at zuschlag@eagnet.com

1470. Re: Question about DES capable radios

Newsgroup: rec.radio.scanner
Date: 1996-08-15 00:00:00 UTC
From: stevewest@aol.com
Message-ID: <4uvhu9$ovg@newsbf02.news.aol.com>
Source record: 226509

Many radios, especially those made by Motorola can have "mode-slaved" or "operator selected" encryption. Using "mode-slaved" anytime the radio is moved to a specific channel it automatically goes encrypted (without the operator doing anything). In the "operator selected" option, the radio operator simply flips a switch on the radio to encrypt that channel.

Using Motorola's DES technology there are some 7.2 million encryption codes available. They (Motorola) also have a new line of digital radios (the Astro series) which first convert the analog voice signal to a digital format, then encrypt the digital signal. Even if you did figure out the right encryption sequence, a digital scanner does not (yet) exist.

1471. Need more help w/BC 2500XLT MOD

I tested the BMI NiteLogger II and published a review in
the current issue (Aug 96) of Monitoring Times magazine.
IMHO, it is an impressive product. Since no schematic was furnished
with the NiteLogger II, I "reverse engineered" and analyzed
the circuitry of the one I borrowed and published a complete
schematic in MT.

>Does anyone else
>besides AES carry this unit?

Grove Enterprises also sells the Nitelogger II. I don't know
which dealer has the best price.

I'm not familiar with the newer cars, but the older ones , , , , Just
get under the dash and unscrew the connector that holds the speedo
cable to the rear of the speedometer. Drop it down and with a
twisting motion, remove the cable. Then you can apply some hi temp
grease *spareingly*, reinsert tye cable and away you go.

I am so tired of the babies on here. How long will it take you to figure I am not leaving? So get use to it!
I have more experience in my pinky that most of you can even ponder. Quit e-mailing me with your petty problems. I will not leave and I promise that.
For those of you trying to kick me off the net, Fuck You! My ISP will not touch me. I pay to much money for them to do anything. And for you losers that send me "e-mail bombs", I hope toy have fun getting them returned. The sooner you learn I am the king the better.

Ok, I wasn't for sure we were playing to the same sheet of
music there. WORKS 3.0 came with its own terminal program,
but that didn't have anything to do with what you were
getting at, or so I reckoned, anyway. Now I know it doesn't.

You're right about ACCESS having hooks to the network, regardless
if it's a DUN, LAN, WAN, or whatever.

WORKS does not, to the best of my knowledge. I can't imagine
anyone using the WORKS database like ACCESS, with multiusers and
a hierarchy of "permissions"..

> Now when I talk about writing a program, I'm talking about a program
> that performs computer controlled scanning AND has database capabilities.
> Using Visual Basic and the MS Jet Engine (Access) this is very possible! "

Yeah, ok. I know what you're talking about now. But also all
I know about programming is that it comes on radio and TV.

> One program that does it all" I get the impression from you that this seems
> far fetched, but actually I write similar programs all the time.

Nah, you just didn't explain it all that well, and I wasn't
hip enough to be real sure that's what you were talking about.
But now that you mention it, I am familiar with some efforts
to use ISAM or PROISAM to hook between a database and an RS-232
controller.

> So, what I'm trying to get at... Do you think there would be an interest in
> a program like this (a good one!) that would allow you to keep track of
> all your freqs, and upload them to the scanner on the fly?

Well, sure. But that is every bit of a hardware issue as a
software one. Sounds like you can handle the software side, but
what about the hardware? Scanners, with a few exceptions, do not
come with an RS/EIA-232 interface. In general, the interface has
to be retrofitted and THAT is a major hardware issue.

> If the answer is yes, then I'd be interested in some feedback as to exactly what
> features this program should have. If I design a program for myself, that's fine,
> but I'd like to create something that can helpful to everyone.

Right. Well, ok, let's start on the same sheet of music. WHAT
hardware are you interested in addressing? If you limit yourself
to those worldband radios that come with a comm interface, then
you will be in direct competition with .... gosh .... 4-6 others
out there....like ScanCat, fer instance. But there are more.

If you're talking about something else, then I'd need to know
what it is before saying much more. In principle, I *think* you're
onto something. But part of what you're wanting to do is way
outa my league. Hardware, I can help with. Software, probably not.

Rgds,

Bill

>you to transfer information from it's programs to the twisted pair.

Ummmmmm, well......yeah, I know....WORKS 3.0 has it. Not 4.0. But
the WORKS terminal program is just that....and even though good, is
like most any other terminal program. It beats the snot out of the
one that ships with Windows 3.1x, for sure. But it's not exactly what
that other fellow was getting at, so I didn't mention it for fear of
confusing matters all the more. He was talking about something else.

>Bill, there may be some folks out there that are unfamiliar with
>Works. It is what is called a "utility" program, because it has a

>have used it since 1987, and it is almost intuitively easy to use.
>I wouldn't use anything else. :-}

Let's put it this way.....I ran a business for a few years on WORKS.
Many small businesses are operated from WORKS. Even though I have now
migrated to ACCESS, WORD, EXCEL and POWERPOINT, I still use WORKS a
lot for day to day needs, notably the database manager and the
spreadsheet to some extent.

For the hobbyist, I don't think it can be beaten. For the SOHO, WORKS
is mighty hard to beat. But even once beaten, it STILL holds its own,
especially as a set of tools for the radio monitoring warbag. Hands
down, there ain't nuthin' like it.

Back in my ignorant days of 30 years ago, I may have rigged up a set
of thermocouple temperature sensors to 'em. But anymore, I don't
sweat it because what self-respecting charger keeps on recharging as
the pack comes up to full charge? Even funky cheapos slow the charge
rate as the pack comes up to charge.

No, but I am under the suspicion that you WORK at area-51 and are
employed by the government. Why? The government wants money. The end.
That is the reason for its existance at this time, that, and world
domination, of course. This alone is enough to prove you are stationed
at the base known as area 51.
Not only that, but you are encouraging concerned people to monitor
area-51 which may result in their termination by the cammo dudes.

>band, just not been able to do any searching.

Yes, the TR-1200 is what ACE Communications started selling the AR-1000 as
when they lost the US distributorship for AOR brand products.

To program a search bank:

SEARCH
PROG
[enter lower frequency limit]
LIMIT
[enter upper frequency]
ENT
[enter search step increment in KHz]
AM/FM/WFM (if needed)
ENT
search bank# [0-9] ENT

To select several consecutive search banks to be used:

SEARCH
BANK
PROG
[lowest search bank] 0-9
LIMIT
[highest search bank] 0-9
ENT

EXAMPLE:

To search the air band:

1. Place 108-136, AM mode, 25 KHz increments into bank 0:

SEARCH PROG 108 LIMIT 136 ENT 25 ENT AM ENT 0 ENT

2. Program search mode to use banks 0 thru 0:

SEARCH BANK PROG 0 LIMIT 0 ENT

Then hit SEARCH.

DP,
The Garmin GPS products I have used take about 2 minutes when first turned on to wake up and find themselves (if it were only so easy for the rest of us...). Once operating, they provide real time fixes, speed over land, etc. Depending on how much cabbage you spent, they will provide raw Lat/Long info, moving maps, maps with landmarks and waypoints, etc. Accuracy, uncorrected, is within 50-100' in my experience, although I think they say to only count on it to provide within 300'.
Corrected GPS, at an airport for example, is accurate enough to taxi the aircraft out from the terminal to the runway, take off, enroute, approach, land, and taxi up to the terminal! John Noble

Well, I just lost my mother 2 months ago to breast cancer. She was not a ham, and you could not get her to even pick up a mic. It came on suddenly and ended suddenly. Started with a small lump in Jan 95, ended in death June 96. Cancer isn't funny, nor is blaming something for causing it without proof.

I saw what my mother went through, and wouldn't wish that on anyone. I hope you have much better luck, which I'm sure you will.

Perhaps the use of an HT helped keep the cancer cells at lower level than they would have been without it?

Just a thought.

Take care..

1507. Better Rubber Duckie for Pro-43???

Newsgroup: rec.radio.scanner
Date: 1996-08-15 00:00:00 UTC
From: woodman@west.net
Message-ID: <32126ff1.1335391@news.west.net>
Source record: 226568

One of my portables is a Pro-43 and I was wondering if one of the techies in the group could suggest a source for a better Rubber Duckie antenna. I've got a feeling that somebody out there makes a better replacement antenna. Does anybody make one optimized for VHF-Hi and another for UHF?

Hello Tracy,

What state do you live in? The FBI has a few standard freq's but they use different freq's by and large depending on the area of the Country the Office is in.

About 8 years ago in the NJ/NY area things changed from the 163 and 167 bands used to the 169-174 band currently in use.

The standard usage seems to be in the 166-168 band these days. Most everyone will hear them on a few freq's w/i this band.

They most popular ones are 166.050, 167.2125, 167.2625, 167.2875, 167.5125. I'm sure someone will post a nice list if you give the specifics, like your state.

Regards,
LGS

RK,

In the August issue of Monitoring times, Scanning Report section,
details problems with trunking systems that municipalities
experienced. These are excerpts from the MT column. Please read the
entire column for all of the details.

MT noted that Huntsville Alabama has many problems with their system.
Not only did the system alienate the department from the public, but
Federal agencies such as the FBI were no longer able to monitor the
communications. The police even admitted that the trunking system was
not necessary. Some police officers were having such a hard time with
the new trunking system, they bought CB radios from Radio Shack to
communicate! The city spent 4.5 million dollars on a so-called state
of the art trunked system and some police are relying on CB radios.

MT has also heard of problems with trunked radio systems in Portland
Oregon, and Kansas City MS.

Message-ID: <4utqbf$sj7@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 226573

To all:

Sorry about the multiple posts to the PRO-43 scanner antenna but I can't seem to get the AT&T Netscape to work right. Previously I've posted at least 6 times with no problems. However, the last two times I've tried to get mail out to the newsgroup the software has balked.

It's insisted the group did not have a valid DNS entry.

It's locked up my computer and force me to reboot.

I've seen it display the msg it was mailing the post and it simply wouldn't stop, the send light stayed on. This always causes the multiple posts.

Is there anything I can reconfigure in my Netscape program or is this a Netscape problem running with the AT&T software? Any clues would be appreciated, thanks

Lou Shirley

No, that's not exactly correct.

Re: 1 Adam 12

"1" designated that the unit was out of LAPD's Central Division.

"Adam" designated that the unit was a two-man patrol unit.

"12" simply referred to the unit number. There MAY be something to the number referring to which "watch" the unit is whether day, evening or nights, but I'm not sure on that. I don't THINK so, however.

There never was a "real" unit number of 1A12, it was just for TV.

1526. Voice Activated Recorders for Scanning

From: lui@netcom.com
Message-ID: <lui-1408962232400001@192.0.2.1>
Source record: 226587

Well, my Realistic CTR-82 Voice Activated Recorder has just about died from overuse with my scanner. The pinch roller is starting to slip. I'm in the market for a new voice activated recorder, and I wanted to know if anyone has a suggestion.

I saw the BMI Nitelogger II Automatic Tape Recorder Activator in the AES catalog. I could get one of these, and a new tape recorder. If the tape recorder goes out, I can just buy another (regular cassette recorders aren't too expensive nowadays).

The BMI Nitelogger II takes an 8 ohm source (the scanner external speaker output) and matches to a 600 ohm microphone input (attenuating the signal also). It also has a built-in monitor speaker with volume, drop-out sensitivity, and delay controls, and a record light. Sounds like a perfect solution. Are there any other units like this available? Does anyone else besides AES carry this unit?

I think my CTR-82 is one of the few voice activated recorders with an aux input which accepts line level signals. All of the current Radio Shack voice activated tape records only have a mic input.

Actually if the pump was installed right it would have a bypass right
back to the tank. The pump can keep on pumping and it would just go
back where it came from

Here it is again...for those that wanted it and missed it the first time.

August 1996

Friday, April 12th, I found a previously unused, undocumented frequency. Normally such an accomplishment is accompanied by bragging, chest pounding, and other infantile displays which are performed in order to show oneï¿½s feeling of personal omnipotence. Of course, I was not so subtle. My immediate concern was to brag to Bob KS-001, who routinely unearths such information before me. My wife was in mid blink as I left the room to make the phone call to him, so she completely missed my exit. Anyway, the frequency is 867.3375 KNNJ875 licensed to Douglas County Sheriff. Detective work revealed that Douglas County has been testing the equipment, and that it will most likely be their dispatch channel in the future. Douglas County dispatch and mobiles already have the ability to talk with troopers and dispatch on KHPï¿½s new 800 system, so it makes sense that they would go 800 for their own communications. It should eliminate the need for a low band radio and an 800 radio in each car.

My point of going overboard about this discovery is to illustrate that anyone can stumble across something like it. Patience is the key. In this case I searched from 866 to 868.9875 MHz for weeks until the frequency came to life, and then spent several days listening to it. The NPSPAC manual indicated it was licensed to Douglas County (see February ï¿½96 column) so I called them and they were able to confirm it. Those of you who are fortunate to have several scanners could dedicate one to a search while the other radio scans your normal frequencies. If you canï¿½t identify something you discover, drop a note to me and I will try to track it down. I have lots of contacts with fellow dispatchers around the state and can often get answers to hard questions.

This might be a good time to recap the Kansas 800 system, and what has been discovered so far. Kansas is developing a statewide 800 MHz system for all state agencies...KDOT, KHP, KBI, Fish & Game, etc. It will be a quiltwork of different types of sub-systems including:

1. New trunked systems licensed to the state.
2. Existing trunked systems owned by other agencies on which the state is allowed
to "piggy back."
3. Trunked and/or conventional repeaters in the NPSPAC frequency range.

To complicate things, NPSPAC (National Public Safety Planning Advisory Committee) has dished out the 866 to 868.9875 range for ANY Kansas agency to use...state, county or local. If you have read some of the Kansas columns, you probably noted portions of NPSPAC frequencies routinely listed there. Since all the agencies involved may allow other

agencies on their systems (primarily on trunked systems), you will never know just who may pop up on a frequency. Here are some of the known frequencies for the state, as well as some NPSPAC frequencies for non-state agencies:

ï¿½ 856-860.4875 KS state trunked system in Topeka
Shawnee County agencies, KHP, KDOT, KBI, etc.
ï¿½ 856-860.7125 KS state trunked system in Manhattan
(havenï¿½t heard from anyone out there who can confirm this one yet)
ï¿½ 856-860.9625 Johnson County trunked system
Johnson County agencies, KHP
ï¿½ 856-860.7625 Kansas City KS trunked system
KCK all city services, KHP
ï¿½ 856-857.7125 Ellis County trunked system
Ellis County agencies, KHP
ï¿½ 856-860.2625 Sedgewick County trunked system
ï¿½ 856-860.4625 Sedgewick County trunked system
ï¿½ 856-860.7375 Sedgewick County trunked system
ï¿½ 856-860.9625 Sedgewick County trunked system
Sedgewick County agencies, Wichita agencies, KHP
ï¿½ 866.0125 Mutual Aid
ï¿½ 866.5125 Mutual Aid
ï¿½ 866.6750 KHP Bonner Springs
ï¿½ 868.6750 KHP Eskridge (Topeka area)
ï¿½ 868.1750 KDOT Bonner Springs
ï¿½ 866.1000 KDOT Olathe
ï¿½ 866.7125 KDOT Osawatomie
ï¿½ 866.9750 Unassigned in NPSPAC manual
KDOT type traffic heard (Donï¿½t know if this is a good one or not. Will keep checking.)
ï¿½ 867.2000 KDOT in Waverly
ï¿½ 868.8625 KHP in Lawrence
ï¿½ 866.6875 KHP Olathe
ï¿½ 868.9250 KHP Corning
ï¿½ 867.3375 Douglas County

Keep those scanners searching the 866 to 868.9875 range and report what you find. It looks like the Kansas system is coming together quickly, and we need all the reports we can get.

As promised, more NPSPAC frequencies are to follow.

Jackson County 866.2000 Jefferson County 866.2375
Jackson County 866.5375 Jefferson County 866.4875
Jackson County 868.5000 Jefferson County 868.4750
Jackson County 868.7500 Jefferson County 868.7250
Johnson County 866.2625 Johnson County 866.3375
Johnson County 866.3625 Johnson County 866.3875
Johnson County 866.5375 Johnson County 866.6125
Johnson County 866.6375 Johnson County 866.6625
Johnson County 866.7875 Johnson County 866.8875
Johnson County 867.8250 Johnson County 868.1000
Johnson County 868.1250 Johnson County 868.2000
Johnson County 868.3500 Johnson County 868.3750

Johnson County 868.4500 Johnson County 868.5250
Johnson County 868.7000 Johnson County 868.7750

Till next monthï¿½

Andy

The pumps from around that year are missing a filter that ford did not put on there. They have it on previous ones and newer ones but not on that one. If the car is still under warrenty (?) I can get you some information that will let you get the problem fixed for free. Ford reconized the problem and will fix it if anyone is interested. The problem is also in CB radios. The filter will fix it. let me know if you are interested in the information

PS the problem is also on several cars and trucks ranging about 3 or 4 years.

Does anyone know if there are PDs/FDs with GPS onboard their cars/engines etc so that dispatchers always know their locations within a block? If there are, is this data used for dispatching; do cars stop reporting their locations, (and various other questions come to mind)?

toby

1536. FOR Sale -- "DC-to-Daylight" AR1500

Newsgroup: rec.radio.scanner
Date: 1996-08-16 00:00:00 UTC
From: edseeger@electrotex.com
Message-ID: <4v28lb$rup@news.electrotex.com>
Source record: 226347
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.swap,alt.radio.scanner

Not just your conventional ambulances and park police scanner!

The AOR AR1500 is a wide-range monitor engineered to receive International Shortwave, Military Aircraft and Airshows, Ham Radio CW with a BFO, plus both Upper and Lower Sideband (LSB + USB) as well as 10-Meter FM, Citizens Band (CB), and yes, boys and girls, it is *FULLY UNBLOCKED* and receives You-Know-What!

My unit is complete with its rubber ducky antenna, a soft leather protective case, NiCad battery pack, shortwave antenna, owner's manual, and I'll throw in four AAA NiCads in a backup battery case that fits into the radio's own battery compartment. Naturally, it's got its plug-in recharger, too.

And then there's a copy of Howard Bornstein's AR1000 tricks and techniques book, which gave me a ton of great ideas for setting up search and scan banks for the AR1500. As you'd figure, I'm leaving intact my own memory bank setup to get you started.

The AR1500 was the tried and true predecessor to the more pricy AR8000. If you've drooled at the prospect of buying the 8K but can't quite hack the price, this 1500 may fill the bill for you.

Here on the Texas Gulf Coast it has proven itself a snooper's dream! Cellular? No problem! 49-Mhz portable phones? I know all the neighbors up and down the street! Student pilots starting out in twin engine trainers at the Naval Air Station? I hear them and their tower, while watching them buzz over the house out on Padre Island! Life guards on the beach, talking to one another like junior cops (10-4, what's your 20. Roger Wilco.)? They can't wait to quit a shift with too many jellyfish stings, climb onto their windsurfers or Ocean Kayaks and head out to the offshore oil rigs.

Coast Guard helicopters, harbor pilots bringing in the oil tankers, foul-mouthed shrimp boat captains, Radio Espana al Exterior, VietNam, and on and on!

Why am I selling a unit I have obviously gotten a lot of enjoyment out of? Simple -- four scanners at home is one or two too many! Period.

I'd like $450 for the AR1500. I will ship insured
FedEx overnight in return for your certified check.

e-mail me if you'd like the '1500: edseeger@electrotex.com

Reply-to: bote@access.digex.net

I am trying to get line-level, non-speaker audio out of a Motorola Spectra radio.

I see where they have provided for it on pin-11 of the rear accessory connector on the dash-mount Spectras. It does qualify it to say "SP applications".

So, what SP modification must I make to get audio out of this pin? It does not put out audio as it is now. Is it programming, like turning on the vehicular repeater or is it a hardware jumper?

Thanx in advance.

bote@access.digex.net

I remember it as "14-7 Mary 3&4", though that seems like a long designator

> Remember 240-Robert?

Are you kidding? I flew cross country to test for the LASD mostly because of
that show. The deputies I met told of being paid to guard the show's trucks
and helo on locations on their off-duty time.

Here's a more obscure one: Remember "Pine Canyon Is Burning"? (a pilot TV movie,
did not end up as a series). Hint: Kent McCord was an LACoFD Captain FF/PM.

Or, going lower on the quality scale, "Code R" (not to be confused with "Code
Red")?

We now return you to the regularly scheduled R.R.S.-related topics.

Well, let's add something to THIS, also:

Everyone pretty much knows that the show "Emergency" (or, as I like to call it, the "Johnny and Roy Show") depicted the exploits and adventures of FICTIONAL "Squad 51" of the Los Angeles County Fire Department.

Until recently, however, there NEVER was a REAL "Station 51".

Within the last year, Los Angeles County Fire Station 60, a real working fire station located on the grounds of Universal Studios here in LA, was renamed STATION 51 in honor of the show.

Most certainly. The software is available for free on the internet.
Believe it is called something like pe301.zip or something close.

As for a transmitter, you would have to do some work, since I cannot think of any legitimate reason for anyone to make a transmitter on any freq with this low of power, except for cheasy bugs and such.

>Military GPS is much more accurate. They don't have any error introduced
>in their code, so their accuracy would be limited by the GPS unit
>accuracy, sattelite positions, etc.
The upshot of all this was during Desert Shield/Storm is the military
had to shut off the error code in the satellites becuase they couldn't
issue the ground troops the GPS recievers. People were mailing their
relatives GPS portables from US Cavalry. Not a problem, after the
war, we'd turn the error back on... but apparently some airports are
now relying on GPS for approach control, so turning that error back on
could have dire consequences.

The above bit is second hand, but if you like I could do some digging.

And as far as I know, US missiles rely on inertial guidance, not GPS.
There was a big flack about how you could rig a missile for GPS very
easily, but I do not think it is in use with our weapons systems.

Besides, even with a error of 100 meters, it is still orders of
mangitue better than a scud's accuracy, which is 95% it will hit
within about 1.5 square miles of the aiming point.

> ... all those who are intrested .... contact thier network ...

Before a host of ISPs start getting mail, it should be noted that the
procedure for starting a new newsgroup is clearly spelled out in the FAQs:
news.announce.newgroups: How_to_Create_a_New_Usenet_Newsgroup
alt.config: So_You_Want_to_Create_an_Alt_Newsgroup
These are regularly posted and are also available from:
ftp://rtfm.mit.edu/pub/usenet/news.announce.newusers

The procedure begins with an RFD (Request for Discussion), posted to
news.announce.newgroups, news.groups, and any other groups related to the
proposed topic. Once the discussion period is complete, a CFV (Call for
Votes) is issued and an independent judge tallys the result. Initiation
of an .alt group is somewhat simpler. In either case, the approved group is
activated by the sending of a newgroup message. The only involvement by
an ISP or SysAdmin is the reception of the message and updating their lists.

From what I understand, now GPS has the full sattelite pattern in orbit.
As such, information is now available almost instantaneously.

Accuracay of cilvilian GPS as not as good as the military. If so,
potential enemy nations could use GPS for targeting US sites, or those of
US allies. This difference in accuracy is not a great as it was in the
past, due to some improvements in the systems they use, but off enough to
prevent "pinpoint accuracy" for a hostile targeting system.

Percon and Grove sell freqs on CD-ROM. I don't know anything about the Grove product.

I bought the Percon CD-ROM a while ago. It's about $30. The interface and the search engine are very basic and not all what I hoped. In fact, after using the product for a while, it became apparent that if you really wanted to make good use of it, you have to dump the whole thing on to your hard drive and use a real database to get the info that you want.

I've also found several mistakes in the freqs that I've sorted, ranging from multiple entries with 0000 for the freq to misspellings of towns. I don't know if that was the way the info was supplied from the govt listings or it was keyed in that way by Percon.

Having the freqs on CD is certainly convenient, and the price is right, and that makes the Percon product worthwhile. It's caliber and quality need to be greatly improved, however, no matter the price. The sell another product that they say is better, at 5-6 times the price.

I started out using Word and then switched to Excel. With Excel I can export my data out to either of my two control programs. The programs use different formats but Excel's export function makes it quite painless. You also can customize your data to the way you like it and not the way the progammer figured you would like it. I have to agree that any spread sheet will work just fine.

Ok, yeah I know.......I broke two rules here. I'm posting a binary file to a non-binary newsgroup and another one that I don't know about yet.

I'm doing this for your safety. It is forbidden by LAW for you to listen to conversations held on cellphone channels. Well, if you don't know what the cellphone channels are you may very well find yourself in violation of the LAW!! And god knows how horrible it would be to wake up in a jail cell with an RF hangover and find that you've made new and strange friends with the local version of Jeff Dalmher!

So to save you from a fate worse than death here's a listing of the CellPhone channels in MicroSoft Excel format. If you don't have MS excel, you may have to find an Excel formet reader. (MS usually supplies this type of thing on thier website)

I received my Percon CD about a week ago. I find it to be very basic
and user UNfriendly.

If you perform a search (which it does very well) and display the
results to the screen, then there is no way to either print or save
the information. You must go back, redo the search (and remember
exactly how you searched) and then tell it to save it to a file or
print it.

I did some searches by lat/longitude and saved them only to go back
and realize I have entered the wrong coordinated. Although my fault,
I would have seen this if I could look at the results before
printing/saving them.

Do not get me wrong, this is an excellent deal for $30.00.

I just feel they should allow you to save or print what you see.

Seems to me the thing to do is use commas for a data interchange
format and then use a piece of software or whatever to format it
for presentation.

For example, the "CSV" (comma separated value) file format
shows up in more than a few places in PC applications.

Tabs can have different meaning and are not always 8 cols
apart, etc.. Plus, they can be hard to "see" in a file.

Works OK as a first stab, but the chances are good
that one would have to stick in a few tabs to clean it
up, especially if data in a column has varying length
as mentioned two paragraphs above.

Not a big deal and may be just fine for manual preparation
if no other pgm is handy.

I believe Phoenix AZ does this and some other major cities in the states.
I know here in Calgary it's planned for the next major upgrade (when
police go from 462mhz and fire go from 413mhz both to 800).

I believe it is called Automatic Vehicle Locator System, although that
acronym may involve more than just GPS and unit identification hardware.

Yes, they were fairly good shows excepting that one fact. But, theoretically, let's say that they did cover incidents out of their area. Technically, that would account for a mutual aid response these days. But, to assign a unit out of the area on a direct call isn't so unusual if the other units who normally are assigned coverage to the area are busy with other incidents. Happy Monitoring...Brian.i*

I just completed some correspondence with my ISP "America.Net" and got the skinny on starting a new group topic or subtopic of a group. He said that the process goes thru most of the other providers and it is voted on before they start a new topic. They say they need to make sure that there is no other group suited for the purpose and that they want to make sure it gets used. (Obviously, there are too many "Useless" groups out there). He said that they could easily start one on thier server only but may take years before everybody picks it up.

I would like to request all those who are intrested in seeing a "Freq" subgroup added to either alt.radio.scanner and/or rec.radio,scanner, to contact thier network and ask the newsgroup administrator to seriously consider the venture.

Let yourself be heard and let's try to make this group better than we found it. (Isn't that what we're supposed to do?) :)

Get a separate news reader program like Free Agent or Agent 99. I've used
AT&T's Netscape (or any netscape for that matter) and find that it's too slow to
work with compared to Free Agent.

There will be those that would disagree with me but to each his (or Her) own.

Roger

1583. RS 20-006 antenna problem

Newsgroup: rec.radio.scanner
Date: 1996-08-16 00:00:00 UTC
From: "L. G. Shirley" <lgshirley@mail.worldnet.att.net>
Message-ID: <4v0hvt$blk@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 226438

Hi Jason, let's see if we can repair your antenna rather than buy another one.

The center coil has 2 "threaded caps" on either end. If you disasemble one be careful, they glue them on. Gently grasp both caps w/pliers and gently unscrew one of them.

What may have happened to yours is the winding snapped off the base element. The plastic center piece simply slips over the elements above and below it. It has a "slot" and threads for the cap to secure it in place and there is a small brass stopper soldered onto the element to prevent the coil from moving once capped on. The coil is soldered onto the elements at the brass stop. You can remove the coil easy but you have to do this slowly and w/o a lot of pressure.

If the wire breaks, then use a razor or sandpaper and clean a 1/4" of it and then use a 25 or 40 watt iron to resolder it to the element. It happened to me the 1st time I took one apart but was easily resoldered. My guess is you can repair yours.

If you're saying that the elements came apart, well, that's a different story. They have two pieces of brass inside them and you can make a repair but I doubt that's the problem here.

Let me know if you repair it. It's very easy to do, even if you're not mechanically inclined, although that always helps make life easier. BTW, I've never heard of them being a problem and breaking. Although they are not flexible. They can be broke with a little pressure I'm sure.

Regards,
LGS

Nope, just the truth. That's all. SOS.

>What a lot of wasteful Bullshit you sent. That was an AMAZING waste of
>bandwidth. OF course you did your usual & sent ONLY the one side of
>the messages that you wanted to be shown.

No, I sent it ALL....except for THE warning that your SysOp laid on
you. But since you insist, OK, I will include that below, too. :-))

When one is accused of being a liar, there is no such thing as a waste
of bandwidth to set the record straight.

Man, I got truth running out of my pores around here. And I -=am=-
anxious to distribute some of it. All it takes is a word... :-))

>Bill, look at the dates you sent me the crap. Your warning was sent
>and BEFORE fido traffic could get them to me you fired off a 2nd
>warning.

You violated the rules three times. Sounds like a personal problem to
me. I can't help folks with personal problems.....just professional
ones. 'Sniff.......

>You are smart enough to know that fido traffic takes 2-3 days.

Again, that is a personal problem. However, I used DIRECT NETMAIL in
all cases, which eliminated ANY time delay. So your whine about the
time delay is unfounded and devoid of merit.

>The 3rd warning you sent to me was because I suggested to a fella
>I was talking to that we move to the cellular echo since we were
>talking about cellular issues. YOu then kicked me off for talking
>about another echo. But you seemed to missed putting that in here

================================================================
```

Soooooo, there we have it, old buddy, old pal, poor old mistreated,
misunderstood son-of-a-gun. Talking about time lags and delays, your
SysOp told you where the cow ate the cabbage on Jan 18, 1996. For the
record, follows is the header of my message that finally requested
your termination:

```
---------------------------------------------------------------------
Msg : #141 [393] Snt Imm Dir Pvt Cra
From : Bill Cheek 1:202/731 Wed 24 Jan 96 22:32
To : Bill George 1:105/40
Subj : Terminate John Mackey_Jr.
-2085-----------------------------------------------------------------
```

That was on Jan 24, almost a week after your SysOp whupped the good
words from the good book upon your earballs and eyedrums. Dang, dude,
I just don't know how to please you anymore. If you think I left any

other truths out, hell, just squaller, and I'll go see if I can dig 'em up. But geez, man, how else can I help ya?

Would a hanky help any? :-))

>Let's try to stop the off topic posts here. Wouldn't it be nice to come
>to this newsgroup and see nothing but related subject matter here?

I suppose. But it's not un-nice the way it is. Like, what's the
problem that can't be rectified by merciless and decisive use of the
<D>elete or <N>ext keys? The power of the computer is awesome.

>Here's an idea... when you come across an off topic post reply to the
>MAKER and not the group, that it isn't appreciated and would they kindly
>not post unrelated subject matter. If you wish to use stronger words
>that is up to you.

And......so......ADD to the problem, I take it?

> And you people that love to flame each other so everybody can read it
>could you try to keep it in one thread so the rest of us can ignore it a
>little easier.

Why is it so hard to ignore as it is? Just ignore it, if you want.
What the heck? Ain't nobody jerked a knot in your neck to where you
can't turn your head, right? Or broke your fingers to where they
can't peck the <D>elete key, right?

>Thank you for your mature understanding

Might it not be a bit more mature to just look down the queue for
those articles you WANT to read....and <D>elete the rest? That would
make it easier for you to not feel like a messiah and have it
incumbent on you to save the world from others.

Basically, I'm saying it's no big deal to exercise your own freedoms
and powers as you see fit, and leave it to others to exercise theirs
as they see fit. The thing you're not seeing here is that EVERYONE
DID it. And now you're exercising your freedoms and powers to try to
stop others from doing theirs.

You make it kind of confusing.....

if you killed the engine and the noise went away while rolling about
30mph then it is a motor problem not a speedo prob. which is what
kenneth said if I read him right. try looking a ign. it still could
be the prob. look for broken wires. had an install of a sterio that
had a noise and did not very with the rpm. turned out to be a cracked
wire.

>I'm not familiar with the newer cars, but the older ones , , , , Just

>twisting motion, remove the cable. Then you can apply some hi temp
>grease *spareingly*, reinsert tye cable and away you go.
haven't heard of this before interesting. will have to remember it.
but could you not given the room make a plastic funnel. flat sheet
that you twisted in to a funnel and taped to the upper end of the
speedo cable. then drip a lub in to the funnel and it will allow it
to go down the cable housing lubing the cable. I do this with my
motorcycle speedo and clutch cable.

>chargers, pulse chargers, reflex chargers...

Hey, Dan, you guys are different breed altogether. My sons used to
be into racing R/C cars. I watched 'em eat up NiCd pack after pack.
They didn't care. The whole idea was to get those cells recharged for
the next race. If the pack crapped out after a few races, it was no
big deal to them.

I think the moral here is that racing is one thing, where scanning,
especially in times of emergency or disaster, is quite a different
thing. We scannists have to employ slightly different techniques and
outlooks in order to have power available when we need it the most.

Heh heh heh..... you racing freaks are a whole different breed, for
sure. I've seen NiCd packs popped outa cars and chargers hot enough
to cook up a mess of scrambled eggs and still burn the hell outa your
hand if you touched 'em.

:-))

> Actually, there was ONE IMPORTANT thing left out of your qoute.
> The "NNTP-Posting-Host: ghansen@accessone.com"

Like I run a NNTP posting host.....OK.

BTW, since August 4th I haven't posted on any newsgroups from Accessone. I have a second ISP that I use now. You and your buddies should update your forged message database.

> This appears to be coming from Glenn Hansen of Tacoma, Washington.

To think at one time you told me you knew everything about compputers.

> His ham call is KB7PKC. He got restricted from posting on the
> newsgroup REC.RADIO.SWAP

Really?? Care to make a wager there John? Name the stakes? Back up your words now. How about $2000 dollars? Come on John you talk the talk but I don't ever see you walk the walk.

I have never been restricted from any newsgroup, period. Typical John lie. BTW, I have posted twice on there in the last four months through my Accesone account. Restricted. Liar!

> so then he had to obtain a news account
> thru zippo to access from his provider (accessone).

That really makes alot of sense. I use a remailer service to access my ISP. HUH?? How do you obtain an account to a usenet group John? How do you read newsgroups with a remailer John. Get a grip on reality.

> He made a
> lot of trouble on that newsgroup.

So says Saint John. Uh huh. The same John that got on my local repeater and started swearing and carrying on earlier this year. There are at least two other lurkers on this newsgroup that will back that up. I am sure very few would associate your name with trouble. Naw..no way.

> You are correct, he is a coward.

So says John who uses anon accounts to raise hell on the usenet. Yea, you are a REAL BIG MAN John. I can sure see that.

Not a coward John. I have been lurking as usual until you and your assumptions dragged me into it. You always protest too much about everything. I wonder why?

Take it to E-mail John. Is your fido account still active or did the cancel your access to that? Why not save the usenet posts for all the wonderful information you bring to the newsgroup.

Yeah, there's a lot of gray zone in that sort of thing.
But I'd sooner look at nice straight columns than I would
a bunch of funky commas.

Thing is, two or more tabs are frequently found between
columns where one bit of data is shorter than the one
above or below it. This wrecks the concept of an easy
transfer into a database.

So one can evolve a sort of a rule of thumb there....if
it's for presentation and little else, tabs are the way.
If it's for widespread dissemination for unknown ultimate
formats and destinations, then comma-delimited is probably
the best way. Even those who ultimately prefer tabs can
do a simple SEARCH & REPLACE commas for tabs and pretty
well be done with it.

Thus, I give about 50.5% to commas and 49.5% to tabs.
Arbitrarily and capriciously, of course. :-)

Does anyone know of a really simple and cheap POCSAG Encoder/Transitter that could be used for demonstrations? For example I am wondering if there is some PC software somewhere that generates signals on the serial port, and if there is a cheap FM transmitter that takes the signal and broadcasts it at a few milliWatts.

Actually... Yes, it happens all the time right here in this and the alt.radio.scanner group. I'm just suggesting that the posts go to a (sub) group of one of these and for those who are looking for freqs, lists, questions concerning them, would go there and ask.
I myself have answered probably 100 posts this year alone for freq lists, and have even asked for a few myself. While it's not an off-topic request to do so here, most of the users of these groups are looking for Technical expertise in the use, selection of, and modification of, scanners, antennas, computer control, ect.

>->->Sounds to me like you'll attract lots of people with the questions, and
>->->none of the people with the answers!

Maybe, maybe not, I'm willing to bet not. I've gotten 5 positive e-mails to every public post on this thread saying it's a good idea, so I'm persuing it. You don't have to if you don't wish to.

Thanks for your input.

: Since we are now able to tune in am/fm radio stations via internet
: through our computers, what are the chances of being able to listen to
: frequencies in LA or other parts of the country via internet. Anyone
: have any ideas to make this happen?

Yeah, that is something that is quite possible to do. There would
be alot of considerations that would have to go into it. For instance, the
rate at which the audio signal is sampled at would greatly affect audio
quality and transmission speed. The PC that is acting as the server would
have to be pretty fast. As soon as multiple users came online, the PC
would have a great demand to feed each independent network connection separately. The
network connection is another concern. Many 'audionet' sites require
a connection speed of 28.8. Imagine how big of a connection you would need
to drive even a few users. Performance would be greatly dependent on the
number of users using the network connection and the PC.

I dunno how audionet handles these problems, but I'm sure they charge
a decent fee to 'attempt' to solve these problems.

I wish I had the time and resources to play with this sort of stuff.
Can you imagine connecting to a web page, and being able to enter frequencies
and remotely tune the radio to any frequency? Listen to live police audio
from another city. Wow.

Keith

First off, let me say a mini-FAQ is looooong overdue, and I'm glad someone has taken the initiative to do it. Add these to your list.

1> Where can I find mods for scanners?
2> Where can I find FCC allocation tables?
3> Are there any web pages on ham radio/scanners?
4> What can I expect a frequency counter to do?

Definitely mention ftp at oak.oakland.edu in pub/hamradio. There have been plenty of lists put out. Although web pages come and go, if you list 20 of them, at least one will still be up, probably with links to othe rnew and valid pages. Definitely mention http://www.li.net/~j4dice/scanli.html. That's the address for Long Isalnd Scanning Resources. It has frequencies for almost every state, as well as aviation freqs, etc.

Although I'm fairly new myself, I might be able to provide some help in answering the questions as I've recently asked and gotten good responses for some of the popular requests.

Thanks for taking the time to put this together.
Keith

Yo! Scott:

Tuesday August 13 1996 08:52, Scott Hoffman wrote to All:

SH> I just bought a new antenna (which is meant for FM radio) but I
SH> use it for my scanner anyway and it seems to work pretty good.

Indeed, such an antenna ought to be functional for scanner frequencies over twice or more of the bandwidth for which it was intended, perhaps from about 50 MHz to 174 MHz, if you're lucky. It probably will not serve well at UHF, nor the VHF-Lo band.

SH> Although I am concerned about impedance mismatches and the fact
SH> that I might not be working my antenna to its full potential
SH> because if this.. My problem is... that the antanna comes with a
SH> 'built in' set of twin-lead cables (which is labled 300 Ohms)..

Ok, that probably means the antenna has a 300 ohm input impedance.

SH> My problem is how do I Interface 300 Ohms to 50 Ohms which most
SH> scanners use? I know that their are plenty of 300 --> 75 Ohm
SH> transformers which are used for TV's, but I have NEVER ever seen
SH> a 300 --> 50 Ohm transformer, does on even exist? where can I
SH> get one?

As far as I am aware, there are no commercially available 300-50 ohm baluns or matching transformers. I think you would have to wind your own, instructions for which can be found in the Radio Amateur's Handbook from ARRL.

SH> So what I'm using now is just a 300-->75 transofrmer and I'm
SH> inputting the 75 Ohm into my scanner.. Does feeding the 75 Ohm
SH> input into the 50 Ohm scanner input really make "that much" of a
SH> difference or is the difference pretty much minimul almost

SH> non-existant?

Minimal. The input impedance of the scanner is 50 ohms. By connecting a 75-ohm cable to the receiver, an SWR of 1.5 : 1 is created. THAT is very good for most communications applications. A 1.5 VSWR has a loss of 4% associated with it, for .17-dB, a minuscule, insignificant number, period.

At the other end, the 75-ohm cable finds a perfect match into the matching transformer (balun) where the impedance is transformed to 300-ohms at the feedpoint of the antenna. Now if the antenna's input impedance is 300 ohms, then there is another perfect match. This reduces the loss considerations to just two: the 4% loss we already talked about, and then the cable loss, which is so many dB per foot. The cable loss will be much more than the loss caused by a 1.5:1 VSWR.

SH> One last question.. Are antennas really 300 Ohms, I'm not sure I
SH> get this concept..

It is a difficult one. The input impedance of a dipole is 300 ohms. Many antennas, even though not dipoles, are based on the dipole design. Like TV antennas....an array of dipoles. Basically you don't know the impedance of an antenna unless it is stated by the manufacturer or you conform to standard designs in building your own.

Antenna impedance is a lumped parameter that is a composite of the antenna's capacitance, inductance, radiation efficiency, and physical resistance, and is beyond the scope of this forum to fully analyze. It is best to study it independently, and otherwise pretty much accept the manufacturer's specification.

No, not all antennas are 300 ohms. Discones are 50 ohms. Antennas expressly made for scanners are usually internally matched in some way to offer a 50 ohm input impedance. Whenever in doubt, check the manufacturer's specs.

SH> Couldnt I just splice my low-loss RG-8 50Ohm cable right onto the
SH> antenna without even using a 300-->75/50Ohm transofrmer?

Sure. You could. But that results in a 300/50 impedance ratio or an SWR of 6:1 for a much more serious loss of something like 67% or worse.

Soooo, your best bet is to use the lowest loss cable that you can afford or find, and then feed that cable between scanner and a matching transformer (if needed) at the antenna. In other words, find a way to fit an F connector onto the end of your RG-8 cable to mate with the matching transformer, OR..... disassemble the matching transformer, and fit a Type N female to it, and a Type N male on the end of the RG-8 coax.

Or....just use RG-6 satellite cable and be done with it.

I am looking for a source of cruise ship frequencies. I am going on a
7 day cruise on the Carnival Inspiration and would like to listen in on
ship to ship, harbormaster, ship to shore, etc. Any suggestions?
Thanks!
Bob Summers

>renamed STATION 51 in honor of the show.

Before MCA/Universal got out of the operation of "Yosemite Park &
Curry Company", the consessioner at Yosemite Park, sometime before
1990, the fire station in Yosemite Valley, which was a volunteer
department, mostly manned by YP&CC public safety employees (not by
the forest service) had Old #7 as their engine. Old #7 was really
old however, and was continiously suffering breakdowns. While my
sister was employed by YP&CC Public Safety, they retired the Old #7
to the back lot at Universal and brought in Engine 51. Barely fit
in the Yosemite Valley Firehouse garage.

>Ok.... lets see if anyone can answer how the pre-programed scanners "know"
>what frequencies to "scan"... is the information stored in an rom (eprom)
>or what?

Yes and yes. Hard-coded one way or the other. It would depend on the
scanner as to exactly how.

> Is is possible to change the information to add or expand
> frequencies?

Most likely not. The CPU's in scanners nowadays have enough ROM to
hold it all, and there's no way to "get in". If it were an external
PROM of some sort, and if you could "read" its organization, then
perhaps. But no one in their right mind would spend any time or
resources on such a project.

Those kinds of scanners are bargain-basement specials of low degree
and meant for the most casual grandmotherly scannist. No one of any
wherewithal would have one, much less get into it and mess around.

> > to mind)?
>

The city of Florissant, MO (suburb of St. Louis) just installed such a system. The news report I saw didn't mention GPS specifically, but did say things like "using satellites" etc. so I'm pretty sure that's what it is.

There's a display of all the streets, with the position of each unit displayed and updated real time. If I recall, the unit number is displayed next to each glyph, much like the air traffic control radars. I think the glyph also changes color to indicate whether the unit is in service, on a call, etc.

Using the system the dispatchers can indeed see which available unit is closest, instead of asking everyone where they are, or dispatching one car and having another call in saying "I'll take it, I'm closer..."

I'm sure it had some other bells and whistles, but the news report was a 45 second high level deal, no details. Perhaps someone else knows more?

I don't monitor Florissant PD so I don't know if the radio traffic has been cut down, but I imagine there's a lot less detail going over the radio (why report your location for a traffic stop, etc.?) Unless they're using pagers or in-vehicle computers (MDT's? is that the abbreviation?) they'll still need to give an address they're sending a car to though.

For Colorado give Scan Colorado! a try. It's written by Brian Gould
and updated about once a year. He's got EMS, Police, Fire, Aviation,
Military, Government, Railroad, News media, Amateur Radio and other
stuff all listed by freq. or aphabetically lsted so it's easy to use.
Scan Colorado! is at most news stands or you can get direct from him.
Email him at: rmedic@frii.com

I need some help regarding the AOR 2700 scanner. I just bought one of these from EEB and have been playing with it for about a day now. I have noticed that the sensitivity seems rather low. Particularly, this is noticable on the 400 Mhz police band. I compared it to my old Regency R4020, which is certainly not the most sensitive receiver on earth, and I could receive signals on the Regency that I could not receive on the AOR 2700. Is this particular to my radio or have others experienced such low sensitivity? Should I bother sending it back to be checked out?

I've often thought about that. I don't know of any in the South Jersey region. But think about it. A wall size map of a city with flashing police cars, engines, and BLS units showing their (almost) exact location. You'd be able to send the closest unit to a call for service all the time! Hmmmm.

But the show would get boring pretty quick if they only responded within
their
own district. How many places do you know of in an urban setting where
you can
have a rescue on the beach, in the mountains, on a farm in their own
district.
I don't want to keep watching them do the same thing over and over.

: :
: :Tom Swisher, N8GQK

: I was under the impression the most of the trunked systems have some sort
: of fallback, default mode that would allow communications to continue at a
: reduced level.

Actually they do, but the larger the system the more ineffective the Fail Soft functioning, since there are more users to go around on fewer channels. Also, when you knock out the microwave tower at the comm center, you cut the comm center off from the system, meaning no voice comms from the comm center until they can get emergency setups in operation.

Many cities have set systems up this way, with both main and backup controllers at the same location, usually the comm center. Take out the microwave system (and the waveguide/dish/tower assembly is the most vulnerable part), and the result is no main controller, no backup controller, and no voice comms from the comm center.

From: John Mackey KA0SSF <No-place@anywhere.org>
Message-ID: <3216B32F.48E9@anywhere.org>
Source record: 226197

This message is to all of the people that I've offended on this newsgroup.

I'm sorry that I've been such as ass. It's mainly because I have a drinking problem, and a drug problem, but I'm dealing with it. I get on the internet and post things that I regret the next day, but by then it's too late.

Let My post be a reminder to you what drinking and drugs can do to a person.

I'll probably get drunk and retract this someday, but for now, I just want to say that I'm sorry (and sober, for now).

The real John_Mackey KA0SSF

No, there was no "14" in the unit designations for Jon and Ponch. They were "7 Mary 3" and "7 Mary 4", respectively.

Well, along with "Code Red", you can put "LA Firefighters" in the category of crappy portrayals of firefighters and paramedics.

I wish my local cable company carried WWOR, as they're the only station running reruns of "Emergency!". BTW, videos of the show are avaiable from JEMS Publications.

CHANNEL - a place to store a frequency. If you have a 100 channel
scanner,
you can store 100 different frequencies.

BANK - the channels will be seperated into different banks. ie; my
scanner can store 200 frequencies in 10 different banks. (that's 20
channels per bank). I set bank 1 up with all my local police freqs
and bank 2 up with all my local fire, bank 4 sheriffs, etc..

BAND - this is the most important thing to look at. The radio spectrum
is divided into different bands. Before you buy a scanner, find out
what frequencies you are going to want to listen to. It won't do you
much good if your police is on 800Mhz and your scanner can't scan
that bank! Before you buy a scanner, visit your local Radio Shack
store and ask them for a police/fire radio frequencie listing.

The sportster is a good scanner and even more important, Uniden/Bearcat
is a good name.

Happy scanning!

and they have a DSS Freq hopper as well. Escort sell a DSS model with
Direct Sequence Spread Spectrum. No, you can't pick up either one on a
scanner.

RVS> This maybe an FAQ but, is it true that scanners, particularly mobile
RVS> ones are now illegal in the US??

Some States ban scanners in cars, but not that many, and they're mostly in the east. California has NO laws restricting possession and use of scanners (except for the Federal laws against scanning cellphone or cordless, or using a scanner during commission of a crime).

... Don't use a big word where a diminutive one will suffice.

1651. GPS in Police cars (was Funniest Dispatches)

Newsgroup: rec.radio.scanner
Date: 1996-08-17 00:00:00 UTC
From: Al Gillis <alg@teleport.com>
Message-ID: <32164240.30B9@teleport.com>
Source record: 226246
Cross-posted to: alt.radio.scanner,rec.radio.scanner

The City of Portland, Oregon police are using GPS for something
but I haven't determined the exact application yet.

Some of the newer patrol cars feature a small do-dad centered (left
to right) in the front portion of the roof. I checked one out one
day and saw in small letters "Trimble (Trumble?) Navigation". It
was a white plastic box looking thing about 4" square and 3/4" tall.
So that was the GPS antenna. Looking inside the car I saw nothing
unusual short of the radio and MDT. Nothing that looked like a
lat/long display or a CRT that could provide visual map data so I'd
guess the GPS is hooked in to the radio system (Motorola trunked) to
let dispatch know where they are.

If anyone else (in Portland or from Motorola) would like to add
details I'm sure we'd all like to hear and learn. (Yeah, like Motorola
sales people and techies will jump right in here and explain everything
to us all!!!)

Thanks!

IF they are on a telescoping antenna, they are only to keep the user from poking himself. Telescoping whip antennas, like car (AM/FM) antennas, aren't that scientifically designed.

Just for clarity, the GPS units cannot transmit, therefor they could
not relay location information directly anywhere. This would require
a different device, possibly getting data from a GPS and then
re-transmitting.

Mark

The truth as I perceive it to be.
Your perception will be different.

Meanwhile, on to scanners....

1665. BC3000 Priority Scan Problem

Newsgroup: rec.radio.scanner
Date: 1996-08-17 00:00:00 UTC
From: dber@tiac.com
Message-ID: <3215bef1.578370@news.tiac.net>
Source record: 226260

Hello,

I posted a message several months back on problems I've had with the Uniden BC3000 priority scan not working correctly under certain circumstances. I have received a few pieces of email confirming that others have seen the problem... my new question is...

Does anyone know of a fix or if Uniden is providing any sort of firmware upgrade to fix the priority scan problem some units seem to have? Has anyone else seen problems of these sorts with the BC3000XLT? Other than this problem, the BC3000 is a fantastic scanner!

Below is my original post.

I wonder if anyone else is seeing my "priority scan" problem with the Uniden BC3000XLT scanner (firmware rev USA 0.20):

I have the following Ham frequencies in banks 161-200

161 146.6400
162 146.6700
163 145.2300
164 145.2100
165 145.3100
166 147.9150
167 147.3600
168 146.7000
169 146.7750
170 147.3000
171 147.0300
172 147.0900
173 146.8950
174 147.1350
175 145.2500
176 146.8800
177 147.2100 P
178 146.9100
179 146.8500
180 146.9850
181 147.1500
182 147.2250
183 147.1800
184 145.1300

185 146.8650
186 145.4700
187 145.3500
188 146.8200
189 147.0150
190 145.3300
191 146.5050 P
192 000.0000
193 000.0000
194 000.0000
195 052.4200
196 053.8700
197 446.5750
198 444.7000
199 000.0000
200 000.0000

If I have priority set on 161 and 181 (defaults) then it works fine. If I have priority set on 162 and 181 it works fine, etc. But some combinations fail. If I have Priority set on 177 and 191 then I get the display to show bizarre search channels when it looks for priority activity. Sometimes I see it "search" 425, etc. It sometimes goes off forever looking for priority channels. Also, if I have priority on 161 and 191 then it will correctly detect priority on 161 but never on 191 even though banks 9 and 10 are selected for the scan. Seems like it really wants the priority channels to be first in each bank. Could anyone comment on this problem or if you have seen anything strange with priority searches with the BC3000. Although I realize it would take some time... could anyone program the above freqs into banks 9 and 10 to try this? I would greatly appreciate any help anyone could provide me in this matter.

Thanks in advance and take care,

Dave Bernazzani

kids
>at play.
>
> In the USA there are books written by Keitel and others
who have all the fed freq's chronicled and sells in most
larger scanner stores, HAM outlets and more...plus those
ads in Monitoring Times and others.

But the feds have really little use for the old freq's.
They operate on digital and encryption and more....so
what exactly is listen-in-able?

"go to location four and report back."
"go to the rear of the UC's car and take the position..."

"call mom for your lunch menu"....

"we are on the P street and have four blocks to go."

"we just passed the burger store and am headed for
the house with the whore".....

"we have just located the store and it is full of
the groceries on the list".....

now coming to you on the 400's freq's where they
do most of their talking now....

bill conduit
etc.

Basic as they might be, have you ever worked a 300-400 Mb file with a
real database manager? Some are faster than others, but still....

On the other hand, you can index the CD database and just keep the
index files on your hard drive. That would save some space..... :-(

>I've also found several mistakes in the freqs that I've sorted, ranging
>from multiple entries with 0000 for the freq to misspellings of towns. I

Ha ha ha ..... you think PerCon keyed those suckers in? Whoooooey,
NOT multi-million records. They just supply what the FCC gives them.
The FCC makes zillions of errors, but only the FCC can correct 'em.

>Having the freqs on CD is certainly convenient, and the price is right,
>and that makes the Percon product worthwhile. It's caliber and quality
>need to be greatly improved, however, no matter the price. The sell

How old is yours? Near as I can tell, 1995's and later use a better
engine and query format. I wasn't real excited about the older DOS
versions, but the Windows versions are cool.

Bzzzzzt. Wrong answer. Next, please. (I am always willing to
discuss anything by e-mail or netmail. ALWAYS..... Even with you,
except you hide and won't publish your e-mail address.

>> Private netmail was the ONLY way to discuss certain issues, and I
>> always encourage it. YOU did not attempt it, however.

>Bullshit again Bill. You REFUSED to respond, & finally you wrote my
>sysop & told him to tell me to stop sending you e-mail. Which is why
>you are afraid to write to me at my fidonet address now.

Bzzzzzt. Wrong answer. Next, please. I never refuse to respond by
private mail. And you are sadly incorrect about me writing your SysOp
on that count. I post/quoted here what I wrote. If you think
different, then YOU post/quote what I wrote and we'll get your SysOp,
Mr. George, to confirm or deny, eh? I've already been in touch with
him. :-)

Oh.....and your Fido address is cut off. Can't write to you there.

>Lying again Bill,

Bzzzzzt. Wrong answer. Next, please. No, Mr. Mackey, I do not lie,
except between about 2:00am-6:00am..

> several of us tried to talk to you but you would not respond to e-mail.

Bzzzzzt. Wrong answer. Next, please. THAT is untrue. I always
respond to e-mail and netmail.

> If it was brought up in the echo then you would kick them off.

Bzzzzzt. Wrong answer. Next, please. Nope. Flamers got booted.
Persistent violators of other rules got booted. That's all. But no
decent people were booted. Name one decent person who got the boot?
Besides, what's so bad about kicking people out of your living room
when they don't behave?

> DECENT PEOPLE, nearly everyone there now is an ass kisser and
> you still treat people like SHIT.

Bzzzzzt. Wrong answer. Next, please. Patently untrue. You're just still sore and smarting. :-))

> How about the way you handled John Kaose AFTER you said he would
> ONLY get a warning?

ARE YOU DENSE? He -=was=- warned. And he persisted. So he got the boot. Like you did. :-)) What the heck? You expect me to sit there and put up with HIM? Sheesh.....!!!!!!! Are you nuts?

> How about the way you treated Martin Niemeyer about the
> ribbon cable fiasco??

He was joining in with a known troublemaker on an issue that simply wasn't true. The troublemaker claimed the PRO-43 had ribbon cable in it. Niemeyer concurred. The PRO-43 does NOT have ribbon cable. :-))

Why? Do you THINK the PRO-43 uses ribbon cable? Personally, I think that matter is VERY important since if a neophyte bought off on that bit of imbecilic idiocy, he'd be apt to do some serious damage to his scanner, fumbling around looking for it. Lots of neophytes panic when things do go according to what they were told. Accuracy is VERY important in technology and most of the time, the FACTS override any "opinions".

>> I am a dealer in truth, old pal, old buddy, old friend.

>So far all you've shown me you deal in is manipulation & bullshit.

Has it ever dawned in your microcosmic consciousness that I might not give a flying fresh picked booger about what you see or think you see? What makes you think I am here to show YOU anything? Sheesh.... You are a very weird lad, methinks..... :-))

>How come you never responded to the guy who asked you what
>schools you went to?

Ain't any of his business. Or yours. Besides, there you go being dense again. I already stated that my alma mater(s) would not appreciate the dregs of Life crawling in with nonsense questions about one of their alumni. If you want to know bad enough, you can find out. Like it's easy to find out about your arrest record, fer instance. :-))

> You know, the guy that came in from YOUR BBS??

No? But who cares? What does that have to do with this forum?

Say, Mr. Mackey, do you KNOW what a scanner is?

Hi
I just bought a Pro-51 Hyper scan. form Radio Shack. It is a
programmable, 200 channel, which means you can enter many different
freq's into it. it also come's pre loaded with freq's already in it.
I own three different Radio Shack scanners and they have all held up.

Just heard STEALTH 01 (no points for guessing type) enroute the Burlington Airshow, presumably from the Batavia show in NNY on 282.7, having refueled from FUZZY (or is it FOZZY) 61. FUZZY's are KC-135's from NY ANG, Niagara Falls. STEALTH was also talking to NORAD HUNTRESS on 303.9 while enroute (don't shoot, my transponder just went for a dump ;=]

The main AR freq of 276.5 was in use by FUZZY 62, working TIGER 62 & 63, a couple of B-1's from Ellsworth, SD.

Now JAWS are setting up for some intercepts on 251.8.

Who are JAWS?

Also heard some pilots referring to what sounded like Falcon Axe, the MOA east of Watertown. Or is it ACCS? Don't know which.

The Greater Los Angeles area (several incorporated cities and many
many suburbs) is roughly 60 miles E-W and 40 miles N-S. Most of the
road scenes on CHiPs were shot in the NE corner of San Fernando
Valley during and just after construction of the Foothill Freeway
that goes from the city of San Fernando through Sunland-Tujunga
through La Crescenta to Glendale. One Adam Twelve road scenes were shot
mostly in the San Fernando Valley (pop. 1.5 million). Police Story road
scenes were closer to center city of L.A. and East Los Angeles (Boyle
Heights, the "Hollenbeck Division"). Location shooting here is a common
sight between spring and autumn. Lots of VHF traffic by location crews
using their own Motion Picture Service frequencies although it be brief
and filled with its own movie jargon.

VA>I've seen them as low as $99.

The Tropez is NOT a "frequency hopper," just digitized. A pulse code
modulated signal spreads out across the spectrum but is always
centered on its carrier frequency, therefore you hear the 'rushing'
noise on an FM or AM analogue receiver as the pulse train changes.
A frequency hopper (_true_ spread spectrum) can't be detected easily
unless you are listening on one of its hop frequencies. Even then,
you can mistake it for a static click.

RK>reasoning. You have helped though. Thanks, its also something else
RK>to think about!

I chanced to bump into a colleague during Friday's happy hour, said former colleague having worked in the automobile biz for some years. On asked about antennas having balls, he said it was more custom than anything else, to prevent damage to low ceilings and to prevent someone from using a removed whip as a sort of epee/foil for a weapon.

Makes no sense to say it is for "static charge/discharge" purposes since EVERY vehicle already has hundreds of sharp points on its various parts that are in the air flow. (air flow at the tremendous rate of 15 to 45 MPH average...heh)

Look at every scanner or other portable whip antenna tip. That tip allows the user to grab the end of the collapsed whip and extend it. No more, no less. Years ago I had one where the end ball came loose; the end of this whip was quite sharp.

Source record: 226284

Hi Brad,

My PRO-43 keypad started to cause problems in that it wouldn't always work when I pressed certain keys.

I replace the pad with what the service manual calls the: "key, top" in its parts listing.

I can't remember the price, probably around $12. The 39 and 43 are twins to a point so I'd look in your service manual for disassembly/exploded view of the scanner. That will point you to the part number to order.

Hope this helps.

Regards,
LGS

Heard this just last week here in Ontario:

Dispatcher, paging volunteer firefighters: "Station X, respond to a house fire. Go north three miles on County Road 3, turn left at the dirt road beside the river, the house is on the left"

(A few minutes later)

Engine 1: "Engine One to Dispatch, we're turning onto the dirt road, there are several houses here, which house did you say it was?"

Dispatcher: "The one that's on fire. It should be on your left"

A "band" is a range of frequencies that the unit is capable of
recieving. The transmisions you're trying to monitor must be
broadcast on a frequency that is within a band the scanner can
recieve, or you're SOL.
A "channel" is a memory location in the scanner where you can place a
frequency you want to monitor. For ease of use, these are often
broken into "banks" wich is a group of channels that can be turned
on/off independant of the other banks.
I would be surprised if there are only 30 frequencies in use in a
jurisdiction the size you're describing. I suggest doing further
research into what's in use. Don't forget you'll want to be able to
hear everything from the local low-power stuff (fireground as an
example), to the area FBI office.

Look for a scanner with no less than 100 channels.

Mark

The truth as I perceive it to be.
Your perception will be different.

Toby,
Look under the aerodynamic air dam on the tops of our nations
largest truck company's tractors. You'll see a half-dome device with a
coax cable coming out. This is a GPS receiver (SAT-TRACKER) system to
report truck positions to the dispatcher (not sure of the method of
reporting, though). Ask a trucker the next time you happen upon one at
a turnpike plaza.

I'm a reporter covering 14 towns and three cities in New Hampshire. We have to equip ourselves, and I'm looking to buy a simple portable police scanner that (hopefully) would be able to scan those frequencies.

But all of the ads seem a little confusing. For example, in the summer Damark catalog they have an ad for a "30 channel handheld scanner" with "10-band coverage of police, fire, public service, military and more." Plus, five user-programmabel search bands. ... Another, more expensive Sportcat sanner offers 100 channels and 12 bands.

Pardon my ignorance, but what's the difference between a channel and a band? What exactly are they? I guess I'm simply looking for something that will simply scan about 30 or so emergency frequencies and let me know when soemthing is going on. What should I be looking for? And is there any models I should be looking at, or avoiding?

Thanks!

1707. To all: DEA information

Newsgroup: rec.radio.scanner
Date: 1996-08-17 00:00:00 UTC
From: "L. G. Shirley" <lgshirley@mail.worldnet.att.net>
Message-ID: <4v37hh$74a@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 226302

Hello and welcome back to the scanning once again being discussed on rec.radio.scanner.

I've noticed a lot more postings about freq information requests of late. And I've no doubt there is a lot of info out there in this group.

Someone had asked me about federal freq's recently and I replied to his request as best as I could. Another individual was able to better answer his question since he had info about the particular state in question and that gave me an idea.

I'd like to compile some info on the use of DEA radios, by state, from someone in every state. My main intent is to simply ascertain the band the DEA is using in each state.

There seems to be conflicting info in some of the federal directories on the market and with time the data will also become outdated. I've seen some posts on band usage so I know people are monitoring.

If you do not feel confortable posting something but still would like to share your interests, you can E-mail me. Anything I receive will be considered confidential. Nothing will be posted w/o your permission. ALL personal info on my computer is encrypted (w/o Clinton's Clipper chip thank you). The type of info I would not want to be found in possession of is stored on a disk with a 3rd party, no one will find it, ever.

I simply would like to see the band usage, VHF, UHF, trunked? If you want to post freq's actually used, thanks fine too. Just think about what you're posting before you post it, then think again. Once it's on the board, it's there forever, for everyone to see.

I'll compile the data and repost (only what you allow me to) the info as a complete list, band, freq, whatever you think might be of interest to others.

There are a lot of new scannists and perhaps some seasoned ones who don't know everything about federal monitoring, this would help them and in return put a little more quality in our hobby group.

I've written for NorthEast Scanning News (now The Scanner Club) since March of '90 and have received some very interesting information in the mail. I know there are others willing to share. I always kept my word in not revealing info that I was instructed to not reveal. I want to over emphasize that. But many times some very good info came in for sharing.

I'd like to see if this group is another source of like minded people. I'm new to the Net (2 months) and don't really know what the potential is with

this group. I do know it's almost the weekend and there should be a lot of people reading the mail. Good time to make a request,

What do you say? With RCMA and other publications either down and out or certainly hurting, can the Net be the future of scanning or is it dying as some have said in their posts?

Regards,
Lou Shirley (LGS)

Spent a couple of days there in July. Williamsburg police were busy on 460.050. Never listened to the FD but they're supposed to be on 154.145 (Dis) and 154.445 (Fireground). Heard Busch Gardens activity on one or more of the following: 463.425, .775, .575, .225, 464.175 and 154.57. Colonial Williamsburg has the following listings but I never confirmed these: 151.775 (paging), 452.750 (transportation), 463.625 (security), 463.900 (maintenance) and 463.3375 (operations). Good luck.

>cars stop reporting their locations, (and various other questions come
>to mind)?

I actually think that the FD in my area (Glen Burnie, MD) does use GPS or some other nav, (LoRaN maybe??) in their units... a sample call from the dispatcher follows:

Medical Box 13, Engine 3, Paramedic 3 respond to xxx for cardiac, coordinates 14H9, respond on echo...

now medical box xx describes the call, engine/paramedic describes units responding, respond to xxx is an address and some visual markings, like a cross street or such, and respond on echo, echo is a tactical channel; but I have NO idea what the coordinates are... I have seen others like 9B14 and 12I3, so it's anybody's guess... I thought it might be GPS or LoRaN because our plane has Loran-C and you punch in similar coordinates for runways to land on... extremely accurate system...

I haven't been there in years but York County fire was on 154.40, James City County fire was on 154.355, and Newport News fire was 154.13. I am not aware of any scanner laws in the state, however Radar Detectors are illegal and the Virginia State Police were rumored to have radar detector detectors.

Derek:

Quit thinking singularity. You will defeat your purpose. I am
in the video news gathering business and have the experiences to
back up what I am abaout to tell you. If you think One Scanner,
the problems you will get into will defeat your purpose.

For one thing....breaking news don't appreciate your concerns for
simplicity. Being able to hear is being ready to get exactly
the best info you can all the time....not when the over-programmed
scanner comes back or sticks to another agency.

You will want to get a minimum of two scanners. One for police
and the other for fire and rescue and ems and such....

Get the 100 channel scanners....with ten banks. Banks are the
amound of sections in the scan area...you get to put ten in
bank one and ten freq's in bank two and ten in bank three and
so on. Get the 100 channel ones from Regency or Un/Bcat...I
prefer the BC 760xlt or the Radio Shack Pro 2026...excellent
scan-sensitivity. If youi don't need 800...check to see if
any medical are on 800 or 900 freq's...very important you get
EMS....

I have four scanners installed in my Jeep. One for fire, one
for police, one for CHP (Highway Patrol) and one for repeats.
That means I have every channel installed: a 200 channel unit.
I use this one for when I need to listen to one of the others
all the time and allow the scanner to listen to one bank with
other freq's that help me understand what is going on...like
900 freq. EMS.....Justd listen to EMS on this one..plus
Search and Rescue, Diving, Coast Guard...ones that don't talk
much , but then they do, it's usually a popper...this way nothing
else gets in my way....,

So you need 30 channels...say 50. There are some you probably
have not even thought of listening to....

What you do is this:
Fire Scanner Police Scanner
maybe three channels...dispatch Is it PD, Sheriff,state
plus mutual aid or a combo of
plus a tac channel Mutual Aid channels
plus divers car to car
plus ems Dist Attorney
Outside Help freq.
State Mutual Aid
Feds(DOJ,FBI,SS,Customs

what you want to do is program into those banks justd one city at
time....ten channels for City 1, ten for city 2, ten for city 3
and towns in four , five etc.

Each city/town has its own bank...This way when you listen you
will hear it all, but when it comes time to "zero in" you just
listen to that bank where news is going on you are going to
cover....One scanner for Police and One for fire...a must.

You want to double program EMS and Divers into both...but if I
were doing it, EMS and like would be the third scanner...very
important this be separate.

What you want to do now is this: you want to get professional
and program those banks with anything that affects that city or
town....One city, One bank.... One town, one bank. No matter
how few. If I am right, most of your city/towns or just towns
operate on same police adn fire channels....But you need to be
able to listen to fire and police at same time, plus EMS.

then when you find other freq's to listen to, they go to police
or fire scanner....

100 channels is essential...don't pinch pennies and go with one.
If you have state police and highway patrol, this is a thing a
16 channel scanner can do. I put my ChP freq's in a 16 channel
unit in my Jeep. I have two 100's, one 16 and one 200.

I cover an area of several counties....many cities. so buy
two minimum...and get a used 16 channel for 40 bucks or so.
Mine is the Bearcat... 400. The bearcat 960 is a good one too.
If you can find a turbo-scanner from radio shack or regency, get
it. Get the models here because they fit into the car easy.

You can install them easy, put them all on one scanner antennae
using a signal splicer that allows three scanners to operate off
one antenna....e . I have such a hook up. My 800 unit
runs off an internal antennea that is fastened near the passenger
door .... with 800 units you get better reception on the
150 and 488's and allows you to jump into 800/900

right away....

Grove Enterprises sells discounted scanners
Scanner World does too....
I think those units Damark is selling uyou get a better
price from the two above....i'll look in my catalogue

Get back to me if you need other help.

remember: two minimum. No ifs or buts....make it two.
but three is better....

bill conduit
bay cities video group

REAL TV will be a new show on t.v. this fall. They will be using
my Berkeley Hostage Shooting at the Durant Hotel on their airing
nationwide....I had two scanners going on this one...while I
raced to the scene...police/fire going at same time... anyway...the
video will be aired again on RealTV this fall....scanners got it for
me.

There MIGHT be state rules on that; you might want to check in the
newsgroup rec.radio.scanner.

You know that it is illegal to import a scanner which can receive the
cellular telephone bands. (although I understand that most of them can,
de facto, if not de jure, receive the cellular bands due to image
problems)

I'll put this message in rec.radio.scanner also with r.r.scanner only set
for follow-up.

Don't go there Billie !!!
You had better be able to supply proof. "It has their fingerprints all
over it...". What fingerprints ???
I have posted to this newsgroup ONCE with a scanner related message
since joining my new provider after my 2 week vacation.
No backdoor aliases or underhanded face slapping here...I'll shovel it
direct and involve nobody else if you prefer to keep the "war" going.

BTW...just for the record, your attempt to disturb the administrators
at the College (my previous server) were successful but not for any
reasons pertaining to the topic of your communication with them...it
only woke them up to my (unknowingly) unqualified access to the
system. They were content with "my side of the story" after seeing
some of YOUR posts. (I wonder how much time,effort and money you spent
on THAT endeavor :)
Anyhow, my new account is with a commercial ISP and I don't suppose
they don't give a flying hoot about mud flinging in the newsgroups
so...

A quick comment about your continued labelling of this group as
"Anarchaeic". It's only anarchy when YOU continue to respond to the
mostly silliness of late. (Just one of those people who 'gotta' have
the last say, eh ?!) No anarchy or dictatorships over here when you
aren't around.

For the benefit of all others here on the newsgroup I'm not breathing
anymore fire...why don't you follow suit and let it die !?

None of which is current or relevant any more. Any
government (or wealthy terrorist organization or drug
cartel) that wants military precision can obtain the US
military's technology for the right price. It's not that
secure. Besides, civilians can now get "corrected" GPS
information the same way the Coast Guard and other agencies
get it - using DGPS in areas where the correction signal is
piggybacked via subcarrier on a commercial FM broadcast
station or other high-power continuous transmitter.

The military's anal use of induced inaccuracy in a
global navigation system is simply a costly waste of
resources and does nothing for national security.

It may be map coordinates. Here we use maps and have a series of 3600 map
pages that cover the entire city. Each is 1 mile square (area
covered.. not the actual map :)) and is internally gridded ranging from A to
G on one side and 1 to 7 on the bottom. We will get a call that is referenced
to "Map 247E7" or "Map 2161E3" or "Map 14B5".

People do use spreadsheets for data managers, and they do work well.
Up to a point. Even the most powerful will accept only so many lines,
and the more you have, the slower it runs. You're also limited with
respect to querying the sheet, but.....

So long as you have a few hundred freqs or less, I would guess that it
doesn't matter and whatever is more comfortable is maybe "best".

Get more than a few hundred freqs, though, and you'll be sucking rocks
with a spreadsheet. That's where database managers take over. Many
can manage up to 2-billion records. Not that you'd want to..... :)

believes that the scout is defective. I am not sure if it really is
broken or if it is the normal function. He said that it is supposed to
display some sort of test frequency. Bottom line is I told him to send
it back to Optoelectronics and have it fixed and I would pay for it. I
will post the results. It says on the opto web site that the warranty

covers everything except damage from excessive voltage when charging batteries and excessive signal overload. It just makes me wonder how delicate these things are. Maybe the thing can be damaged from hooking it up to say a good mobile antenna and then passing by a tower with strong signals.

Yes I agree, , , I think that it is VERY unprofesionally done and
difficult to use. There are mistakes, and it's cumbersome, and
difficult to print out a list on anything less that 927 character
width :-{ Having said all that, I still find it a valuable tool.

I bought the Radio Shack counter. I've used it at remote repeater
sites, and am able to catch ALL the frequencies from over a hundred
antennas at about 50 feet away. It works GREAT! Remember, these
things are only good for NEAR FIELD work. At first I thought I'd made
a mistake buying the RS machine, but after learning it's intricacies,
I love it :-}

1734. BC3000 Priority Scan Problem

Newsgroup: rec.radio.scanner
Date: 1996-08-17 00:00:00 UTC
From: dber@tiac.com
Message-ID: <32153170.2419101@news.tiac.net>
Source record: 226329

Hello,

I posted a message several months back on problems I've had with the Uniden BC3000 priority scan not working correctly under certain circumstances. I have received a few pieces of email confirming that others have seen the problem... my new question is...

Does anyone know of a fix or if Uniden is providing any sort of firmware upgrade to fix the priority scan problem some units seem to have? Has anyone else seen problems of these sorts with the BC3000XLT? Other than this problem, the BC3000 is a fantastic scanner!

Below is my original post.

I wonder if anyone else is seeing my "priority scan" problem with the Uniden BC3000XLT scanner (firmware rev USA 0.20):

I have the following Ham frequencies in banks 161-200

161 146.6400
162 146.6700
163 145.2300
164 145.2100
165 145.3100
166 147.9150
167 147.3600
168 146.7000
169 146.7750
170 147.3000
171 147.0300
172 147.0900
173 146.8950
174 147.1350
175 145.2500
176 146.8800
177 147.2100 P
178 146.9100
179 146.8500
180 146.9850
181 147.1500
182 147.2250
183 147.1800
184 145.1300

185 146.8650
186 145.4700
187 145.3500
188 146.8200
189 147.0150
190 145.3300
191 146.5050 P
192 000.0000
193 000.0000
194 000.0000
195 052.4200
196 053.8700
197 446.5750
198 444.7000
199 000.0000
200 000.0000

If I have priority set on 161 and 181 (defaults) then it works fine. If I have priority set on 162 and 181 it works fine, etc. But some combinations fail. If I have Priority set on 177 and 191 then I get the display to show bizarre search channels when it looks for priority activity. Sometimes I see it "search" 425, etc. It sometimes goes off forever looking for priority channels. Also, if I have priority on 161 and 191 then it will correctly detect priority on 161 but never on 191 even though banks 9 and 10 are selected for the scan. Seems like it really wants the priority channels to be first in each bank. Could anyone comment on this problem or if you have seen anything strange with priority searches with the BC3000. Although I realize it would take some time... could anyone program the above freqs into banks 9 and 10 to try this? I would greatly appreciate any help anyone could provide me in this matter.

Thanks in advance and take care,

Dave Bernazzani

1735. Re: bincancel:21 large binaries:AR556:@@NCM

Newsgroup: rec.radio.scanner
Date: 1996-08-17 00:00:00 UTC
From: red@redpoll.mrfs.oh.us
Message-ID: <ARMM-Report-556.a@redpoll.mrfs.oh.us>
Source record: 226330
Cross-posted to: alt.retromod,alt.radio.scanner,biz.marketplace.international,rec.birds,rec.food.veg,rec.radio.scanner,rec.travel.marketplace,sci.geo.geology

Large binary posts do not belong in unmoderated discussion groups.

I run a program that searches for, and issues advisory cancels for,
large binaries in the akr, biz, comp, misc, news, rec, and sci
hierarchies.

I have issued 21 cancels for large binary files (average size 93,519.2
characters - total size 1,963,903 characters) posted to 6 different
unmoderated discussion groups in the biz, rec, and sci hierarchies
(with cross-posts into alt groups) as follows:
16 rec.birds
1 sci.geo.geology
1 rec.travel.marketplace
1 rec.food.veg
1 biz.marketplace.international
1 alt.radio.scanner
rec.radio.scanner

The cancels in non-targeted groups are a consequence of the way
cross-posts work. A cross-posted article has only one Message-ID.
When it is canceled from one group it is canceled from all groups.

This pointer is being posted to each affected group listed above.
Follow-ups are directed to news.admin.net-abuse.misc.

If you want to see exactly which file was deleted from a particular
group, read the full report in news.admin.net-abuse.announce. The
full report can also be found in alt.nocem.misc and alt.retromod.
Look for AR556 in the subject, or, if your reader supports it, use
this <URL:news:ARMM-Report-556@redpoll.mrfs.oh.us>

The criteria used to search for this batch of large binaries were:
NEWSGROUPS: Unmoderated akr, biz, comp, misc, news, rec, or sci
(except for comp.binaries.apple2, comp.bugs.2bsd,
and rec.games.bolo)
BINARY: base64, binhex, uuencode, and xbtoa encoded files, etc.
SIZE: > 100,000 characters [(size * (# of parts - .5)), if multi-part]

If you must post a binary to Usenet, please post it *only* to an
appropriate binaries newsgroup such as alt.binaries.misc, and do *not*
crosspost it to non-binaries groups. Then, if you like, post something
in the appropriate discussion group telling people where to find the
binary in the binaries group (a pointer to the binary). This will
permit news administrators and users to decide for themselves whether

to receive the binary files.

For more information about binary cancels, see the bincancel FAQ,
<URL:http://uptown.turnpike.net/~Geniac/ckn/binfaq.html>

Please direct public feedback to news.admin.net-abuse.misc and private
feedback to red@redpoll.mrfs.oh.us. Thanks.

Best wishes,
Dick

1738. FAQ:Alt.radio.scanner vs Rec.radio.scanner

Newsgroup: rec.radio.scanner
Date: 1996-08-17 00:00:00 UTC
From: crs1026@inforamp.net
Message-ID: <4v5d1t$giu@news.inforamp.net>
Source record: 226333
Cross-posted to: alt.radio.scanner,rec.radio.scanner

FREQUENTLY ASKED QUESTIONS (FAQ)
What is the purpose of alt.radio.scanner versus rec.radio.scanner?
Posted to: alt.radio.scanner, rec.radio.scanner

Many people have noted that there are two usenet groups for scanners: alt.radio.scanner, and rec.radio.scanner. The names of the two groups are identical, so it's hard to tell them apart. This FAQ is intended to help remove the confusion,and promote a rational use of the two newsgroups.

Question: Where did these groups come from?

Alt.radio.scanner was the original usenet newsgroup dealing with scanner radios. In 1993, rec.radio.scanner was created, in recognition that scanner radio is a serious hobby and deserves its own place in the ''big seven' newsgroup hierarchy. At the time, it was expected that discussion would migrate to the rec. newsgroup, and the alt. group would disappear. Unfortunately, this hasn't happened, and both groups remain active.

Question: Why doesn't someone just eliminate alt.radio.scanner?

Unlike the 'big seven' newsgroup hierarchies, the alt. hierarchy does not have an official mechanism for removing newsgroups. Typically, alt. groups only disappear when news administrators note that they are not being used. Even then, there are people who delight in trying to revive alt. groups. So long as people continue to use it, most news administrators will retain alt.radio.scanner, even if it makes no logical sense to have a duplicate newsgroup. There is simply no way to force users to move to a single rec. newsgroup.

Question: So what is appropriate for each group?

There is no official answer, but a good guideline would be, USE THE REC. NEWSGROUP EXCLUSIVELY unless the topicwould be excessively controversial or risque in a 'conventional' big-seven newsgroup. Radio is pretty tame stuff by usenet standards, so this guideline may seem trivial. However, in some countries it's illegal to posess or modify radio equipment for certain frequencies, or to actually monitor or divulge some types of radio transmissions (like cellphones, hint, hint). Some news administrators are uncomfortable carrying newsgroups whose content is illegal in that locale. So it might be helpful to keep this kind of discussion in the alt. hierarchy where there is a wider latitude given to content.

Question: Is cross-posting appropriate?

No one can prevent it. But it does inconvenience those who pay by the unit for their connect time, and it wastes bandwidth, so ultimately it harms us all. If all users post to the two newsgroups in a consistent manner, cross-posting will not increase your audience.

Question: Is putting everything in one rec. newsgroup the best way to manage discussion?

Good question. To this point, no one has formally submitted a proposal to subdivide rec.radio.scanner. However, the rules of usenet do allow individuals to submit proposals, to be voted on by all users. If you want more information on how to do this, please refer to "How to Create a New Usenet Newsgroup" and "How to Format and Submit a New Group Proposal", available in news.announce.newgroups.

Comments and suggested revisions to this FAQ are welcomed.

I have the "Mr Scanner FCC Frequency Database" it has all the frequencies on it but an absolutely useless search engine. Most of the info seems to be in .DBF (Dbase) format but for example you can search for freqs by State, City, County, Service such as PP for Police. But it would be nice if it could narrow it more than that. Its put out by Norm Schrein who does great with his frequency lists. Does anyone know of a database that might be able to sort this info a little. I tried loading just the Ohio, Pa stuff in Dbase to try to at least organize it by frequency, but it alone was over 300,000 records and that was too much for my 486x100 time wise. There used to be a shareware freq database called FCCbase or something like that that if I recall correctly, used DBF format files. Anyone know of it?

Jack.

I always liked Emergency. It was what got me interested in the field of EMS and fire fighting when I was a kid. The show was the best at showing what EMS is really like. There were a few stupid things in the show, like getting to a call in an aother part of L.A. and arriving in 30 seconds. Or the siren on squad 51 being a different one during the same show. Or using the "paddles" to shock at paitent while everyone in the crew is standing in a puddle of water. I also have been watching the shows again on WWOR. I noticed something about the head nurse Dixie, she never does anything medical on the show. She just talks. Whats the deal?

Derek,
Channels are just another name for frequencies. Your local, county, and state police probably use several frequencies (or channels) each. "Bands" are ranges of frequencies. You can think of the AM broadcast selection in your car radio as a "band." It covers from 540 kilohertz to 1600 kilohertz. A "kilohertz" (or kHz) is the same as saying a thousand cycles per second. The FM section of your car radio covers from 88 to 108 megahertz (MHz--or _million_ cycles per second). So, the AM and FM sections of your car radios are "bands."
Police, fire, and other non-broadcast services also use "bands," theirs covering different ranges of frequencies. "Low" band usually refers to 30-50 MHz, "High" band from 150-173 MHz, and "UHF" band from 406-512 MHz.
Most even "cheapie" scanners will cover those bands. Additional popular bands are the aviation band (108-136 MHz), where you can hear airplanes talking to towers and en-route controllers; the ham radio bands (there are several, 144-148 MHz, 220-225 MHz, and 430-450 MHz are some popular ones), and the new 800-MHz police/fire band (750-900 MHz).
I may have botched a few of the band limits, but you get the idea.
My advice: Go to your local Radio Shack and tell the nice guy behind the counter that you want to listen to local police, fire, and medical traffic. The bands you'll need to monitor depend on where your local services have been set up. In some communities, local police is on low band, in others it's on high band, in others it's on UHF, and in many communities it's now on the 800 MHz band. I suspect the folks at your local store can tell you.
As for buying more than one scanner, I think only you can decide if you need that. If you only want to be alerted to what's happening, I suspect one will do. If you want to show up at the scene (being careful not to impede what's going on) and listen, you may want more than one.
As for features, it is useful to get a scanner with "banks" of frequencies. You might want to load all your police frequencies into one "bank," all the fire freqs into another, and so on. You can then toggle the "banks" off or on, and only scan the services you want to listen to at a particular time. Other people set up "banks" by community. They'll put all Happyville services (fire, police, ambulance) in one "bank," Muddville in another, and Metrolis in still another. You can do it either way.
Depending on your locale, the number of channels may or may not be critical. I'd not get anything less than 100 channels myself, but I kinda like scanning the aviation frequencies (that's a dozen right there, here in Honolulu), police (about 20), fire (about 10), and my local ham repeaters (20 or so). It adds up quickly.

Also, think about portability. Hand-helds are nice if you will be up and around, but their performance (particularly in sound quality) is often poorer than a desk-top (or under-the-dashboard) larger scanner.
And don't forget antenna considerations. If you are in your car, get a good mobile scanning antenna that mounts on your roof (magnetic mounts are nice). If you've chosen a pocket scanner, you can plug that mobile antenna into the radio with an adapter. The little rubber flexible antennas that come with the portable scanners are pretty poor. That won't matter if you're right near the action, but you won't be able to hear some stuff as well as you would with an outside antenna. And if you are listening from the home or your office, an outside antenna makes a BIG difference. I like discone antennas; they can receive from all angles and cover all bands. They run about $60 or so. You'll need some coaxial cable to run the antenna into your house, too.
And don't forget about power. Pocket scanners are nice, but they do eat batteries. You can get rechargeable ones, but they generally don't last as long per charge as do alkaline batteries.
You'll hear lots of opinions on brand names. My view is that the Radio Shack scanners are very good and reasonably well priced. There are perhaps marginally better ones and probably some slightly better deals to be had, but the convenience of having the local dealer on hand to help you is worth something to a lot of folks, and Radio Shack has good service (usually) and a national image to uphold. And I like to help local merchants. Other good brands are Bearcat and Uniden. They are available at discount stores. You might want to drop in to Radio SHack and see what happens to be on sale at the time, and see if it meets your needs.
My favorite scanner (desktop) of ALL time is my Radio Shack PRO-2006. I've used it in my car and at home for many years and I wouldn't sell it for anything (well, MAYBE some things). It's no longer available, but there are present incarnations of it for about $350 or so. That's at the high end. The Radio Shack hand-held scanners are very good too, and they are usually cheaper. I don't think you will regret getting any of their products.
I hope this helps (and I hope I didn't build you a watch when you asked what time it was). Let me know if I can clear up any confusion I no doubt caused.

Source record: 226339

About 10PM last night I clicked on my bookmark for the Federal Gov't and then selected, by random, the Dept of Justice.

http://justice2.usdoj.gov/

SURPRISE!!!!!!!!!! Someone had made a few changes, For one it is now called the Department of Injustice. You are immediately greeted by the Nazi swastika all over your screen's background.

A flag w/the symbol is apparent. George Washington's picture is captioned with his words, "Move my grave to a free country! This rolling is making me an insomniac".

Janet Reno's portrait has been replaced by Hitler's. And a flag now bears the Nazi symbol. She is now called Attorney General Furher.

There is plenty of nudity and the many links will take you to places you may never have been before. I don't think we're in Kansas anymore Toto!

I have no clues how it was done or when. My guess is someone changed all the links to the DOJ page to another one, the one you see when you click on the DOJ's homepage.

I worked today and when I came home and tried to get back to the DOJ's page, no luck. Must be a major overload <grin> of people trying to get to the link of women clad in, well, next to nothing and tied with rope!

I don't think the author will make any brownie points w/women. He hacked the homepage they have w/the DOJ on violence against women. I'm not condoning such action and violence is a very serious issue but whoever did the hack was also very serious.

He changed a Clinton speech on affirmative action and insulted blacks with his choice of words. There is a lot of rambling about the internet and the Gov't taking away our rights on it.

The author has a interesting slant on things. This should be enough of a warning if you're easily offended by racism, hate, foul language, porn on the net, and general crudeness. Don't go there.

I would like to know just how this was done, any ideas? Is it that easy to hack someones homepage?

I wonder how long it'll be before this homepage link is removed and can they find who did the evil deed? Two months on the Net and just when I think I'd seen it all, wow.

1745. WTB: Scanner with Serial Port

Newsgroup: rec.radio.scanner
Date: 1996-08-17 00:00:00 UTC
From: RtwoDtwo - John <rtwodtwo@pws.net>
Message-ID: <4v3m9t$nij@falcon.ns.net>

You should be fine in Oregon, Washington, & California (unless some
county
has a local law against scanners.

There is no national law against scanners, but it is now illegal to
monitor
cellular phone conversations.

Have a nice trip & happy scanning.

Bob, I don't have your E-mail address, so I'm posting this & hoping you'll see it. A few days ago you E-mailed me concerning my audio problems with my PRO-43. You mentioned the weak speaker in older versions & that rang a bell for me. I plugged a set of headphones in the jack & the audio was fine! I checked the service manual & the schematic showed the headphone jack & speaker in parallel, so I'll be ordering a new speaker from National parts Monday. Thanks for the tip; It'll save me the time & cost of shipping it out for repair.

I can't speak for Portland or Motorola, but what you saw was probably
the entire system.

Since many GPS recievers are already equiped to send data direct to a
PC, which is essentially what a MDT is, it should be a fairly simple
matter for the MDT to transmit location information to dispatch from
the GPS reciever. There wouldn't be any indication of this in the
cruiser as the officer (hopefully) knows where they are.

Mark

The truth as I perceive it to be.
Your perception will be different.

Yes, they were 7Mary 3 & 4.. A few tidbits re the show:

Ponch & John's badges were real. They were the only two real badges used. The badges are on display in (disputed, no one I know in CHP is sure) either the academy, or HQ in Sacramento. The rest of the badges were fake. The opening where they show two CHiPPies riding: Those are real cops, they DO ride that close, and they DID have to hold a hand mike (no headsets at that time). One of the riders is a retired Sgt. Also, NYPD Blue they use real NYPD badges. Why? They log the badge #, and that way if an actor comes up "Oh! My badge fell out of my pocket on my way here!" they know the badge #, and if they see that #, they know it's because of the show. And another tidbit: Most police officers with larger cities or cities where the badges are fairly sought after (Los Angeles, San Francisco, State, NYPD, etc) the police officers wear FAKE badges. The real badge (at least for CHP) are REAL gold. Cost upwards of $200. So the officers take the badges in a safe deposit box and wear a gold colored replica.

Let's get back on topic now. I think I used up WAY more than my .02.

I love Excel because of the AutoFilter function. If I'm scanning
several cities worth of police calls and I hear "go to channel 4", I
just go to the frequency use column and select "POLICE" and then the
frequency designator column header and select "4", only frequencies
(and the user agency) with a "4" designator are displayed. If anyone
would like my Excel file (with Middle Georgia freqs as examples), just
email me and I'll send it.

It's FUZZY. The FUZZY callsign was inherited from
the 107th FIG in Niagara Falls, which is now the 107th
AREFW. The aircraft type is KC-10.

>Who are JAWS?

Could be JAMS - I've heard that callsign in the area
a few times, but I'm not sure exactly who they are.

Some cities are in fact using GPS for tracking units. They units will
still respond with "Engine 4 responding from Middlefield &
Charleston", but the dispatchers will no longer have to say "Who's
closest to Middlefield & Charleston?" Also, police officers do NOT
like the idea.. no more sneaking to 7-11 on paid time. =)

Toby Zidle <tobyz@airmail.net> wrote:

Hello!

I am looking for a copy of the schematic for a Uniden BC-170.
I will be happy to pay for postage, and copying costs!

Any assistance would be greatly appreciated!

1775. Area-51 Frequencies 1/43

Newsgroup: rec.radio.scanner
Date: 1996-08-18 00:00:00 UTC
From: Roger_Cravens@fforum.blkcat.com
Message-ID: <NOMSGID_1=3A109=2F239.0_960818_195500_f90e07a4@fidonet.org>

Subject: Area-51 Frequencies

Here's what I have for Nellis AFB/Area-51. It's a collection of over literally years that I took great pains to assemble from either printed material and from the many, many people who have personally visited the areas around Nellis AFB. I believe it is probably the largest listing that I am personally aware of. If anyone has any others, I'd appreciate knowing about them.

For all of you USAF buffs, I'm sure some of the identifications are now out-dated. But it's still an excellent listing.

Roger Cravens
Atlanta, GA

I have put these together for Nellis AFB, NV (Dreamland, Area 51, etc.) with a minor emphasis on Holloman AFB because there appears to be an operational connection between the two Air Forces bases. What this connection is remains to be seen to use here on the east coast (Atlanta, which is where this list originates).

Below this you will find more general and associated Government frequencies that might be worth your time scanning various ranges. The only thing I have left out are frequencies for rail operations in and out of Nellis and Holloman since I could not find that information anywhere. That's not to say it's not available, I simply didn't take the time to make a trip to the local FCC office an dig them out. They, too, would be interesting to monitor in terms of what heavy cargo is coming in and out of these Air Force bases. Most, if not all, branches of the Armed Forces have their own engines as well as individual pieces from flatbeds to whatever size need to haul their cargo.

The following military units and organizations have been identified as having a home-base at Holloman AFB:

4450th Tactical Group
46th Test Group (AFMC)
475th Weapons Evaluation Group
Fighter Weapons Center
Fighter Weapons School
49th Fighter Wing
4th Space Warning Squadron (AFSPACECOM)
57th Fighter Weapons Wing
552d Tactical Operations Force
66th Rescue Squadron
83rd Air Control Squadron

Combat Rescue School
ACC Base
AT-38B Operations
Department of Energy Testing Site(s)
F-117 Operations
F-4E Aircrew Training
German & Taiwanese Aircrew Training
Indian Springs Auxiliary Airfield
MH-60 Helicopter Operations (Search & Rescue)
Phillips Laboratory Balloon Branch
Thunderbirds Precision Flying Team
US Federal Penitentiary

The following military units and organizations have been identified as having a home-base at Nellis:

26/64/65/527/5021 Tactical Operations (Aggressor) Squadrons
414 Composite Training Squadron (Red Flag)
4440 Fighter Training Group
4450th Tactical Group
4477th TES Red Eagles
549th Joint Training Squadron (Air Warrior)
552d Tactical Operations Force
554th Combat Support Squadron
554th Medical Group
554th Operations Support Wing
554th Support Group
57th Fighter Weapons Wing
57th Logistics Group
57th Operations Group
57th Test Group
66th Air Rescue Squadron
820th Civil Engineering Squadron (Red Horse)
896th Aviation Depot Squadron
99th Tactics & Training Wing
ACC Base
Air Force Air Combat Command
F-16 Aggressor Operations
Fighter Weapons Center
Fighter Weapons School
USAF Special Weapons & Tactics Center
USAF Special and Conventional Weapons School
USAF Thunderbirds Team

Background: In July, 1941 Nellis was activated as an Army Air Forces Flexible gunnery School. It was closed in 1947. It was reported in 1949 as Nellis Air Force Base, named in honor of 1st LT William Nellis, a World War II P-47 Fighter Pilot who was killed in action in Europe in

-@> * Reply-To: MY_PO_BOX@Postoffice.org

MFJMK-@>This message is to all of the people that I've offended on this
-@>newsgroup.

MFJMK-@>I'm sorry that I've been such as ass. It's mainly because I have a
-@>drinking problem, and a drug problem, but I'm dealing with it. I get
-@>on the internet and post things that I regret the next day, but by then
-@>it's too late.

MFJMK-@>Let My post be a reminder to you what drinking and drugs can do to a
-@>person.

MFJMK-@>I'll probably get drunk and retract this someday, but for now, I just
-@>want to say that I'm sorry (and sober, for now).

John, I fully realize this is not the conference for this, but having
been reared in an alcoholic family on both sides, may I please recommend
in the strongest terms that your local AA/NA should be visited at your
earliest convenience. They're in the phone book.

If your alcohol/drug problems are currently beyond your control to
handle, there are excellent alcohol/drug recovery hospitals in your
area.

Best wishes and good luck in your recovery.

>activity.

I can confirm that that the European version UBC-3000XLT has the
exact same problems. Software version: EUr 1.02.

1781. Re: DOJ homepage hacked!!!

Newsgroup: rec.radio.scanner
Date: 1996-08-18 00:00:00 UTC
From: malex007@aol.com
Message-ID: <4v7lue$n8@newsbf02.news.aol.com>
Source record: 226072

Apparently the hacker who hit the DOJ site was mainly angry about the Communications Decency Act (this according to today's local paper). He also posted pics of Hitler, sexually explicit material, swastikas and links to sites that contained unflattering material about Clinton.

The person who posted the original message <lgshirley@mail.worldnet.att.net> said that he checked the site last night while mousing around. The paper says the site was shut down early Saturday--it's still down now. I sent him e-mail, but the message bounced. Now, I surmise that whoever posted the message may have had more involvement that he cares to admit to.

It wouldn't surprise me, in any case. Lots of hackers also are into scanners because its a good way to get credit card and long-distance access codes.

Mackey is one who is hard to ignore. His actions are so obnoxious that
they stand out even in the anarchy of Usenet. He would make a good
case study in the manifestation of abnormal psychology on the Internet.

From: david@cmpedge.com
Message-ID: <david-1808962158330001@max3-sc-ca-37.earthlink.net>
Source record: 226075

Hello all.

I'm working on my privat pilot's license right now and want to record my air traffic control transmissions from my AR8K. However, since my flights are usually 1+ hours, I don't want to waste tape.

Can anyone recommend a good (but under $100) voice activated tape player that I can plug into my 8K? I bought one from Radio Shack but when I plugged in the 8K, the tape recorder picked up slight sounds from the scanner (even with the squelch up) and just ran continuously.

Any suggestions would be greatly appreciated!

--- David

In the SF Bay Area, the American ambulance service has GPS in all their
ambulances. When dispach reacieves a 911 call, the termial calls up a
map centered on the 911 location with the five closest ambulances
displayed, the computer selected one is flashing. It has resulted in a
signifgant reduction on response time.

:> This makes me wonder how you're getting access to NNTP without ANY internet
:>access?? You're dialing into a server of some sort, and it allows you access to
:>remote NNTP hosts, and you'r telling us that you don't have any SMTP access?

Doesn't sound stange to me. There's a lot of BBS' that call up different ISP to get a 24hr connection to the NNTP (there's a name for it). It varies from ISP to ISP, some charge an arm and a leg to allow the BBS to do both, even more if they want to allow telnet access. So for the sake of keeping the costs down SysOps just provide access to the News Server.

LOOKING TO BUY A KBAND HAND HELD RADAR GUN IF YOU HAVE FS PLEASE
EMAIL JIMMY2@FLASH.NET WITH PRICE THANKS

1801. Re: NiCd Cell & Recharger

Newsgroup: rec.radio.scanner
Date: 1996-08-18 00:00:00 UTC
From: len.anderson@mogur.com
Message-ID: <960818153519257l4@mogur.com>
Source record: 226157

BC>From: bcheek@cts.com (Bill Cheek)
BC>Subject: Re: NiCd Cell & Recharger

BC>ronkatz@interlog.com (Ron Katz) wrote:

BC>> I hope Bill Cheek reads this
BC>> and recalls the exchange we had on this subject.

BC>>> I'll just throw in a quote from EDN magazine, May 24, 1990, "Thermal
BC>>> Charging Circuits Safely Boost NiCd Batteries," pp 147-152, by Jim
BC>>> Williams, staff scientist at Linear Technology Corp., Milpitas, CA:
BC>>>
BC>>> "The temperature response of a battery during charging is quite
BC>>> predictable. A discharged battery converts current to stored
BC>>> electrochemical energy without producing much heat. However, when
BC>>> the battery arrives at full charge, the cell is saturated and can't
BC>>> hold any more energy. As a result, the battery now prouces heat, and
BC>>> its temperature increases."

BC>That quote, if that's what it is, is really flawed. Bad. Think about
BC>it. Think deep. Go sit on the thundermug; elbows on knees; and chin
BC>in one hand. And think.

I looked at that article again, read the "flawed" quote I posted,
checked it for typographical errors and found none other than making the
lines longer than in the magazine. To critique the article, its author,
and editor (?), I forward the following address published in the August
1, 1996 issue:

EDN http://www.ednmag.com
275 Washington St.,
Newton, MA 02158

Editor in Chief: Steven H. Leibson ednleibson@mcimail.com
[there are two senior technical editors and seven technical editors
listed but I don't know who was the editor of Williams' article]

EDN is a "controlled circulation" magazine, available free to those in
the electronic industry who qualify (one fills out a form to do so).
EDN is one of several Cahners Publishing Co. magazines.

BC>It may come to you just what is wrong with what you quoted. If it
BC>doesn't, then you may be flawed. The above is exceptionally nescient,
BC>if it comes from a "staff scientist". I have a hard time believing
BC>that, but no matter. The flaw is obvious.

Not being an electrochemist, I didn't find any "obvious flaws" in that quote nor in the article nor of the brief exposures that I've had with electrochemists in the past. Mr. Williams' job title of "staff scientist" has been printed before, included in his own book on instrumentation circuit design. To critique Jim Williams directly, I forward the following work address:

Linear Technology Corporation (408) 432-1900
1630 McCarthy Blvd., FAX: (408) 434-0507
Milpitas, CA 95035-7417

I'm sure that Linear Technology would welcome any corrections to alleged misinformation regarding their wide line of semiconductor products and many application notes, however nascent those notes are considered.

John;

You are one selfish jerk. Putting all us readers with your crap. You
truly a fucking putz. Nobody gives a shit about your problem with cheek.

1803. Re: **RS 2035 HOW GOOD IS IT????

>hould I get it, ($150) or pass?

PRO-2035: 1995 vintage wide coverage base made by GRE.
1,000 channels, but cumbersome 100 channel bank size.
Tuning knob. Broader IF selectivity than PRO-2006. Poor
dynamic range. 10 linkable search banks. Dumb Auto Store
feature stores the same frequencies over and over. Wastes
time scanning empty channels. See "The Radio Shack PRO-2035
- How Does It Compare With the PRO-2006?," by Bob Parnass,
AJ9S, in Monitoring Times, January 1995.

Reprints of articles from Monitoring Times are available
for $2.00 each plus a self-addressed stamped envelope from:

Grove Enterprises, 300 S. Highway 64 West, Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

Note: I don't get any part of the $2.00.

I surmise from this "continual" discoutesy to the
readers at large that the main players in this
diatribe are after a record of sorts...?

I would have surmised that this should be time to
submit it to the Guinesss Book of Superfluousness.
get your award and then go on to things more in
line with S C A N N I N G! (this a tribute to Sam
Kinneson's attitude).

If the people were really nice people they would
take their argument to the e-mail route...but that
smacks of "one on one" and no audience.

What people won't do for their 16 seconds of mediocrity?

bill conduit
etc.

==========
Please note these Nevada frequencies. They could be extremely

important to your search for various types of special operational aircraft. The people with these agencies spend most of their careers on the road. They should programmed into at lease one back of your scanner, particularly at night.

Other important US Government agencies have been listed below, starting with the Department of Energency and the N.E.S.T (Nuclear Emergency Response Teams headquartered out of Nevada). Of particlar importance to you and your safety should be the frequency range 406mHz thru 420mHz. These are where the majority of Nellis AFB (non-air related) conducts their operational business. It should also be noted that if you take it upon yourself to go past the warning posts and signs, that you have the appropriate training in special military operations. I have not included the frequencies here, but for those reading this that live in and around the Nellis AFB range area, all known Fedeal Emergency Management Agency frequencies should also be located and listened to intently.

Also not included in this listing (I've tried to limit it to VHF/UHF only) is the HF frequencies. These can be listened to through any ham radio. And this short explination is not sufficient to go into ham radio and associated utility frequencies. Although I may at some later date combine a listing of both HF (approximately 2000kHz thru30mHz), VHF and UHF into one listing and make that available.

In the meantime, keep your eyes open and your radio turned on. The answers are out there, somewhere waiting to be discovered.

1841. cop shot interesting listening

Newsgroup: rec.radio.scanner
Date: 1996-08-18 00:00:00 UTC
From: alpix@voicenet.com
Message-ID: <4v5glo$e2v@goodnews.voicenet.com>
Source record: 226207

In Phila. we just had a cop shot. While this is a very tragic incident and the scumbags that did this are still on the loose, it was interesting to hear. I've never heard as many coms on J band before.

In Lexington, Ky., we just had a similar incident about a month ago.
Definately provided for the most interesting police band scanner
listening we've had in a while!

From the FAQ, "BUYING A USED SCANNER RADIO:"

PRO-2040: late 1995 vintage 100 channel base made by
Uniden. Fair performance, but minimal image rejection.
Local oscillator harmonics account for spurious responses,
e.g., reception of cellular telephone calls in the 460 MHz
UHF-high band. Scans over 40 channels/sec. Can lock out up
to 50 channels from search. "Soft" on/off power switching
via keypad. See "The Radio Shack PRO-2040," by Bob Parnass,
AJ9S, in Monitoring Times, December 1995.

Reprints of articles from Monitoring Times are available
for $2.00 each plus a self-addressed stamped envelope from:

Grove Enterprises, 300 S. Highway 64 West, Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

Note: I don't get any part of the $2.00.

Hi Bill,

Thanks for your input. You're right, DES encryption can be a bear in certain areas. But some folks hear mostly clr voice. It depends on where you live. That is the intent of the post. To see just what is happening where.

I hear plenty of clr voice, trust me, even w/DES available they prefer not to use it for certain details.

You're right about the books available, they have some nice lists. But I have found some are now outdated. Plus I have found that the "standard" freq assignments are just that. Local action must consider any possible interference with other users on the band and they use different freq's sometimes.

It's the use of different and sometimes unpublished freq's that I monitor. But if the post helps a few people enjoy their scanning and maybe they then contribute to the group, then that's enough.

Your view is appreciated since they obviously use a lot of DES in your area from the sound of your letter. A couple of E-mail ltr's have already told me of activity in the clr. Give it a chance, maybe something good will come out of it.

Regards,
LGS

Scanner With Serial Port
I am looking for a scanner that has a serial port so I can connect it
to my computer (IBM).

Let me know what you have, what it does and how much you want for it.
I'm looking for a lower priced unit (not $1000).

mailto:rtwodtwo@pws.net

John in Roseville California (near Sacramento).

There is a mod, that someone else already posted a link to but just for your information I did it on mine and I would have to say it is not worth it. I did not perform the modifications to the front end (L101 I think) and that might perk up the sensitivity a bit but otherwise the scanner is pretty deaf.

You cannot store any freqs that are out of the standard range of the scanner and you can only scan up (that is after you scan down) because the proper IFs are only enabled when scanning up. You cannot direct enter any frequency and must use "direct" to from 30Mhz and search down then Search up one you pass the frequency you want. When you search up the scanner will most liekly use a different step size (mine does) then when you searched down and you will never get the exact freq you want. Not to mention the filter selection is not adequate even a near by CB radio sounds lousy.

The Mod is easy however so you can try it out yourself. It will take longer to program in the special splinter frequencies then to do the mod.

1850. (binary)Do NOT listen to these CellPhone Channels!! - cellchan.zip (1/1)

Ok, yeah I know.......I broke two rules here. I'm posting a binary file to a non-binary newsgroup and another one that I don't know about yet.
(I know someone will tell me)

I'm doing this for your safety. It is forbidden by LAW for you to listen to conversations held on cellphone channels. Well, if you don't know what the cellphone channels are you may very well find yourself in violation of the LAW!! And god knows how horrible it would be to wake up in a jail cell with an RF hangover and find that you've made new and strange/interesting friends, like the local version of Jeff Dalhmer!

So to save you from a fate worse than death, here's a listing of the CellPhone channels in MicroSoft Excel format. If you don't have MS excel, you may have to find an Excel formet reader. (MS usually supplies this type of thing on thier website)

Bill

Cross-posted to: rec.radio.scanner,alt.radio,scanner

I just took my BC 200 XLT out of storage. It has been there for over 2 years. (I would have gotten back into it sonner, but the truth is, after moving a few times, I just plum forgot where I packed it)

Unfortunately, the thing was stored with the battery plugged into the adapter plug. I think thats the cause of my troubles.

The unit works, the problem is, you have to jiggle the adapter plug and hold it in just the right position for the scanner to get power. However, the red indicator light on the battery is always on when the adapter is plugged in.

So -- what did I do to the battery by storing it this way?

Is there any way I can fix it?

I don't particularly care if I loose the use of the batteries themselves since I always used to use it either with the AC or car adapter.

I have another battery (somewhere) but I'd like to start using the scanner before the turn of the century.

Maybe I should just buy a new battery.

Thanks,

>Two different metals will act almost like a diode and rectify your
>strong signals and cause your receiver to do some funny things. You
>may have to get out their and really clamp down on the grounds.

Check for any rust or corrosion of any kind anywhere in the
antenna system, including the masts, the t.v. antenna, the
feedline to the t.v. antenna (since the scanner feedline
is new, you said), clamps, anything that could be rectifying
and mixing strong signals.

The f.m. broadcast band attenuator might help, but there
might be other sources of r.f. increasing your noise floor,
in addition to the antenna problems mentioned above.
You might very well improve your reception by *decreasing*
the antenna gain. Your receiver will hear better if it
isn't fighting the plethora of unwanted signals it
now hears.

Since you live in the thriving metropolis of Los Angeles,
you are surrounded by paging transmitters, 2-way transmitters,
and other sources of RF energy. The only sure-fire cure
that I have is to move up to Oxnard.

Yeah, that's a bummer. But after a while, you will get GOOD at using
it and find ways to manage......

>Do not get me wrong, this is an excellent deal for $30.00.
>I just feel they should allow you to save or print what you see.

So the best possible thing for you to do is WRITE to PerCon and tell
THEM about your likes and dislikes. They can't possibly respond in
terms of changing the product without feedback. They NEED your
feedback. So give it to 'em.

Sure, do it. It would take some work to convert a 6-cell pack to
3-cell or a 4-pack to a 2-cell. and then what do you have? An
expensive power pack. But......it might work ok.

I'd be inclined to do some testing for heat accumulation under
discharge and notably for operation time.

Are these cells rechargeable? If not.....gawd, the price!

Those are map coordinates. Ventura County (correct me if I'm wrong)
used to
use the Thomas Brothers maps for coordinates, but as of about a year ago
they
started using another mapping system. They used to say "498 Boy 4".

>I would like to know just how this was done, any ideas? >Is it that easy
to
>hack someones homepage?

Yes, it is easy to hack someone's home page, especially if the page permits you to enter data, say as into a form. Pages using Java scripts can also be readily hacked. After the movies "Hackers," MGM's home page was hacked; when the publicity company for Rodney Dangerfield claimed the RD web site was among the most popular, that was hacked.; after the publication of "Takedown" by Shimomura (a noted security expert) and Markoff (NYT reporter), the Takedown home page was hacked. Takedown, by the way, chronicles the capture of Kevin Mitnick, uberhacker.

There's a hacker group called The National Liberation Front that has claimed responsibility for many of the web page hacks. Dunno if they were involved in DOJ hack--this is the first I've heard of it.

>Hi Rich, all 30 pages of the FCC text are to be found at URL:

>http://www.fcc.gov/Bureaus/Cable/Orders/fcc96328.txt

Thanks for the pointer. The regulation looks fairly ironclad to me. HOA's must allow TV antennas and 1m dishes. I think I will mail a copy of this to my HOA and get rid of the old cable monopoly I have been dealing with. At $30.00/mo., a TV antennas with mast and rotor will pay off very quickly!

>Lets all hope they extend this ruling to the Amateur Radio Service.

The legislation was driven by the type of economics thar we amateurs cannot muster. Also, with fewer people using cable, there could actually be more objections to amateur transmissions in these living quarters built in such close proximity. However, TVI and other interference concerns cannot be extected to improve when a law is issued giving free reign to most types of telecommunications. You can argue for a long time that you use your tribander antenna for TV reception (perhaps not the best reception) on the same antenna that you happen to transmit with. That's *if* anyone notices a difference between a TV antenna and a tribander (say a 10/15/20).
Anyways, it's something to try I guess ;)

>Good Luck with the HOA -- mine is hopeless.

I think after reading the regulation that your >HOA< is out of luck. You would have to have special circumstances affecting 'safety' (this would normally apply to tower hieght with respect to the closest adjacent residence, or possible zoning regulations for wind strength in some areas) or you would have to be in a historic district.

If your HOA does not believe the new regulation, or cannot undertsand it, it seems that you do not have to pay any penalties even if they 'fine' you. Like I say, it looks fairly ironclad but then again I am not a lawyer. I still think anyone having to live with one of these stupid antenna restrictions would be fairly safe going ahead and putting up a TV antenna...not much to lose, and a rather clear federal pre-emption to back you up.

Anything's possible -- ask Beck, Rife, or Lakhovsky. (OK, Beck -- the rest are dead.) But if EM radiation does have non-thermal biological effects, my guess is that at an arbitrary frequency and power level it would be more likely to harm than help.

I was wodnering if there was anyone out there that had an old crystal scanner capable of picking up the NOAA stations. I am actually looking for two of them. one for work, one for home. Preferably handheld. I have a local NOAA station so great range is not really necessary. case condition really isn;t a matter to me either. all I care about is that it be able to pick up my NOAA station.

The question the producers probably asked themselves, "Would it play in Peoria?" I guess so.

LA is HUGE. You can drive for an hour and still be within Los Angeles City limits. The city of Chicago would fit nicely within the San Fernando Valley alone.

>
> Here is another way of looking at the very beeeg picture. One scanner covering everything, both fire and police and others don't work when covering Breaking News.

Installing Scanners is more of a "what do i need to listen to" to get to the scene before it's cleared?

So the parameters become: when i am in a certain city I must be able to listen to that city .... and others. This is where the bearcats and radio shacks come in play: 100 with 10 banks.

I use my office as central location with my police radio as from the city I live in....this is primary radio. From here most of the incidents occur which I go for news to get on video or still cam. Then there is North and South cities of which go into a bank....no matter how few there are.

Some cities have mutual aid channels which they all work of. So you have to program them into each city's freq's and also the clemars freq's too. Just to be able to know when they are going mutual aid or asking for next cities help ...

On the 200 channel I have all the freq's...for all the area I cover and then areas east of me where there may be an incident occurring coming my way....this way I am setting my self to an area where they will be coming into this area....you have to think ahead.

Then there are specialty agencies and they go to a bank which are with related ones punched in. All in this "utilitarian" 200 channel scanner. It's able to just concentrate on one city or area while the other scanner goes and listens in on that agency instigating the activity. Having the second 200 scanner allows me to listen at same time to their secondary frequency when they talk to control or car to car....very much info goes off on the other channels....

One scanner (16 channels) covers CHP...but in a bank on
another 100 scanner, I have the car to radio freq's in there.
This way I can hear both sides instantly. for ex: 42.82
and 42.88 are now one...I get it all. Or I go to the state
local freq and get same...but at times it's nto clear.

One scanner is just 800-900 programmed. Now I have five
scanners in Jeep...just need to have this now that the cities
are on trunked.

But that scanner works off an Internal Cell Phone Antennae
and works fine. Remember this: you can always get those indoor
antennae from Radio Shack which affix to the windshield of car
... use these for those channels which you can get no matter
where you are. These are the ones too which work with no
antennae needed...but the windshield one gives it better sound
and allows you to hear control better.

This setup is based on "knowing what is going on" and being
able to get as much chatter NOW to get there to get video or
stills of for money to make.

Now they have scanners which hold 500 and 1000 freq's....plus
one can hook up to a computer.

What they really need to make are scanners which are smaller
then the bc760's....so one can put more of them in a car
and have speakers hooked up to them for listening....being
able to program via computer and just a few essential button
for on/off, scan/manual, priority and bank selection buttons

they have special racks to mount scanners on top of each
other horizonatlly or vertically....have a catalog where
they will work if you have the room on the tranny hump.
Having a Jeep with console tranny control I have to mount
them on sides of hump or where my am/fm radio was, etc.

this will give you some idea of what is really involved
when it comes to getting prepared to do a pro job with the
scanner seen as "what is essential" to get to the event to
get the story.

Back in 1989 the NJ Assembly and Senate started work on changing the previous law which involved the use of a scanner while mobile.

Assembly Bill 4557 and Senate Bill 3593 were both passed and the final version was signed into law by Gov Florio on 1-18-92.

You can obtain a copy of the bill, Senate No. 305, from the State Legislative Services. I keep a copy of it in my glovebox just in case.

It allows for the use of mobile scanners as long as you don't use them to commit a crime or interfere w/any public servant doing his job.

I believe the Legislative Services number is 1-800-792-8630 ask for a copy of the bill.

To use the mister scanner database, I use the internal export
program with lat long export turned on. I exported Iowa and got
a 7 meg file, still too large for excel (16384 records max)
so then I grepped it on ","\ 091 to select the 91st paralell in
iowa, (and so on til I get 92 93 94 95)
So now I have Iowa by paralells and a number of small files
I then import delimited by comma, it took the quotes out,
and I have a file that can be sorted by any field that pertains
to the zone I want. the size of the resultant is under 10 meg. in all.
Now for L.A. you will get bigger files....
-Chris
email for more explaination.....

Then I use
grep.com (a common file string subset matcher (or dos 'find')
to extract

Very easy. Most of the people who make lists or scanner books include bogus or coded frequencies along with the rest of the info. That way the person can claim that they modified the information along with other things that can't be gotten from FCC database. Examples are; what the frequency is used for, like a tactical channel #2, the appearance of the information in printed format can also be copyrighted. Anything other than what is given on an FCC License can be copyrighted by an individual because its now their information and wasn't included with the FCC's public information. A frequency by itself can't be copyright but everything that fallows it can. I've had several copyright attornies look at this question and they advised to verify everything before you include it in your frequency list. Especially if you plan on distributing it to the public. ->Dan

The advertisement I saw for the scout, shows the scout picking up Emergency vehicle transmissions and
"Reaction tuning" the AR8000, using the supplied "mini antenna". NO WHERE did it state, NOT TO BE USED IN
HIGH PAGING AREAS, or SPECIAL FILTERS REQUIRED, or SPECIAL ANTENNA REQUIRED. I wish I would have known that
this $440+ device could not be used in highly populated areas.
>
>you must use filters and antennas of a particular length.<clip>

This last weekend I purchased 2 "tuned" antennas for the frequencies I would like to use the scout
with. One gave me the exact same results as the "mini-antenna". The other antenna picked up nothing.
I tried these antennas on my way home from a Hamfest near downtown Chicago to a rural area about 50 miles
outside Chicago. The Scout NEVER "reaction tuned" anything with a voice transmission! So far its been about
a month, and I have never captured a voice transmission frequency.
>
> I don't mean to flame but I hate to see such injustice done to a terrific product.
>

The product may be "terrific", but I have yet to see it work once as it was advertised. My final option is to
spend more $$ for filters ($33 from mini-circuit or the limited supply from Opto which seems really expensive)
and hope that it works. This is beginning to be a real money pit device. Sorry to be so down about the Scout,
and I don't mean step on any toes, or "flame" anyone, but I think for the price of this thing, I am very
disappointed _so_far_. Opto should clarify that certain options are needed for certain areas or some such
disclaimer, because I feel thier AD is very misleading.

> It's like someone who buys a Phillips head screwdriver and then complains that it doesn't work on flathead screws. Seeesh.

Well geez, then don't show it being used on a "flathead" screw. (unless you state, optional bits may be
required.) ;)

Bottom line: If you buy a Scout and live in a fairly populated area, $440 is not ALL you will pay to
"Reaction tune" your AR8000 radio. Be prepared to spend more.

I rang our gonvernment radio people yesterday, and they informed me
that from 26.9???MHz to 27.2???MHz, you can transmit anything you want,
any way you want, up to 1W. Voice, data, whatever. There are require-
ments for the center frequency spacing and bandwidth, 5KHz separation
and 10KHz BW from memory.

<grin> Now I can network that 486 in the shed without coax. PPP will
to nicely, thank you.

glen.

>Tom

Tom,
Get the new Police Call, all are listed there. Although if you have one that is less than 5 years old or so, Sterling,Utica,Macomb Sheriff are all still about the same. Warren has gone to an 800MHz trunked system but it is extreemly easy to follow, and the data channel changes at the same time every day.
The State Troopers at post 24 in Richmond get dispatched out of Metro and are still on VHF-Lo

Hi,some agencies in my area are trying some scrambling techniques
to allow for "anti-scanner" communications.
Frequency Inversion and FM sideband (I'm told?)
The freq. inv. is not a problem but what about the FM sideband??
Does anyone know what this involves as far as the scannist being able
to hear what's going on?
Basically,how do I get my scanner to intercept it intelligbly?
Thanks for any help!!

> Thanks John

All it lacks is alphanumerics. This can be worked arounded by running fro
a 232 port via something like Scan Star. It scans it's banks at a
blazing 50/sec, but not as fast when run from a computer. There is no
intermod and it is very sensitive, a hard to find combination. The
shortwave reception is poor due to wide filters, but is it excellent for
low band on up. Very few birdies and they are mostly found above a
gig. New ($1100)or used ($850), it's a good deal. The US governemt has
used them extensively. A few months ago, used "shells" of the AR3000A
showed up for sale. Some spook organization bought the scanners and used
only the RF boards. Nobody is talking about who did it!

I haven't compared it to a AR5000, but they are nearly $2k.

From: bjohnson@thekat.maximumaccess.com
Message-ID: <eb0_9608191828@thekat.maximumaccess.com>
Source record: 226016

The U.S. Navy just concluded their last air show at Miramar NAS (August 17th and 18th). I didn't get to see the show in person but watched it live (during the Saturday event) on local television station KNSD Channel 39. While the nereBlue Angels were flying about, my scanner was tuned to +/four of their air to air primary frequencies. Now, that was an extra thrill. It was almost like being in the cockpit of the jet. The frequencies which I heard them on are as follows:

275.3500 MHz BLUE ANGELS (F2)
307.7000 MHz BLUE ANGELS (F3)
345.9000 MHz BLUE ANGELS (F5)
241.0000 MHz BLUE ANGELS (air to air) *

---

* Heard only as the number 4 plane was re-joining the formation. The plane had a slight problem and had to land briefly to have it checked out. It later took off and re-joined the air show.

By the way, my listening post is about six miles north of the U.S.-Mexico border. Miramar NAS is about 30 some miles (give or take) from me. The USN say they have no plans to continue the show up there but it may be hosted by the U.S.M.C. next year. Nothing is definite on that, yet. Happy Monitoring...Brian.

>keep emotion out of this ruling. Self-denial that RF cannot cause illness
>will only hurt yourself, but coming on here and stating that to hundreds

Unfortunately, your emotionally charged arguement is all you have to
prove your point that regulation is needed to the level it has been
applied.

It would be much better if we could ignore the people who wanted
to pass laws based on ficticious or emotionally founded fantasies.

Every so often the government does that, goes out on a "jag". They take
some information that is normally quite emotionally charged and use
it to pass laws that far surpass the need.

A good example was the "fact" that 50,000 children a year are abducted
and we needed new laws to stem this tide. They passed a bunch of new
laws, citing the dopey figure, without ever considering that it was
a lie. The laws remain to show how harmful a well-meaning but terribly
misdirected group can do.

>
> Be safe,
> Jeff KH2PZ

With the 2.5 watts my little HT puts out, I get into some of the
repeaters in the area marginaly, others not at all. With the 5 watt
pack, I get into most of them full-quieting, some of them marginaly.
I comply with part 97 in this respect.

When it comes to simplex use, it's a different story. With my Gp-9, I
can use the 30mw setting and make contacts in Mesa which is 30 miles
away. So my "KH2PZ incorrect" 2.5-5 watts is not necessary.
And to get right to it, there is no provision given, with respect to
the rule you mention, on any of these commercially available HTs to
comply. Think about it, if your power is adjusted in steps, and you
can operate with a lower output then that povided by the radio's
settings, are you in violation or not? It says minimum power
necessary, not minimum power setting on the radio.
And one other thing, I don't know what rock you live on, and whether
or not you have to deal with intermod, but squelch'es are used at a
high setting here in Metro Phoenix.

Don't make any assumptions as to my operating practices or proceedures, as I will (or would) not make any of yours. But it seems that when you are presented with reasonable debate, you resort to attacking the person and not the subject matter. Frankly, that in itself is not amateur like.

You mentioned part 97 at the end of your last post, mixed with the subject we *were* discussing. It appeared to me that you were implying that this EPA crap (which is now also part of 97) was the basis for you advising that HTs be held at arms length at minimum power. Thus accepting the regulation as being valid and worthwhile. I obviously disagree.

If you want to keep debating the issue, that's fine. But keep it on the level of subject and not assumptions. Ok?

Why not just use dBase? Oopps I forgot, it's a dos program. You could use Access, Foxpro, and Paradox. I myself use dBase III+ from a long time ago. Why one may ask? Simple, it works. I have had no problems extracting data from Mr Scanner. Come on 7MB is not a large file by any means. Ok, I will give up one thing. It did take about 12 hours to build the index files.

My local radio shack has a pro 2026 on clearance for $149. It looks like a good price. My local cops just went 800 trunking. I am just looking for a bedside scanner to keep track.

Which model of Bearcat is the Pro 2026? Is it the BC 760?

The radio shack catalog says automatic 2 second delay. Can it be turned off? I don't want it at all for a trunking scanner.

Don't some of the bearcat's have a PL board that go inside, is this one of them?

Any real life info I can get on this scanner would be appreciated.

Tom

Heyas.

I'm thinking of getting into the scanning hobby, but am not sure what kind of scanner I should get that is the best for my buck. I want to primarily use it in my car, but taking it inside would be a desirable option.

I've heard good things about the Beartracker from uniden; can anyone comment on this one?

Thanks
Bart-Jan

Go back to Radio Shack and get their attenuated cable, cat #42-2152 ($3.49).
This will attenuate the extraneous noise, and allow the tape recorder to
work as you want.

>Thanks in advance

It's only illigal in NJ to use a scanner in commission of a crime. If
the cops stop you for mere possession (even in a vehicle) you got
them by the short hairs. Consult a good lawyer and you could have a
payday.

>Thanks in advance

It is not illigal to possess any type of scanner in New Jersey. It is
not illigal to posess amobile scanner. It IS illigal to use this to
commit a crime.
To act as a lookout- to determine police patrols etc.
Just listening or call "chasing" is not illigal.
However, I would not chase calls unless you are with the media or are
an emt etc.

Hello to all... I'm kinda new to this group, and have been following this thread, and have only one thing to say. Thank God this isn't the FIDO Scanner echo... there would be nobody here.. we'd all be locked out for mentioning something "Off Topic". Ya'all gotta agree, when you start a conversation with someone... it SELDOM stays on the same subject for long.... All I see is some guy who wanted to continue his conversation on another echo, after being warned by his sysop to "knock it off". His post to ask the conversation to "move" was off topic.... and POOF! Bill (This is my echo and I am GOD) Cheek, should really read the constitution, and what it says about freedom of speech.

Just my 2 cents worth.. (More like a buck and a half) Grinz

If this is real and you are in fact his, I repeat, HIS
ISP, then you are as bad as the "seekers of mediocrity" who
are on this flame war against one person. I find that the
action you say you are taking is really low-head. You know
what I mean...using your groin as your emulsifier.

What are your "proofs" that you are indeed who you claim to
be? Or are you like those televangelists who close their
eyes "real tight" predicting that their reality is the way.

IF you are what you claim, you are being sucked in to a matter
which seems to be continued by those who complain against this
Cheeks guy....notice how it's always "their over and over"
posting on and on ad nauseum.

The people who complain are the ones who are creating a prob-
lem which they know cannot be solved because the CHEEKS GUY
has a certain amount of integrity and character to allow these
complainers to go after him because they "don't agree".

The complainers have their agenda...for you, if you are who
you claim to be, to get sucked into and then this makes them
happy to have won their battle with someone who don't take
their shit...by whining all the time.

The complainers are part of the larger problem....you seem to
forget one point: they refuse to listen. They allow what they
read to be taken differently than given and then get all the
group upset because Bill Cheeks has the audacity to answer the

charges they make against him.....

It would seem that you are going on a hunt for facts which are not yours to judge on....check your premises....this Cheeks Guy responds to those who publicly libel him...I would do the same thing and have done so in other groups....

Maybe if Bill Cheeks were the instigator of this problem, yes, that would be fair. But so far what I have been reading here the people on the other side of the shit pile are smelling up the shit pile.....

Optoelectronics Scout 25 Frequency Recorder

Optoelectronics Scout 25 like new, with original box and packing. Includes Opto stubby antenna, charger, and two filters; Startek BP-150 and Startek HP-400 which enhance the sensitivity for the band you are searching by reducing the signal to noise ratio.

Specifications for filters are:

BP-150; 130 to 500 MHZ, >20db loss below 95 MHZ, >10 db losss below 107 MHZ. Will eliminate FM band interference.

HP-400; 400 to 1500 MHZ, >25 db loss below 300 MHZ will eliminate VHF interference when reading UHF, useful for cellular.

Everything is like new, and though it works fantastically and is an amazing device, it has had little use.

Scout 25 and both Startek filters: $260 includes shipping

The only pre-programmed scanners I've seen/owned are the Bearcats.

The freqs & search ranges are pre-programmed in a ROM.

Some scan through all the freqs for the US in a certain category (Police, Fire, etc.), others allow you to enter the name of the state you're in to be more selective. For categories like air and marine, a freq range and step us used, not a freq list in ROM.

As far as I know, there is no way to update or upgrade the ROM in the Bearcats. I'm not even sure if the ROM is external to the microcontroller.

I would like to see a scanner with this capabilty. Wouldn't it be nice to have replaceable ROMs and/or PCMIA cards that could be swapped out? I've thought about doing a memory mod on a base scanner using a PCMIA memory card and socket. Unfortunately, I haven't felt ambitious enough to do it yet. I guess once you get that complex, you might as well just get a computer controllable scanner and keep freqs on a floppy to download!

In general, any scanner can be retrofitted with CTCSS. It is not likely that Uniden CTCSS boards will work with any but their own labeled scanners. Definitely not the PRO-2026 and BC-760XLT. I don't know for sure about the BC-9000 and its equivalent, but I'd bet not.

However, any of the commerical (and low cost) CTCSS decoder/encoder boards can be retrofitted to most any scanner.

The article was from 1990 for one. Two, I didn't read it and
therefore have no interest in replying to it. Katz used it as a snide
swipe at me. Quite interesting.....there is a serious flaw in the
paragraph.....about as obvious as prunes mixed into a box of raisins.
The flaw is serious enough to render Katz' oh-so-intelligent rebuttal
and slam rather impotent and ineffectual, not to mention...nescient.

THAT is the extent to which I wish to address the issue. A 1990
article is not worth my attention or reply. I did not conjur it up to
use as a "weapon" in a losing argument. I did not cite it. I do not
have or care to have the original. But whoever did conjure it up or
find it......COULD have....and SHOULD have picked a better one for
their defense/offense. The above is so flawed that it is nonsense and
foolishness.

Before I bother to point it out, I wanted to afford others the
opportunity to read it again.....and "save face" by spotting the flaw
for themselves. I mean, it's REALLY stupid. Not just a casual error.

:-))

That's somewhat true for the models which don't program by state.

I believe the FCC allocates different VHF-low band
frequencies to state police on a state-by-state basis
to avoid interference. Illinois State Police use the 42 - 43 MHz
range on VHF-low band.

Too, the UHF T-band (470 - 512 MHz) allocations are different
in different parts of the county, as parts of the T-band
are used for television (hence, the nickname "T-band").

Scanners which are are preprogrammed by state (e.g., Uniden BCT7),
scan the channels allocated in that state. For example,
people in Illinois don't want to waste time scanning
the 500 MHz range.

The Regency K-500 scanner was one of the earliest models
with (non geographical) Service Search. The user manual
actually listed the preprogrammed frequencies. Too bad Uniden
doesn't document the preprogrammed frequencies.
They contract with an outside consultant for this information.

For more information on the development of Service Search, including
patent citations, see my BCT10 review in July 1996 Monitoring Times.

In our little city of Boise, these coordinates refer to a map book
section, e.g., "Units respond code-3 to a 10-50 P.I. at Franklin and
Milwaukee, RD47"

or

"Engine 8, Medic 56, Chest Pains, 710 Vista, cross of Cassia, Map
Section Paul 38 [p38]"

Guys, I don't think you realize what a frequency counter is. It is a device that is designed to detect NEARFIELD signals. These signals also have to be strong enough to be above the RF noise floor. If you are in a very noisy area(rf noisy), you cannot possibly hope to pick up a low power signal.

First point, cordless phones and walkie talkies transmit around 500mw, usually even less than that. Compare that with the kilowatt towers for broadcast TV, broadcast FM that are generating a high floor.

People complain about 'my scout is getting flooded with pager signals'. Listen, these pager towers use at LEAST 500 watts. How do you expect the scout to know you DIDN'T want to pickup the tower? Is it psychic? The scout is DESIGNED to be broadbanded, that is pickup 10mhz - 2.8ghz. In order for it to be more sensitive in one area, or limit reception in another, you must use filters and antennas of a particular length. I would much rather the scout be too broadbanded than to be limited.

As far as frequency accuracy goes, as long as the signal is of some considerable strength, it's accurate to 100hz easy. If you expect to pick up some low power (1/2 watt or under) from more than a few feet, yes, it's not going to be accurate to 100hz.

I don't mean to flame but I hate to see such injustice done to a terrific product.

It's like someone who buys a Phillips head screwdriver and then complains that it doesn't work on flathead screws. Seeesh.

Keith

P.s. I have no affiliation with Opto or Opto dealers.

Some of the newer triple conversion scanners, like the portable
Radio Shack PRO-26, are prone to receiving images in the VHF
high band despite having a high 1st IF (e.g., 380.7 MHz).

The new 200 channel Radio Shack PRO-2045 can be fitted with
an optional CTCSS decoder board. The board is orderable through (but
not stocked by) your Radio Shack store . Both appear in the new
1997 Radio Shack catalog.

Gary

Hi,

My name is Gary,
I have for Sale or trade a Yaesu FT-101E hf radio,
This radio is in excellent shape and has been gone through
two months ago. I spent 240.00 on the repairs to make this radio
a like new rig. I have since upgraded.
This radio has new finals, external VFO (FV-101B), CW filter.speach processor
and built in power supply.
I am asking 300.00 cash or a trade for a duel band vhf/uhf and would be
willing to kick in some cash or trade for a good full coverage,high speed,
handheld or base scanner.
If interested, send me a packet or better yet a E-mail.

*** Bob's Tip of the Month ***

(from
Monitoring Times, January 1993, Dial 1-800-438-8155, Great Magazine!)

Realistic (R) PRO-39 Cellular Restoration (Page 107)

[with a few c
omments added by someone who witnessed such restoration -jqt]

The
recently released PRO-39 handheld scanner from Realistic (R)
is a fine
performer, but its 800 MHz range is interrupted by the
factory censoring of
cellular frequency coverage. Long-time MT
supporter Larry W
iland of Youngstown, Ohio, would like to share the
simple fix. Remember,
however, that it is unlawful to listen to
cellular phone calls.

(NOTE: These procedures may void your warranty. Do not attempt
them unless
you are familiar with small component soldering.
Monitoring T
imes accepts no responsibility for damages resulting from
attempting this
modification.)

TOOLS NEEDED: Fine-tipped soldering iron, desoldering
wick,
small Philips screwdriver, long-nosed pliers, rosin-core solder.

(1) [Turn off your radio. Removing the batteries when the radio i
s ON can
erase the memory! -jqt] Remove the battery door, holder and
[battery
pack] from the bottom of the radio.

(2) Remove the four screws
from the back of the scanner and carefully lift
the back off.

(3) Unplug
the two wiring harnesses at their connectors and remove the six

bright colored screws [that hold] the circuit board in place. Unsolder

the ground wire from the lower right corner of the circuit board.
Unsolder
the two wire connections from the BNC antenna connector at the
board.
Carefully lift the board (grasping it near the Molex connector)

and set it aside.

(4) Remove the two bright colored screws from the next
circuit board.
Carefully unplug the two-wire connector [and remove the
board, as I
recall -jqt]. Unsolder and lift the rectangular metal shield
exposing
the diodes.

(5) Carefully unsolder and remove d
iode D6 only; this will restore the
missing cellular frequencies which can
be searched in appropriate
30 kHz steps.

This completes the
cellular restoration. Reverse all procedures
to reassemble the radio and
test it by entering any frequency between
869-894 MHz. [If
you are as lucky as I was, the memory will still
contain your other
frequencies! -jqt]

Curious about the other diodes? D4 would enable
68-88 MHz
coverage, but deletes 30-54 MHz; D5 (present) allows 800 MHz
band
operation; and D7 would make cellular spacing 12.5 kHz (inc
orrect).

Thanks Larry!

I think you may have missed something here. Yes static will discharge
from different points of a vehicle. This is not the point. It is the
static buildup or discharge on and through the receiver antenna to or
from the radio that is a concern. It is the static here that can
cause damage and noise to the receiver. This static electricity is
many times greater in voltage then any reveiver was designed to
receive.

I was not talking about preventing static buildup on a vehicle.

Back in August of '94 we had two police officers shot in one day, less than six hours apart. The second officer killed was a k-9 patrol officer off duty and heard about his fellow officer killed and volunteered to help search for the scumbag. Both he and the dog were killed that day. I'll never forget some of the radio traffic heard that day and some of the emotion heard in the voices of the officers. This all happened in St.Paul,Mn. But a few years earlier the city of Minneapolis had an officer killed in the line of duty while on his break at a local restaurant. He was killed while sitting at a table and was shot in the back. The person sitting with him, not an officer, got on his radio and called officer shot and gave the location. In both cases all suspects were found, tried, and convicted of the crimes. Heres to the memory of all peace officers killed in the line of duty.

I'm in search of a operators manual (or copy) for a Tennelec Memory Scan MS2 programmable scanner. That's the one that has all those goofy codes that have to be programmed to determine operating frequency. This thing is usless without it, and I can't find mine :-(.

Can anyone help? If so, please respond via email. Thanks!

When did Part 97 start requiring people to use the lowest power setting all the time? I believe you're referring to 97.313(a), but you're apparently misreading it. 97.313(a) says "An amateur station must use the minimum transmitter power necessary to carry out the desired communications". There is a difference between 'minimum transmitter power' and 'minimum transmitter necessary to carry out the desired communications'.

I don't disagree that minimizing RF exposure is a good thing. I just don't agree with this reading of Part 97. Using the lowest power setting without regard to the ability to carry out communications might be considered 'liddish' by some ;-).

To: All

Well, looks like we found another forger.....

Little Danny Browning of [dannyb@usit.net] seems to have been very busy of recent times. Check out the PATH of the following header, and then check the paths in Danny Browning's posts! There have been a number of John Mackey posts that appear forged, too....all with USIT.NET in the path. Lots of USIT.NET stuff here lately, none with Danny Browning's name anymore..... See further below for why not.

:-))

> Path: optional.cts.com!newshub.cts.com!atmnet.net!news4.agis.net!

You guys might remember that little Danny was one of the vociferous ones until I observed in one of his posts that he 'fessed up to listening to cellular conversations over his scanner. Suddenly, the lad went silent on the group. But not really......

He has forged a number of posts here since......as well as some on other newsgroups...like the ALT.PERVERT.* groups, fer instance. One of his recent forgeries on this group was the one from Morgan Davis, my ISP.....ostensibly soliciting complaints against me.

> Subject: (Bill Cheek) Complain to this address

:-))

Anyway, that's it up to the moment. Another forger bites the dust.

Oh, and by the way.....we can get back to scanners and scanning anytime folks are ready.....assuming the low-life, underhanded tricks and vile attacks are about over and done with.

I ain't going anywhere.....I'm on my feet for the count. :-))

Regards to all, especially the patient ones!

I use the Radio Shack CTR-69 and it works very well and was under $100.
If that's the same one your using, try adjusting the volume level and
make sure ALC is on IN. I have mine set as follows:

VOX = LO
ALC = IN
TONE = 3
VOLUME = 3

A friend talked me into buying this a couple years ago, just after they outlawed cell phone reception. I've used it a few times, but it's been sitting in a box for too long and I need money for some other toys now. I'm in the Los angeles area.

I'm hoping to get $400 for it. Does this sound like a reasonable price? any advice is welcome and of course, offers are too. please tell me if this is too high or too low. I'm not a scanner fan so i haven't kept up with prices. thanks.

I have no reason to Forge A post. Everyone on here knows you are a trouble maker and you just keep proving it. My name DOES NOT apear on that header anywhere.

I quit arguing with you because I hoped that you would disapear but I see you are still here makeing things up and causing problems! I cant beleive you spend every waking hour arguing back and forth with every body who opposes you (which looks to be a pretty big deal).

I told you once I have nothing to say to you. The only reason I am responding to this is because you or someone else is trying to smear mud on my name. You are a very inteligent man but you act like a teen age KID!

MY SIDE OF THE STORY!

Oh yea and for those of you who dont like me complain to my ISP
http://www.usit.com

For those of you that dont like Bill complain to his ISP
http://www.cts.com

Is that fair Bill?

>Engine 1: "Engine One to Dispatch, we're turning onto the
>dirt road, there are several houses here, which house did you say it
>was?"

>Dispatcher: "The one that's on fire. It should be on your left"

I heard this one a while back:

Dispatcher: 50 respond red to Tim Horton's Donuts at <some street address>.

Ambulance 950: probably some cop choking on a donut, eh?

<Dispatcher continues to try to update 950 on the situation from the
caller, and the paramedic (EMT-P) in 950 keeps up with the cop choking
crack.>

Finally the 911 caller hangs up, and the dispatcher mentions that the
911 caller was the police chief's wife....and no it wasn't a cop.

In our city, 911 goes the police department, and if its ambulance...the
call is forwarded to Ambulance dispatch....the caller can hear everything
the dispatcher hears and says.

1990. AR 8000 IF filter replacement

Newsgroup: rec.radio.scanner
Date: 1996-08-20 00:00:00 UTC
From: Gregory Ottria <gottria@mail.earthlink.net>
Message-ID: <321A5E3C.415C@mail.earthlink.net>
Source record: 225904

Does anybody know where I can buy a Murata Erie filter, part# CFWM455D. Most of the distributors sell them in boxes of 100 at $2.75 EACH!!! I have found several filters of the 455D family but with different pin layouts. The CFWM455D is an exact replacement for the one in the 8000 to help reduce the audio clipping problem.

I believe it is Scripps Howard. Keith Rowland replied to me telling me
that they didn't have 2-way yet, but were trying to get a freq. from
another TV station, and that they were relying on cellular for the time
being. One of my former students will be getting an internship with
KNXV, and I have asked him to look around for me when he gets there,
but that was before I knew that they didn't have 2-way.... We'll see
what turns up....

: I think you're right, because while most episodes
: took place in daylight (easier to shoot), there was some
: night action.

According to the LAPD unit designation scheme which I have here in front
of me, 1ADAM12 would be the second two man unit on morning watch out of
the Central Bureau, which is in Dowtown Los Angeles.

1=Central Station
Adam= Two Man unit
1=Morning Watch (2=Day watch, 3=Night watch)
2=Second car

And the Los Angeles County FD *DOES* have a station 51 now. About a year ago
they re-numbered fire station 60 on the grounds of Universal Studios to
FS51. They operate an engine company, squad and a patrol unit.

Los Angeles City Fire Department Station 51 is located at Los Angeles
International Airport and has the only non-red pumper in the LAFD
inventory, it's yellow becuase of FAA regulatiuons.

Ventura County Fire Station 51 is located in Oxnard.

Hi,

I have a Rayovac Renewal recharging system and have had pretty good luck with it. Recently I purchases a Saitek EEC Compact charger which will recharge regular alkaline batteries as well as ni-cads. I have not had the system long enough to determine if I come out better with this than with the Rayovac system (1st set of batteries in my scanner), but am wondering if anyone has had good/bad experiencies with these systems for recharging regular alkalines for use in their scanners.

Would appreciate any comments.

> buisness its a 4th degree offense. Which of these is true?
>
> Thanks in advance

Several years ago the law pertaining to mobile use
of radios capable of receiving police and fire
frequencies was revised. It now is a crime to use
such as radio (including a scanner, of course) to
facilitate the commission of a crime OR the violation
of ANY law. So if you don't commit a crime or violate
any other law you're OK having a scanner in your car.
However, if you use your scanner to keep tabs on
where the police radar units are, and you get
stopped for speeding, the police could make a case
that you were using the scanner to facilitate the
violation of the speeding laws. You don't want to
get slapped with criminal charges along with your
speeding ticket!! So be advised.

Yes, the unit designation "1-A-12" WOULD fit into the LAPD's numbering system, HOWEVER... though I've listened to them since the early 70's, I have NEVER heard "12". I've heard "11" and numbers above "12" but never "12". They really wouldn't have picked a "real" unit number for the show.

Just like with the (crappy and unrealistic) "LA Firefighters" show, which for some strange reason was renewed for the fall season, there is no such station number in the LA County Fire Department as they depict on the show. And, though I wouldn't swear to it in court, it would be a safe bet to presume that there was no real badge number "714" in the LAPD, either, as was "Sgt. Joe Friday"'s in "Dragnet". They just don't use real numbers.

Actually, back to "Adam 12" (how did everyone start calling it "ONE Adam 12"?), there really IS a "1-L-90" as EVERY station has an "x-L-90".

Tom,
Its a wonderful scanner. You will be very pleased with this investment. I have 2 or 3 of them. They are small, portable and easy to take room to room. The second delay may be selected per channel. The unit is similar to but not the BC760. No pl boards may be added. If its a newer model it cannot be modified for cellullar. Still a swell scanner for public safety, cordless, etc.
Buy it, they won't last.

Mutual Aid? Perhaps. However, in "Adam 12", Malloy and Reed never worked with the Sheriff's Dept. or CHP; Ponch and Jon never worked with anyone else (except for a few episodes where they worked with LA County Fire Paramedic unit); on "Emergency", even when they responded to calls in the San Fernando Valley (which is LA City Fire territory), they were by themselves. You never saw "City" units there, too.

Truthfully, all those shows would be pretty boring and short-lived if the principal characters limited what they did to a normal assigned response area. But, then, the little grandmother in Peoria wouldn't be able to tell the difference, anyway.

A terribly misdirected group. May be so may not be so. Do you have any
facts to show that rf is harmless. Have you ever been in the near field
of a broadcast antenna at 1KW even. I have, not the facts or figures,
but by personal experiance know that the inner ears heats up at a
frequency of 1450 Khz and 1000 watts if you are there for any significant
period of time (ie. 30 minutes or so) Granted, amateur transmissions are
usually short, but would you like a 4 El beam being fed with 1.5Kw pep rf
pointed at your house???? I think not if it were your neighbors
antenna. Do not poo poo the harm that non-ionizing radiation may or may
not do. It is best to treat it with a little respect and use good
engineering practice at all times. Hey, a well meaning, but misdirected
group got a law passed because no one else has been able to prove them
wrong with hard facts and figures. I for one, after spending a few years
in the position of a chief broadcast engineer, treat an radiation,
non-ionizing or otherwise with respect. remember your microwave oven
operates in the middle of on ham band a about 1.2 gigahertz or so. And
it cooks things very swiftly. Agreed it is not 3.9 Khz or 7.2, but it
may be that the only differance is the power level and the exposer time??
who know for sure. I don't and have met few rf engineers that are sure.
Who wants to be the test dummy for this one fellows. Do I hear any takers?

Wrong again. I made the repeater & operate it often but it is under
another callsign & control operator. It isn't being operated as my
repeater. Mike Scott always uses his address because he DOES have
an internet address, unlike me. If I had one, I would use it.

you "copyright" frequencies by writing them down correctly the first
time. Otherwise, they are copied wrong.

>> signals too?
>
>Page 12 of the Scout Manual:
>"(Note: Scout (TM) is designed to find VHF/UHF two way communications frequencies and so
>only tunes FMN)."

Note: The Scout manual is lying!

The Scout will very reliably detect an AM signal as long as it is not
being modulated too heavily and falls within the Scout's frequency
range.

There is no difference between an unmodulated FM carrier and an
unmodulated AM carrier and the Scout will detect them both.

All you've compiled is the result of a popularity contest, one that is tied to the circulation of these publications and which has nothing to do with quality, integrity and so on. MT is bound to be ahead of WSR simply because it has more readers! How is this info useful to scanner hobbyists? Why haven't you at least included the number of votes each publication received?

Why not do a survey with some meaning? Determine what you think editorial quality, integrity, accuracy, production value--whatever--is worth and attempt to measure that?

Your survey does no one--hobbyists or magazines-- justice. It doesn't even reflect what percentage of these publications actually cover scanning. WSR and USSN are 100 percent devoted to scanning (every article is related to scanning); in comparison, MT and PC are only 20 percent devoted to scanning (two articles out of 10). Those are arbitary numbers--I did not do an actual page count--but they're probably not far off. USSN on that basis is a far more worthy publication to hobbyists than PC or MT.

What about editorial quality or integrity? MT and PC exist for the benefit of their advertisers first and their readers second. The one thing you can say about USSN and WSR is that they don't kiss anyone's butt and are aimed at providing readers with truely useful information.

To include Grove's web site among a list of magazines is hardly worthwhile. Who sent that vote in? Bob Grove?

I have looked on my FCC Masterfile CD-ROM also..did not see a listing for
KNXV television..maybe it's under the company that owns the station...is
it Scripps Howard ??? All the other Television orRadio Stations list
either under the Station call letters or the Station's owners name.
I would bet that KNXV is somewhere in the 450-451 or 455-456 news/remote
pickup band...don't think they are in the 160-161 or 170-174mhz area
judging by the looks of their communications antennas....don't think they
are in the 800 or 900mhz area either!

Gentlemen, and I always use the term loosley as I know how I amc
Compliance with any rule or law is needed in a society of strange
creatures the likes of wich we indeed are.

Seriously, can any of us state without a doubt if non-ionizing radiation is
harmful or not???? Folks in the past thought that driving a car on a
sunday spin or sight seeing trip was safe also. Just look at the record

of peoples killed in auto accidents to shoot that theory down. I know, it isn't the same thing, but no one can tell us yay or nay if radio waves will do permanent damage to your neighbors or not. So why not take that extra precaution and put together a system that has preventative measures in the first place, then later on you may be one of the few amateurs still operating out there. Another thought entered my mind (hmmmmm, musta left my mouth open again and one of those pesky things snuck in) about something called "good engineering practice" when building any piece of gear. You wouldn't leave your high voltage tank circut un-protected so that a member of you family could stick a finger in it now would you. (the question is, does the electricity kill you or is it your reaction to the high voltage that does the deed?)
Just a few thoughts from a former broadcast engineer that went through this 10 years ago. (including having to try to deny access to surrounding public lands adjacent to the 100K FM transmitter site.) Wether we agree or disagree with the rules, remember, the FCC and EPA and local and Federal government make the rules and can shut you down right or wrong if you infringe upon them. Also, by having a national standard we will be better off than if every Tom, Dick and Harry has a differant standard that we have to try to follow. So there is no cowardice in following the rules to protect your own hide from bureucratic invasion into your shack and the removal of your equipment and some of your hard earned cash from your person.

Collin County (TX) Sheriffs dept. is currently programming a GIS database with all the rural addresses in the County. Long range plans include installing GPS units in the patrol cars to improve dispatching control and response times. Many of the officers are unhappy about this as their location will always be known and tracked. The combination of GIS and GPS will allow dispatchers to locate the officer closest to the call, and the shortest path for him to get there.

2031. Re: AR8000 & Scout

Newsgroup: rec.radio.scanner
Date: 1996-08-20 00:00:00 UTC
From: kamst39+@pitt.edu
Message-ID: <4vckpc$d6i@usenet.srv.cis.pitt.edu>
Source record: 225960

Jim,

: The advertisement I saw for the scout, shows the scout picking up Emergency vehicle transmissions and
: "Reaction tuning" the AR8000, using the supplied "mini antenna". NO WHERE did it state, NOT TO BE USED IN
: HIGH PAGING AREAS, or SPECIAL FILTERS REQUIRED, or SPECIAL ANTENNA REQUIRED. I wish I would have known that
: this $440+ device could not be used in highly populated areas.
: >

Jim,

I have had no problems and good results using a dual-band antennae
that was supplied with my radio. I've picked up passing Ambulance, Police,
cell calls, etc. I even picked up a direct hit off the local police repeater.
I've picked up Mall security, drive-thru's, and parking attendants HT's. All
using a 4 inch dualband. I suppose the surroundings greatly affect the
performance. I live in a fairly big suburban community of Pittsburgh. I
also use it in downtown pittsburgh and it works just as well. Agreed the price
is quite steep and I waited until I found it used before I bought it.

: This last weekend I purchased 2 "tuned" antennas for the frequencies I would like to use the scout
: with. One gave me the exact same results as the "mini-antenna". The other antenna picked up nothing.
: I tried these antennas on my way home from a Hamfest near downtown Chicago to a rural area about 50 miles
: outside Chicago. The Scout NEVER "reaction tuned" anything with a voice transmission! So far its been about
: a month, and I have never captured a voice transmission frequency.

: The product may be "terrific", but I have yet to see it work once as it was advertised. My final option is to
: spend more $$ for filters ($33 from mini-circuit or the limited supply from Opto which seems really expensive)
: and hope that it works. This is beginning to be a real money pit device. Sorry to be so down about the Scout,
: and I don't mean step on any toes, or "flame" anyone, but I think for the price of this thing, I am very
: disappointed _so_far_. Opto should clarify that certain options are needed for certain areas or some such
: disclaimer, because I feel thier AD is very misleading.

Yeah, perhaps Opto should be more careful about their ads. I really don't
think their AD is misleading though. I had no problem doing what they said

you could do, right out of the box, with no filters or special antennas.

: -Whew! had to get that off my chest. Time to lighten up. :) -Jim

Good day to you, nice chatting.

Keith

Hi John,
This thread had to do with the L.A. machine. Seems every chance you get
you call attention to you owning the 435 Portland repeater. Nothing can
be done about that, but the real problem I have with you is your anonymous
postings under the guise of "surprise2@where2.edu" - here was your latest
crude remark from that "address":

> > Eat sh*t and die Burt.

> How the typical gutless ham responds.

Burt Fisher you are a PUSSY so shut the fuck up.

You are dumb too.
------------------End John Mackey KA0SSF's anonymous post--------------

That particular post came from onyx.indstate.edu with the Organization
line reading "Myself & I-2." Your current "I own the Portland .435
repeater" came from biosys.apldbio.com with the Organization line also
reading "Myself & I-2." Both articles contain the address
suprise2@where2.edu, only this time you were actually dumb enough
to sign your name and callsign. I guess we should allow the possibility
that someone forged your name and call ("yeah, that's what happened")
but I believe that the accused is burdened in proving their innocence.

Prosecution rests.

Jeff KH2PZ

P.S. Any licensed ham can become a rptr owner - there's no virture
in that - and practically any transceiver can be made into a crude
rptr. Thus, you hold no special significance in the amateur community; but
now among the internet community you are scum for not having the courage
to use your real address to accompany your remarks.

: license. That would only give you about 1/4 mile. You might want to
: check the law pertaining to rebroadcasting also...may be a problem!

: Bill Crocker

Just a thaught.

I there is a problem of being legaly restricted to 100-MW.
Are you allowed to transmit this 100-MW through a directional
antena.

This would greatly improve the range, but obviously only in one
direction.

Richard.

I have had my SC150 for about 4 years and I love it. It is a good scanner. You can pick up cellular phones without having to do any modifications. You pick up their images around 894.xxx to 916.xxx so you don't get the actual freq. I have no complaints and would reccomend the SC150.

OK people
This has been a problem for a while now!
I have been pesonally attacked several times from Cheek and I have seen the only way to get rid of him is either pay a hit man or complain to his ISP over and over.
Since I cant afford a hit man thats out of the question!

So all there is left to do is, complain to someone that can do something about it. I bet you all remember the way it was about 2 months ago. You never even heard a word about B. Cheek. Lets make it like it was before.

Those of you who support Cheek need to calm him down! He is suppose to be a professional. I have been told he writes articles in magazines like "the Monitoring times" and a few others. Don't forget Commtronics which from what I have seen is a pretty honest business. Its a shame someone with so much smarts spends every waking hour replying back to every e-mail message posted with his name in it and others which don't.
He once commented he only sleeps from 2 am to 6 am. This is why hes always grumpy. I would sleep with one eye open if I pissed off as many people as he has. This reminds me of the cb days where they always were fighting and want to meet somewhere. But if you went nobody ever showed up......just a bunch of talk! Just a buch of BULL!

What I'm getting at is this: If Bill Gates got on here and attacked people like Cheek does don't you think that people would boycott his butt? Hell yes they would! Microsoft would see a drop in sales....might not be a big one but a noticeable one and Bill Gates would soon get a ugly immage with the public.

Cheek is like that one little terd that won't go down the toilet until the third flush.
The only way to get rid of him is to keep flushing....and heres how

http://www.homeport-sd.com/feedback/
this is where you complain. fill out the info and make sure where it says "whats on your mind" click on it and find COMPLAINT.

If that doesn't work just email this guy. He has seen many complaints so far!
mailto:mdavis@king.cts.com

If none of the above works then use these.
mailto:support@cts.com
or
mailto:billing@cts.com

Those of you who disagree with me have every right to. Look how many followers Hitler had! He still went down in the end! By his own hand.

Get off you ass and do something!

That's what Bill DOES NOT like any one else's view that does not fit
with his views. He prefers ass kissers, which you must be to stay
on his echo.

That's why this thread "Why does everyone hate Cheeks" is the most
popular
thread on any of the REC.RADIO.xxxxxxx newsgroups.

> > topic.... and POOF! Bill (This is my echo and I am GOD) Cheek, should
> > really read the constitution, and what it says about freedom of

Oh really now, do tell?

> My name DOES NOT apear on that header anywhere.

So? Most forgers don't put in their real names. Your REAL name was on the post where you admitted to listening to cellular conversations and to tracking the telco's cell sites. THAT was interesting.

> I quit arguing with you

You never did argue with me. You went underground and behind my back from the git-go.

>The only reason I am responding to this is because you or someone >else is trying to smear mud on my name.

I think you've smeared it enough yourself. You are one of the forgers beyond any reasonable doubt. Your fingerprints are on your work. Are you aware that your log-on times and dates are recorded by the ISP? You are the ONLY poster in this forum from USIT.NET.

There's more, too, Mr. Browning. It would be a good idea if you would not dig a hole for your own self. I don't care whether you ADMIT it or not. If you keep denying it and keep posting the forgeries here (and elsewhere), then.....do so at your own risk. Fair enough?

>Oh yea and for those of you who dont like me complain to my ISP >http://www.usit.com

Make that USIT.NET not .com

>For those of you that dont like Bill complain to his ISP >http://www.cts.com

>Is that fair Bill?

Sure pal. Fairest of all is for you to stop the forgeries and other harassment of me.

Understand?

FYI - The August issue of Monitoring Times has an article titled "Fastfood smorgasbord". Its an article by Bob Grove, with assistance from Bob Eisner (and a few others here) that has all the fast food freq's, PL's, etc. Plus, it gives some background on monitoring, and what not. It's pretty nice, might be something people want to check out.

Keith

P.S. I had to hunt around to find it. I found it at Barnes and Noble, if you have one locally. I believe Borders Book Store also carries it.

Ref: Environmental Impact Reports...

Over the years, we have noted that there is a group within the
Environmental Agencies that tends to go bananas! To acquire
funds to increase staffs, set up new departments, etc., these
groups will go to any lengths to stampede the people, members
of Congress, into a tizzy! This is all intentional...they do not
necessarily know that anything is wrong...not enough data,
not enought testing, etc.

Sad situation, in an Agency as important as this one, that we
have these "whackos" still embedded there. They need to
be purged, their agendas are not in line with the real world
needs of an Agency of this importance. Out, out with them!

Recently, the "hole" over the Antartic filled in...ozone
has returned...years ago, some "real-world" Nasa scientist
warned the "whackos" of the Environmental Agency
that their statements were premature and not substantiated
with known historical fact...nor was there sufficient historical
data to make such a statement....however, the "whackos"
message was widely spread by the "media"...it was pronounced
as "fact"...nothing could be further from the truth! We all remember
the hue and cry...the sky is falling..the sky is falling..disaster..
more funds..more funds! Sick situation..sick..sick!.

Leonard...

2053. Re: ? Best scanner magazine poll

Newsgroup: rec.radio.scanner
Date: 1996-08-20 00:00:00 UTC
From: pkhartley@aol.com
Message-ID: <4vd0an$5ur@newsbf02.news.aol.com>
Source record: 225982

In article <4vc4lk$qnu@newsbf02.news.aol.com>, malex007@aol.com (Malex007) writes:

>All you've compiled is the result of a popularity contest, one that is
>tied to the circulation of these publications and which has nothing to do
>with quality, integrity and so on. MT is bound to be ahead of WSR simply
>because it has more readers! How is this info useful to scanner
hobbyists?
>Why haven't you at least included the number of votes each publication
>received?
>

If MT has more readers, then obviously more scanner hobbiests prefer it!

>Why not do a survey with some meaning? Determine what you think editorial
>quality, integrity, accuracy, production value--whatever--is worth and
>attempt to measure that?
>

How do you objectively evaluate this?

>Your survey does no one--hobbyists or magazines-- justice. It doesn't
even
>reflect what percentage of these publications actually cover scanning.
WSR
>and USSN are 100 percent devoted to scanning (every article is related to
>scanning); in comparison, MT and PC are only 20 percent devoted to
>scanning (two articles out of 10). Those are arbitary numbers--I did not
>do an actual page count--but they're probably not far off. USSN on that
>basis is a far more worthy publication to hobbyists than PC or MT.
>

If these publications are so wonderful, why don't they have more
subscribers?

>What about editorial quality or integrity? MT and PC exist for the
>benefit of their advertisers first and their readers second. The one
thing
>you can say about USSN and WSR is that they don't kiss anyone's butt and
>are aimed at providing readers with truely useful information.
>

Any large publication needs advertisers to help keep the subscription
price of the magazine down. Several readers find the ads of interest as
well. Especially ads for new products.

>To include Grove's web site among a list of magazines is hardly
>worthwhile. Who sent that vote in? Bob Grove?
>

Sounds like you just don't like Grove or MT!

The bottom line is, people will buy the publication they like the best. This newsgroup is full of scanner hobbiest, so if they "vote" for their favorite publication, then that is the best indication of what the hobbiests find most useful.

Well FWIW, the bestselling mag (of any type) might not be the 'Best'.
Just the most available at newstands and not sold out. i had a hard time
finding USSN and Scanner Journal. PopCOmm is at every bookstore. MT is
not but more available than the first two.
Loved the fact the Grove website listed EVERY place u could buy MT in
your area. The others need this feature.

>fail to charge altogether. Anyone else have good/bad experiences with
>these batteries?

Sometimes these cells develop internal shorts. This causes inability to
reach full charge (the cells get HOT in the charger, and, at least with
the smaller charger, the charge LED never goes out) and poor shelf life
(the cells self-discharges into the short in a matter of days).

If yours exhibit these symptoms, call Rayovac for replacement; they're
very good about this.

Otherwise I've had very good experience with them in low drain devices.

Hi Len,

Good point. My view on the hack is that yes, there are problems with OUR Gov't. Yes we must voice OUR opinion, but I always thought that honey attracts more bees then vinegar.

The hack drove home a msg but how many people were offended by it? I voiced my negative opinion about the Clipper chip as soon as it's existence became known. I worry about Big Brother too but I can't take the hackers course of action, there's got to be a better way.

He certainly caught peoples attention. There were numerous postings and someone even saved the hack to a file (I tried but it only saved the text, too new at this I guess).

http://www.doobie.com/~baby-x/usdoj/

That's the current site of the saved hack. Same info as posted previously applies, it may offend some. Most of the links are active.

From: n5off@aol.com
Message-ID: <4vdmvk$g45@newsbf02.news.aol.com>
Source record: 225994

My 9000xlt has these bugs.

1) on startup, sometimes only 1/2 of the display (top half) displays info. Reboot clears it up.

2) while turning the knob at medium speed, sometimes the frequency will advance in the wrong direction briefly, and then start back in the right direction. Also does this in alpha program mode, and chan mode.

Any ideas out there or like problems?

2069. BC 700A mod/info.

Newsgroup: rec.radio.scanner
Date: 1996-08-20 00:00:00 UTC
From: aa186@freenet.akron.oh.us
Message-ID: <DwEuM9.CDy@freenet.akron.oh.us>
Source record: 226036

I seem to have sight of the post but someone was asking about a mod
for the BC 700A scanner. I forget who you are but here is some info.
you may find of interest that I found on the internet. I don't know
if the mod really works, so USE CAUTION.

UNIDEN BC-700A "800 MHZ" SCANNER

Hits:

+ Compact attractive base/mobile scanner.
+ Wide frequency coverage
+ Pre-programmed POLICE, FIRE, etc. bands.
+ Nice backlit LCD.
+ Fast "Turbo" scan (up to 100 channels per second)

Misses:

- No direct frequency entry.
- Search bands are fixed.
- 12.5K steps in the 800 MHZ band.
- The 50 or so programmable channels are scattered in various bands.

Heartland USA (800-229-2901) sells refurbished units for $129.

At that price this is an attractive unit to have as a second or
"kitchen" scanner. The audio is strong and clear and it is a lot of
fun scanning various services by just the one button. Using just the
included BNC telescope antenna I didn't notice any lack of sensitivity
for listening to signals at various frequencies.

On the down side there's a fair amount of imaging and intermod. Not a
real complaint as I assume that's par for the course for scanners with
this kind of range. If you want real scanner that's what God (I mean
Icom) created the R7000 for.

I recently bought one and seeing as it advertises itself as an 800 MHZ
scanner it was disapointing to find a gap at 870-890 in the coverage.
Fortunately there is a mod to solve this that I have included below.

All in all I am pleased with the unit. I really wish it had
programmable band edges for search mode and some lockouts but I find
myself using it a lot. With the preprogrammed bands like POLICE I am
hearing a lot of interesting calls that I otherwise would not have
thought to program in the scanner.

CELLULAR RESTORATION:
(Modified from Brett Miller N7OLQ's original)

1. Remove the screws holding the case halves; separate them using care to unplug the speaker lead.

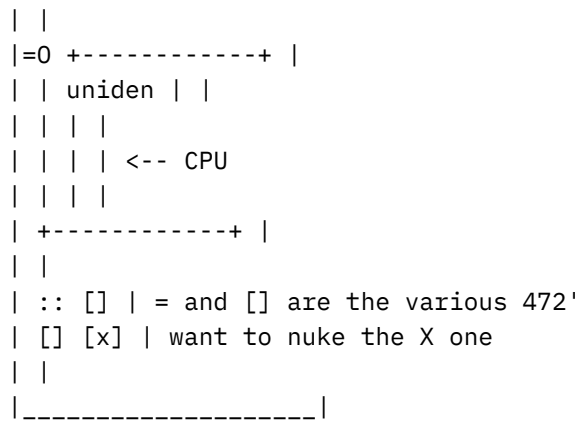
2. Turn the scanner upside-down with the face away from you.

3. Remove the two side screws holding the faceplate; tilt it forward.

4. Find the transparent cable. Using a jewelers screwdriver; CAREFULLY pry up and unplug the cable so that the faceplat can be tilted fully forward. Or alternately take out the black cable and tilt it the other way.

5. Locate the copper/plastic shield under the faceplate; unsolder and remove it.

6. Remove the resistor marked "472". There are 3 of these near the CPU. You want the "middle" one.



In removing it usually you can touch both sides of the chip with a soldering iron and have it lift up by being stuck to the tip of the iron. Be carful not to apply any force to have it lift the etch.

7. This completes the modification. Plug the cable back in place and test the scanner by entering 870.000 (channel spacing will be 12.5 kHz; not 30 kHz.

8. Reassemble the scanner. Be sure to tack the copper shield down again. I am sure you don't want any more internally generated EMI.

Happy Scanning!

> topic.... and POOF! Bill (This is my echo and I am GOD) Cheek, should
> really read the constitution, and what it says about freedom of
> speech.

> Just my 2 cents worth.. (More like a buck and a half) Grinz

More like a pile of shit's worth.........

Are you stupid or do you just act that way? Freedom of speech does
NOT even pretend to extend to FidoNet echoes. By definition, and
by Policy, Fido echoes are moderated and rules are required, and
users have to obey the rules. Or else..... Very simple.

The Internet is an anarchy....no rules. So live it up, if you can,
shit-fer-brains! Just don't fart. You might blow yer goddamn brains
out.

==========

If you haven't decided who is out of line here.. I hope this
helps.

Later..

2073. Scanner Antenna in Attic - Does it need a ground?

Newsgroup: rec.radio.scanner
Date: 1996-08-20 00:00:00 UTC
From: dber@tiac.com
Message-ID: <3218fd31.7651400@news.tiac.net>
Source record: 226040

OK, My base scanner uses a basic RS VHF-Hi/UHF scanner antenna. It has three vertical elements and three horizontal radials and I have installed it in my attic floor about 25' and nearly the same height as my radio. I have used it for 5 months as such without problems but I began to wonder if I should ground the antenna even though it is located in my house.

I know that the main advantage of grounding the antenna is to keep static buildup from happening which may damage the scanner.

(1) How important is it do ground the antenna in the above case? I've heard it told that static buildup is more myth than reality with regards to antennas and radios.

(2) Are the screw-in antennas which attach to the top of the scanner grounded through the radio?

(3) I always unplug my antenna during storms but... can I do anything to the antenna feedline before plugging into my scanner after an electrical storm to discharge it through me instead of the radio? (I know that question sounds stupid). If I just touch the connector will that discharge it?

(4) Do they sell static-discharge connectors that I could easily put inline with my cable? Would I have to run a ground line outside my house and into a large steel rod driven into the ground (not my first choice).

Any help would be greatly appreciated and thanks in advance,

Dave Bernazzani

I have heard from a friend who is an ham operator that if you are a
ham you can carry it claiming it for ham use. in some states it is
suppose to be illegal. Tx is one but I have been unable to get the
law that states it. It is mainly ilegal to listen to law enforcement
and emergencies. that is the reason for the law. so that ambulance
chasers and sight seers will not show up at every call.

good luck

2078. Rayovac Renewal Batteries

Newsgroup: rec.radio.scanner
Date: 1996-08-20 00:00:00 UTC
From: ajax@ix.netcom.com
Message-ID: <4vbjo1$2jt@dfw-ixnews6.ix.netcom.com>
Source record: 226045

I've been using Rayovac's Renewal batteries in my Pro-34 for awhile now. At first, they worked great. I charged them frequently(before being drained) like the Rayovac suggests, but after two or three charges, they seemed to have very short lives. And some of them would fail to charge altogether. Anyone else have good/bad experiences with these batteries?

not real sure where you are from but where I cam from if a cop found
that a reporter had a scanner in his car and was using it to find news
by the police bands he would have it ocnficated. it is against the
law to listen to police and ambulance. be it to chase them to the
"cool" accidents or to get information about a raid they are about to
pull on your drug house. it does not really matter. as to the
criminals listening to the scanner most of them are now stealing
police radios and listening to them.

I recently moved into the city of SeaTac in Washington state. SeaTac incorporated very recently and they now have their own police cars. I am looking for the frequencies they are using as well as local fire and anything else that is interesting to listen to. I wonder if they actualy use King County Police Dept. personel in specialy marked cars? If so would they use the same freqs as KCPD?

Or maybe they are on the new trunking system? Anyone got the frequencies or other info on the trunking system that Seattle Police are using? And is that the same system that KCPD is going to? Enquiring minds want to know.

Please cc me (dan@halcyon.com) with any replies so I have a better chance of catching the messages.

Thanks

I don't think you are going to get very far with Bob Grove...
he's a very independent man and has been through the same
sheeet that posters here are doing with the Cheeks' GUY....
he is just not going to turn much on this suggestion...

This is guilt by association....guilt by being free of political
correctness... guilt by not being YOU.

What is your and other's "jerk-off" agenda? All you have to do
is put the Cheeks GUY in the system and "KILL FILE" him and you
therefore can go back to your world.

To spend so much time on this issue because of "your mind
seeing the Cheeks GUY as SATAN" is really low-level living in the
sewers of each of your minds....

Do us the courtesy and employ your fingers to do the KILL FILE
waltz....it's the answer and I don't really think anyone will
miss your not reading posts by the Cheeks Guy....

DP>>the control channels data stream and *poof*, trunked radio failure. I
DP>>know that most have the back up "failsoft" system but Portlands didn't

I'm not an expert, nor do I play one on TV...but I'll cite a couple
of things in the past. During the great East coast power failure of,
oh, 2 decades ago (?), nearly all of the airport comm went down with
hundreds of aircraft aloft, most of them air carriers. The pilots
kept track of each other plane to plane and nobody crashed. [the FAA
had long had emergency generators for airport lights, but neglected
to mandate that for radios...since been amended] The public safety
services can talk to one another HT to HT, car to car; won't be as
fast and efficient, but they will get the comm through even on a
makeshift go-around "plan B."

I got interested in airways scanning when my manual-tuning Regency
(yech) aero receiver picked up something like "fire in the tower"
from nearby Burbank-Glendale-Pasadena airport. The tower cab was
right above the airport restaurant which had a goodly kitchen fire.
Heard a local news chopper get the scoop on the tower folks setting
up shop from a truck and loaned transceivers from Pac Aero, a big
a/c maintenance company at BUR. The tower was in makeshift-mode for
at least a week but comm went okay (sans radar guidance).

Folks who GET THE JOB DONE will scrounge/adapt/improvise/invent
work-arounds if needs be. There's a few out there who just want to
destroy and harm others. Pity.

>->->Is that fair Bill?

Hey Danny,

Your name does not HAVE to appear on a message header to determine that it's you or not. The message ID and NNTP-Posting-Host lines, which are NOT modifiable by you can trace it back to you in a second (If in fact it is you). It does however seem pretty coincidental that the forger and you have the same ISP. Most of the most recent forged posts have come from that service.

Are you sure that you wish us to write to your ISP (usit.com)? It could possibly be detrimental to your status on thier service, unless of course you're not the culprit.

They will check thier news server and locate those message ID's and can identify who sent them.

Roger

2095. AR 1000 XLT

Newsgroup: rec.radio.scanner
Date: 1996-08-21 00:00:00 UTC
From: jlgraham@mmm.com
Message-ID: <01bb8f97$8debdfe0$9d456382@yellow.diac.mmm.com>
Source record: 225812

I've got a couple of questions that i'm hoping someone can help me with regarding a AOR 1000XLT handheld scanner. I've been borrowing a friends, and might be purchasing it if the price is right! Any advice would be appreciated.

1.) What's it worth? it supports (supposedly) everything from 500 KHz to 1300 MHz including the 800's.
2.) Is it worth it? Or should i simply look into a newer scanner, or older one with more "features"?
3.) Can hams get better "new" equipment that includes the 800 range?
4.) how do i program the 1000XLT? The person i'm borrowing it from doesn't have a manual for it. I'd like to be able to set a "range" of values to scan (say 405.000 to 410.000), as well as say a "list" of freq's to scan. Is it possible with this scanner? and if so, how do i set it up without a manual!!!!

Thanks much,

Jim Graham
jlgraham@mmm.com

Ps., if anyone has a portable/handheld that they think is better than this one and is for sale, let me know. I've been looking for a decent used one for a while now.

Opinions expressed herein are my own and may not represent those of my employer.

>simple and versatile. I use Claris Works, but any spreadsheet would work
>as well.

Agreed.

I use Excel's list features as a my scanner database (A list is a labeled series of worksheet rows that contain similar sets of data. A list can be used as a database, where rows are records and columns are fields.) There is almost no setup-time to invest when using a spreadsheet and look-ups are quick and efficient using autofilter and autosort. Data entry is as simple as you find spreadsheet entry (which I feel is a bit faster than a typical database entry depending on the forms used to access the data) Exports can be done to many different file formats and if the spreadsheet gets too big you can export to a bigger database system. And up to a thousand records or so it's extremely fast. If you needed to store many thousands of records, then Access or another workhorse database engine would be better. I've heard Works is cheap, simple and powerful enough to handle this type of task and more.

Take care,

Dave Bernazzani

> some issues of USSN, there is a writer for them named: RL Smith. I would say
> he was either spying on us or trying to do some damage control.

Now I've got this to say about all that.....

Once upon a time, back home down in the hills, I had me a dawg
that was so dern mean and ugly, I had to shave 'is arse and
teach 'im to walk bass-ackwards so's he could be around folks.

Well, folks just loved that dawg. He was friendly and kinda cute from

'is other end. And all was well, cuz nobody messed with the other
end which they thought was 'is arse, y'see. That worked out real
good and nobody ever got bit or frightened. At night, I had to let
'im eat and do his thing all natural like so's he could get it out
of his system before the next morning broke. That dawg was so dern
mean, he'd turn around and bite 'is own self.....but that was how
he managed, given 'is handicaps of orneriness and butt-ugliness.

Now I'm wondering if'n this here Smitty character and ol' Gehri ain't
alter-ego's along the same lines? Maybe when he was born, his Paw
wanted to take 'im out and drown 'im, like any good Paw would do, for
that sort of birth, but 'is Maw stepped in with a compromise kinda
like me dog, sort of? It was my sister who wouldn't let me drown that
dawg.

Been thinkin' going on a couple of years or so that this poor
feller might be carryin' some mighty awful handicaps through life
and needs a way to let it all outa his system. So he's Smitty by
day and Gehri by night? Or, t'other way around. Maybe he's sufferin'
from an identity crisis and don't know if he's comin' or goin'?

It might not be right of folks to just up and accuse 'im of spying
and doing damage control until either he 'fesses up or makes some
sort of a statement first. Now if he'd like, I can hear 'is
confession, cuz I am an ordained man of the cloth in the Universal
Life Church.

You can be a minister for only twenty bucks, and Pope for a hundred.
I could only afford the twenty, though, but I can still hold funerals,
benedictions, convoctions, invocations, weddings, and confessions.

So do Misters Smith and Gehri wish to cleanse their souls and 'fess
up to any of these here susspeculations, including the one about doin'
charity for the RCMA at the expense of their honorable writers?
That'n is a bad'n, if'n you ask me.

It just aggravates the hell outa me when the dern government sticks
its hands into MY britches pockets and helps itself to me hard earned
money and then goes and gives it to charities of one sort and another.
If Mister Gehri did that to me, I'd take off 'is head and yell down
'is
neck...that's what I'd do, sure enough.

So the least that Mr. Gehri could do is to tell them RCMA folks how
it's really the USSN writers who are bailing out the RCMA and taking
up the slack for all concerned.

Now THAT confession would be good for lots of souls, methinks.

Pax vobiscum,

Bill Cheek

>picking up my local(20 miles away) airport. Not anymore.

Hell yes, it's a decent antenna. The primary drawback is its rigidity
when used on a handheld scanner in a "portable" mode. Some guys broke
theirs. So it ain't like a rubber duckie...otherwise, it's superior.

>Quick question too, on the antenna, it says to lower the portion of the
>antenna below the coil, as transmitting with it fully extended can cause
>damage to the radio because of an improper SWR. Is this BS? Why would it
>damage it?

As the directions say, it can be used as a transmitting antenna on
certain bands. Its adustability, however, means that the resonance of
the antenna can be skewed way out of shape.

When that happens, SWR goes up. The higher the SWR, the more of the
original transmitted power gets reflected back into the transmitter.
Well, power is power. and if it ain't radiated or otherwise spent in
doing useful work, then it dissipates as HEAT.

The transmitter is capable of dissipating only so much heat, above
which it can burn up. So.....SWR is a strong concern for
transmitters, where you want all the power it can generate to radiate
from the antenna and none to go back to the transmitter. SWR is not
nearly so significant for receivers.

And if it weren't for the heat factor, it wouldn't be all that big of
a deal for transmitters, either. Trouble is, when RF is absorbed, it
converts into heat, watt for watt.

>handle this type of task and more.

Agreed, for files smaller than say a thousand records or so, EXCEL or other spreadsheets certainly can perform on a par equal to or better than full-fledged databases.

You're right about ease of entry, though some databases are also easy. The bigger ones need a set up first, after which they can be easy. Exporting is cool....way cool, and is very important if one wishes to mingle with other scannists and swap frequencies. That's where export, import, and format become serious issues.

MS WORKS is a mother of a package for not only the hobbyist but also the small business. The WORKS spreadsheet is a lot like EXCEL with a little less power is all. The database isn't as powerful as the big boys like ACCESS, FoxPro, Paradox, etc, but it is sooooo easy to use that its lack of horsepower is more than compensated. The WORKS database will handle up to 32,000 records, but I suggest about half that as a maximum, unless you're running a 200 MHz Pentium.

The entire WORKS package of word processor, spreadsheet, and database is designed for the little guy who doesn't know beans from apple butter, but who has the capacity to learn and to grow. I still use WORKS even though I also use ACCESS, EXCEL, WORD, and other high powered applications. I use it where I need to do something quick nd dirty and want the job done right now....not later or not after a bunch of setups.

I'll attest that everything you said about EXCEl and spreadsheets in general, is right on the money! Good words.

Mike,

I've found that frequent charging make all the difference. When I let them die (like NiCds), they don't work too well. When I charge them frequently (every 3 months for my use) they work great. I've had the same six in my YB400 SW receiver for 1 1/2 years so far.

The police department in the city I live in use the mutual aid channels a lot. You might check your local mutual aid channels next time they switch to "channel 8". It might also be a simplex frequency so you might want to monitor the input of your known police frequencies also.

If all else fails .. try to scan the frequecy range that they transmit on. More than likely CHANNEL 8 is gonna be with in that same range.

> Adam= Two Man unit
> 1=Morning Watch (2=Day watch, 3=Night watch)
> 2=Second car

My original question was about the Simi Valley Police (That's where I
heard
the call from) I ended up asking a police officer about that and he said
that 1-Adam-12 would be a morning watch two officer patrol, but they
don't
normaly use the 1 before the unit designation because the "1" in "12"
also
designates morning watch and the "2" in "12" designates the beat.

> And the Los Angeles County FD *DOES* have a station 51 now. About a year ago

> International Airport and has the only non-red pumper in the LAFD
> inventory, it's yellow becuase of FAA regulatiuons.
>
> Ventura County Fire Station 51 is located in Oxnard.

I went to a call at a two story house on fire this evening and got some
great
photos! I took some shots of the radios inside both the Ventura County
Fire
Dept. units and the Simi Valley Police units .. I got to talking with
one of
the Simi Valley PD Officers and he showed me all the channels they use
and
how their emergency trigger and encrypted transimisions work .. it was
very
educational!

BTW: If you go to the scene of an accident, fire, etc.. PLEASE use
commom
scence!
1. If your told to go away .. GO AWAY!

2. If an officer has a gun drawn .. you DON'T want to be there! (Duh!)
3. DON'T put yourself between the emergency vehicle and the incident!
4. Stay out of the street.
5. If your taking pictures .. ask first!
6. Don't ask questions when someone is busy doing their job! (Duh!)

I bet bill knows ;-)

I guess its not a spread spectrum 900mhz.....cause I heard throught the
grapevine that these could not be monitored. I have scanned that range
but I haven't heard anything.
Those new 25 channel cordless are selling like crazy. I have stumbled
across a few of those but no 900mhz. Of course I didn't listen to them.

Black Leather case for BC3000xlt FS, with belt loop.

This is the case that's made specifically for this unit and allows usage
of all controls while the unit is in the case.

If you buy it from Uniden directly, it will cost you $25.

I'm selling mine (in perfect, new condition) for $15. + shipping

please e-mail me if interested, or call me at 213.845.0626

Is there no software available to do mods for the AOR 2700?
Seems strange as the price has dropped so dramatically, like there'd
be tons of folks looking for it. I'm quite certain that the
modifications are software controlled. Scancat Gold 6.0 doesn't handle
the mods for the 2700.

Any info would be much appreciated.

Thanks.

I think it is illegal in most states, but not necessarily for the reason stated by Gus, although that may also be part of it. The biggest "ambulance chaser" of them all is the news media, and like amateur radio operators, they are also frequently exempted from the scanner laws. I believe the main reason for making mobile police scanners illegal is to prevent people (ie, criminals) from monitoring the police activities while in the commission of a crime, or flight from a crime. Not that it would make a big difference to criminals anyway... just to be breaking one more law! But its one more thing to charge them with if they're caught I guess.

Also, while amateur radio operators may not be exempted in *every* state from the local scanner laws... many of our VHF/UHF radios have the capability to receive (but not transmit) on the public service bands. Because of this, the FCC made a federal preemption to local/state scanner laws so that we may travel nationwide with our ham radios without fear of having them confiscated. Of course, not all police depts are aware of this, and its a good idea to carry a copy of this FCC preemption when travelling, along with a copy of the amateur license. It would also be prudent to turn off the radio if approached by an officer and not try to "show off" that you can listen in on his conversations... why invite trouble?

From: Tracy Justus <service@pacbell.net>
Message-ID: <321BE3B6.759F@pacbell.net>
Source record: 225843

The County of Ventura is switching over to RED colored units because
red is the traditional color for fire engines and will make them more
easily recognizable as such. The reason there are yellow fire eingines
is because they did a study back in the 70s and found that yellow was
the most easily seen color. With new technology (brighter lights,
reflective stripes, etc..) there is no real need to paint them yellow
anymore. We just got our first red fire engine in Simi Valley (served
by the County of Ventura Fire Department) last month and the rest of
them will be replaced with red engines as the yellow ones get retired.
There are no plans to paint the older engines red though, they will be
yellow until they are retired.

Is it just me, or is anyone else impressed with Radio Shack's handheld scanner antenna? It has a small coil in the middle. I bought it for 10 bucks and I heard it was decent. I am entirely impressed. My low band performance has shot way up. My airband has shot way up too. I used to have problems picking up my local(20 miles away) airport. Not anymore.

Anyone else found similar results? Seems like the best 10 bucks I've spent in awhile.

Quick question too, on the antenna, it says to lower the portion of the antenna below the coil, as transmitting with it fully extended can cause damage to the radio because of an improper SWR. Is this BS? Why would it damage it?

: The freq. inv. is not a problem but what about the FM sideband??
: Does anyone know what this involves as far as the scannist being able
: to hear what's going on?
: Basically,how do I get my scanner to intercept it intelligbly?
: Thanks for any help!!

This is the first time I have heard of FM sideband actually
being used, although I don't see any reason why it wouldn't work.

One method of using AM sideband is to generate an ordinary AM
signal and then cut off the carrier frequency and one set of
sideband frequencies, using a sharp crystal filter.

The receiver also used a sharp crystal filter, to receive only
one set of sideband frequencies. If these are then mixed
electronically with a localy generated carrier frequency, the result
is a copy of the original AM signal.

As far as FM is concerned, I see no reason why exactly the
same tenique couldn't be used. (I don't claim to be an
expert, but I thing I know all the basic ideas). Then Just
put an FM demodulator after the mixer, rather than an AM one.

One possable idea might be to get hold of an old CB radio
that includes SSB. This is single sideband AM, most CB
radios that do this use the tenique I described above, so
I wonder if it would be possable to feed some IF from the
scanner into the CB, use the sideband parts of its circuitary,
and then, either feed it back into the scanner, or mod
the CB to receve FM SSB. Some Export CB modesls include
AM FM and SSB, and don't have any nasty circuitry to stop
you from moding them. The SSB utilises the ordinary AM
demodulator circuit. Perhaps a little fiddling with the
mode switch could switch in the FM one instead.

Just an idea. Don't ask me for any info on how to make it
work though. I'll leave it for the experts to consider
my idea and see if they can find a practicle way of doing it.

Good Luck. You might need it.

Richard.

It isn't that Bill isn't qualified to comment. It's the way he insults
everyone with his "I am GOD" attitude, his lying, his manipulation,
and his games. THAT is what we are bitching about.

> I personally think Mr. Cheek is extremely qualified to comment in this

He does have some good knowledge & ideas, but I don't think I would
describe
him as being "extremely qualified". A regular qualified or capable
would be
more appropriate.

> news group. If you disagree with him, just state your points and
> leave it at that. Many people agree with "Wild Bill Clinton". Does

You should talk to Bill about that. 2 weeks ago a couple guys suggested
a
truce & last week I did the same. Bill continued with his
trouble-making.
Bill has needed to learn a few lessons, his lying & pissing on people
has gotten him where he is at. The lesson Bill has had to learn
is: "If you fuck with the bull you're gonna get the horn".

one of you guano eatin weenie squeezers (oh, wait a minute, *I'm* the
weenie squeezer) can post my e-mail address with in a week! I may even
give some hints, cause I really want somebody to win! ;-)

2134. 900MHz Cordless and new(er) scanners.

Newsgroup: rec.radio.scanner
Date: 1996-08-21 00:00:00 UTC
From: n7ory@primenet.com
Message-ID: <4vfcid$bm8@nnrp1.news.primenet.com>
Source record: 225851

I have a question?

Has anyone happened upon the unfortunate event, of scanning the 900 MHz band and the scanner stopping on a cordless phone conversation?

I had the misfortune, and noticed something interesting. The distant person on the phone was quite clear, but the local (handset) user was often deviating out of squelch, making a difficult copy.

Is there any easy way to widen the front end of the radio to be able to hear these phones a little better? You know, just so I can tell they are phone calls and move on down the band? (GRIN)

I tried WFM, but the signal does not break squelch. The only discernable signal is the handset and not the base, with the squelch all the way down.

Just asking.

No. THAT was not a forgery, Mr. Gustafson. It was me.
There are plenty worse that are forgeries, however.

At one point, I thought you -=might=- not be such a bad
sort, but after the above......my regard for you has gone
on a par with John Mackey, Hugh Duff, and Danny Browning.

Your own ISP might take umbrage at your sniveling, whining,
complaining to *my ISP*.

He recently let me know on no uncertain terms that he did not
run a "complaint desk" and didn't care what the hell you did.
I respected his reply, and we've since become much better
acquainted on a personal level. Somewhere in all this is a
real travesty where you are immune from complaints, but can
issue them yourself with impunity and immunity.

Well, Mr. Gustafson, let me make one thing perfectly clear
to you........YOU are not the moderator, nor even the judge
of what goes into a newsgroup.

Minerva Systems, Inc. does not pay you to determine what is
inappropriate for ANYONE, with possible exception of your
workgroup, *if* you are a supervisor.

You are quite free to read or reject anything at your pleasure
and heart's fondest desire. Use that freedom, and best of
all, use it on your time, NOT YOUR COMPANY'S TIME. Is Minerva
Systems paying you to "net cop" the newsgroups and to read and
play on their time? I doubt it. The issue COULD be raised, though.

The sooner you get that in your thick skull, the better things
will be........for you......for the newsgroup and for our
respective ISP's.......who, as yours succinctly put it....are
NOT "net cops", either.

How about CC'ing a copy of your sniveling to Minerva Systems'
System Administrator, Mr. Chris Offshack at

coffshac@minervasys.com

so he can keep up with your pollyannaish, messianic antics that
are being underwritten by Minerva Systems, Inc.?

: themselves. You never saw "City" units there, too.

On Emergency! they did once run with Pasadena FD on a plane crash into a a
apartment complex. Johnny gets knocked out when the plane explodes, and a
Pasadena guy rescues him. That's the only episode I remember where they
ran with another fire dept.

: Truthfully, all those shows would be pretty boring and short-lived if the
: principal characters limited what they did to a normal assigned response
: area. But, then, the little grandmother in Peoria wouldn't be able to
: tell the difference, anyway.

That's true. What I did find impressive about Emergency was that they
were very often dead on with thier dispatches had 51 been a actual
station. 51 was filmed at FS127 in Carson, and you would always hear
"Engine 36, 127, 116" which are the actual stations in that area.

Well, I didn't get into that because price is so darned variable.
Radio Schloque has their best scanner at $449 but if you wait a while,
you can catch it on sale for $349. Uniden scanners are peddled at all
kinds of prices. AOR's prices are always sky-high because the
cultists will pay it.....like the DeTomaso and Delorean.....

But you're right. And the lower goes the market, the fewer the sales,
and the higher the prices will climb.

> At a time when a lot of us are retireing on a fixed
>income. In my case, I looked ahead and made major purchases before I
>retired. The problem with this is that technology advances, and my
>equipment does not! :-{

That's true to an extent, but one relief valve is take up electronics
and do your own hacking. Most scanners offer some potential for
upgrade or enhancement....especially the better ones from either
yesteryear or today.

> The junk of today is yesterday's state of the art.

No kidding. I'm sitting on a mound of computer and radio hulks from
yesteryear that I can't bring myself to junk. My Pentium 90, a class
act of 18-mos ago is now just an entry-level machine.

My TurboWhopper PRO-2004 from ten years ago will still eat a bunch of
lunches, clean a lot of clocks, and sharpen a slough of plows, though.
It has 25,600 programmable channels in 64-Blocks of 400-ch per Block.
Also a computer interface for automated, hands-off scanning and data
collection; and a host of enhancements from S-meter, center-tune
meter, to logic circuits that assist the scanner to reject undesirable
signals and a grunch more. Sometimes, yesterday's technology can be
kick-started into the future........

One thing for sure, there hasn't been any real hardware innovations in scanners since the emergence of the PRO-2004 in 1986. Lots of firmware and aesthetic improvements. Sizzle. Very little steak. Part of that was due to Uniden buying out Regency, Electra Bearcat and some smaller entities, thereby giving it a majority of the patents on scanner circuits. GRE-Japan owned the rest and gave it their best shot with the PRO-2004.

Uniden still hasn't caught up and GRE doesn't really know where to go from there.

IMHO, of course. :-)

I'll be going on Vacation in Ocean City MD soon and would like to know of some good frequencies for Police, Fire, Lifeguards, and Coast Guard. I'm mostly interested in Coast Guard VHF and/or UHF as well as good marine and military VHF / UHF freqs for the Area.

Thanks
George

He just supplies the tools and knowledge.....he doesn't think he is in
the wrong.
Its sort of like "well I know you are going to kill someone with that
gun I just sold you but I'll look the other way."

But he will sure jump your ass if you say you listened to cell calls! I
would bet a bunch of money that his mega channel 2004 he boast about
picks up cell calls great.
What flips me out is he sells books that tell step by step how to modify
scanners but yet he disagrees with listening to cell calls.......Is he
saying "dont buy my book"

>good/bad experiencies with these systems for recharging regular alkalines for
>use in their scanners.

The only methodical review I've seen was done on the first of such devices
in recent memory, the infamous Buddy-L charger. The author concluded that
is does almost nothing.

There are newer and more aggressive microprocessor-based models out now,
like the Saitek (ECCO) and Remington NU-POWER models. These can have
moeerate success in topping off slightly-used new alkaline cells. If
you're careful about discharge you may get up to 5 extra shallow cycles
out of them.

The Renewals are designed to withstand the pressures generated by much
more aggressive recharging and, as such, can be reused significantly
longer than regular alkalines. They also seem to have a much better shelf
life than "rejuvenated" standard alkaline cells.

I've been to the wars and back. :-)

>1. Could anyone recommend a few different models (used or new) that
>would be good to purchase? [say around the $200 range or less] :)

First, there is no clear answer for you. The problem is you buy a
cheap scanner, and that's what you get. If it does whet your apetite,
then you're hard pressed to do anything because the budget is blown
and no one wants what you got.......

>2. Also the ones that would be listed above, could they be modified for
>cell freq.?

No new scanners can be modified for the cellular bands. The TDDRA of
1994 sees to that. If you want cellular capability, then you have to
look at only certain scanners made or imported prior to April, 1994.
That of all those scanners of which I am aware that are capable of
cellular restoration is as follows:

PRO-2004 BC-855XLT *3 Regency 4030
PRO-2005 BC-200XLT Regency 1600
PRO-2006 BC-205XLT
PRO-2022 BC-760XLT *4
PRO-2026 *2 BC-700XLTA *4
PRO-2027 BC-890XLT *4
PRO-2030 BC-950XLT
PRO-2032 BC-2500XLT *3
PRO-34
PRO-37
PRO-39
PRO-43 *1
PRO-46 *2
PRO-51 *2
PRO-23 *2

Note 1: Date of Mfg code 1A4, 2A4, xA3, xA2 (label in
battery compartment), or no "A" in the serial
number.

Note 2: Date of mfg code 1A4, 2A4, -A3, -A2 (label on
back).

Note 3: Date of mfg code must not end in the letter
"D", except for OAID.

Note 4: Date of mfg code must not end in the letter
"D".

For instance, PRO-43's imported before March, 1994, are
modifiable, while some brought in during March and all
thereafter are impossible to modify. Date codes of any
-A2 or -A3 and only 1A4 and 2A4 are assured of being
modifiable. 3A4 and up probably aren't.

The above list does not include those scanners that were
naturally capable of receiving the full 800 MHz band,
without modification, some of which include:

J.I.L. SX-400 AOR-950 Icom R-7100
Regency MX-4000 AOR-1000 Icom R-1
Regency MX-5000 AOR-1500 Icom R-100
Kenwood RZ-1 AOR-2500 Icom R-9000
Uniden BC-800XLT AOR-3000 Icom R-7000
Yaesu FRG-9600 AOR-8000

Some of these radios, if still current, had the cellular
removed by the factory after April, 1994.

>3. And last, I have heard something about the cell freq. being "imaged"
>on different frequencies, could someone explain this?

Image frequencies are pseudo signals received only by scanners with an
inferior design. The more common image frequencies can be calculated
according to an easy formula:

Image Freq #1 = Displayed freq + (2)(IFfreq)
Image Freq #2 = Displayed freq - (2)(IFfreq)

The more common IF freq is 10.7 MHz, so let's do an example. Suppose
you want to hear a cellular signal on 868.980 MHz, so what freq do you
tune your scanner?

868.980 = x + (2)(10.7)
x = 868.980 + 21.4
x = 890.380

Oops, you can't receive that one, for sure, so let's try the other
equation:

868.980 = x - (2) (10.7)
x = 868.980 - 21.4
x = 847.580

Yepper, your scanner will probably get that freq, so tune to it and
wait for a signal.

Trouble is, 847.580 will receive not only ITSELF, but that upper image
of 869.980...as well as a lower image of 826.180, so you never can be

sure of what you're hearing.

Image frequencies are a fault, never mind that some people use the fault to an advantage.

>I realize that the above questions have probably been answered countless >times, but forgive me I just found this NG recently.

Quite all right.

>Any and all help appreciated. Thanx.

Now getting back to the above.....if you buy a cheap scanner, and like scanning, you're stuck. Unless you have an unlimited budget. If you buy a top-line scanner, and don't like scanning, you can probably sell the rig for a good percentage of what you have in it and bail out.

My recommendation is to get a used PRO-2004 or PRO-2006. If it's clean and working, expect to pay $50-$150 for the 2004 and $150-$350 for the 2006. My favored is the 2004, but some of them tended to develop problems, and it's hard to find a clean good one at an affordable price. 2006's are in plentiful supply and there are no known production problems with them. They are also newer, so expect to pay a higher price.

It's probably yellow because of bureaucratic
inertia, or the cost of repainting an in-service piece of
apparatus before it's retired. The FAA does not require
non-red crash trucks. There is only one remaining non-red
truck at my local airport, and I think it's in reserve.

You stupid fuck, this is America, not a socialist communist country where a person needs the
government to take care of them. Why don't you get a job and get off the mommy's titty.

Do you want the governement to take care of you, or John Mackey Sr. to take care of you forever.

So Bill does something American, turns a hobby into a career or a living and he is evil. Have
you ever heard of Mrs Fields. You were not here for the dumb-ass comment. Nor was PjB but you
both always bring it up. What did the message really say. Shut up!

Yea I guess you could call him the donor of the web page.

I don't think he actually got any offical title like that but
I guess that would describe it.

** >attempt to measure that?
** >
**

The very nature of a survey is to count numbers. Mere statistics will
tell you only the popularity of a subject to those who are aware of it.

Example: If you asked 1000 Americans which car they prefered, a Ford or a
Fiat, I would guess that 999 of them would select Ford, not because they
prefer it over Fiat, just that they probably have never driven a Fiat.

MT & Pop-Comm are as big as they are for several reasons:

1) Financial; They are backed by people or companies that have the
financial resources to weather cyclical business climates and that allow
them to make the investments needed to produce an in-demand product.

2) Diversity; Scanning on it's own is only a small part of the radio
hobby. For such a small group of people, radio hobbiests are very
segmented, and a singular topic magazine will not survive without several
of these requirements.

3) Stick-to-it-ness; The ability and desire to weather bad times such as
in #1 above. If the producers of a product back off at the first sign of
trouble, the we would never get decent products.

4) Competition; M/T and Pop-Comm claim a friendly competition with each
other. This is good for the business, but others are needed to avoid the

duopoly that may be worse than a monopoly.

5) Content; This goes with Diversity. There is a limited amount of information out there. RCMA had a great thing going with it's regional columns, but now what will happen is anyone's guess. National scope magazines such as NatScan, USSN, and others won't get much mileage from the printing of the Public Works channel for East Frostlick MN, since there may only be 4 people within range to hear them. A lot of mileage can be gained by the printing of equipment reviews, technical topics, and other general interest articles.

6) Production Values; Who wants to read something that is obviously poorly written, inaccurate, or of limited value? On the otherhand, a well produced article will keep the attention of the reader.

The RCMA's Journal had a more hometown feel about it due to regionalized columns. It also had a more objective approach due to the lack of substancial advertising.

USSN, if it can overcome its current problems, can capture this feel if done right. It needs to work on accuracy (How long are we going to look at application routing codes in the "Call Sign" field of it's new license lists???)

NatScan needs to polish the product a little, but can be a worthy competitor with work.

MT and Pop-Comm are too general in content to be called scanner magazines. They are Radio Hobby magazines that include scanners.

John-

I think the RS version of the 760 can, but I'm not completely sure.
There is no version (RS) of the BC 9000, at least not yet. The BC 890,
or PRO 2036 also has the CTCSS option, and it works very well.

FYI, there is a new Uniden built scanner about to be released called
the 2045. It has a CTCSS option, but I don't have any info on the
CTCSS board yet, except that it costs $39 and is on backorder (G).

Hope this helps.

If that cord is no longer available, I'm glad I got one while it was!
You might try asking for cat # 274-300, an attenuating adapter; it has
a 1/8" plug, and an RCA jack. Adapter set #274-359 contains adapters
to allow the attenuator to work with 1/8" cords. $2.99/2.99
I also have these, and they work as well as the cord. 40dB attenuation,
according to the catalog.
Hope this helps.

People who don't like the Cheeks guy and then hide behind
their mother's skirts by not posting their real names or
addresses to do it on the sly. No one knows who these mystery
posters are it seems...but, not so, the Cheeks guy knows.

If these slammers are serious and as credentialed as they claim
to be vis a vis the Cheeks guy...then whatever he says is nothing
compared to what they claim is their superior knowledge.

Therefore...these few should form a union and at the stroke of
10:14 am tomorrow all get dressed up in their quasi-military
politically correct dresses and do the best for what will benefit
us all....

Have a ceremony of the spirit....at that time all enter
the Cheeks guy into their respective "KILL FILES"....to keep their
opinions of themselves intact as they believe it to be today and
the rest of us won't have to be part of this banality any more.

OK !!! We all ask you to "KILL FILE" the Cheeks Guy.

You get what you want....no more cheek from Bill
We get what we want......no more banal epithets of no great
importance.

bill conduit
just passing through....

Hello. I was considering the "scanner" hobby and had a few questions.
Maybe someone who is a "veteran" could help me out?

1. Could anyone recommend a few different models (used or new) that
would be good to purchase? [say around the $200 range or less] :)

2. Also the ones that would be listed above, could they be modified for
cell freq.?

3. And last, I have heard something about the cell freq. being "imaged"
on different frequencies, could someone explain this?

I realize that the above questions have probably been answered countless
times, but forgive me I just found this NG recently.

Any and all help appreciated. Thanx.

use the term, 'wonderful' a bit loosely, but yes.

> Hey! Bob Gehri, _NO ONE'S QUIT_! We're currently out on
> strike awaiting payment for services rendered and when USSN pays
> us what is owee to your writing staff, we'll be more than happy to
> _RETURN_ to work. Until then, you got a problem because your
> primary writing staff isn't writing for USSN until this happens.

> But WE HAVEN'T QUIT!
> It's as simple as that!

Whew! I was getting worried about ya, Rog! Yup,
there's a lot of real estate betwixt 'quitting' and
'striking', and I'd venture a wild-ass speculative
guess that striking on account of NO PAY is well
into the justifiable zone.

You guys gonna get down and do some serious picketing?
I've not seen any picketing on the Internet yet, but
what the heck.....there a 'first' for everything, eh?

Then Robert Smith mumbles:
To: Multiple recipients of list SCAN-L

> I am new to this list and I must say that I am close to droping it after
> reading all of the postings about USSN, RCMA and the mis information that
> Mr. Van Horn placed in his first posting.

My, my. Heavens demurgletroy. Misinformation, y'say?

> I am not one to make assumptions, so I called USSN to hear their side of
> the story. It would appier that Mr. Van Horn has streched the facks to fit
> his needs, what ever they are.

Whoaaaaa, hoss..... now the old saw definitely sez to go
to the horse's mouth......but......do you really suppose that
those who stop paying their writers and expect them to work

for a song and a dance....will tell the TRUTH? Whoooooeeey!
That's a mighty brash assumption of your own!

> USSN did not fire any writers. Yes they do owe their writers back pay and
> have promised to pay them by the 1st of the year. As far as they know only
> four writer have quit on their own.

First of the year??? You gotta be pulling my leg! That's
almost a whole dang year of working fer nothin, pal! Shooooey,
doode, you're making it sound like USSN is doing them fellers
a big ol' favor by "banking their money for them"..... maybe
you oughta ask the writers what they think about them sorts
of shennanigans.

> USSN had hoped to keep RCMA alive in it's oreginal state and that is the
> only motive for the merger of the publication.

Sounds to me like USSN is having a hard enough time keeping its
own dern self alive. And you're saying they're being "good ole
boys" by bailing out the RCMA? Seems to me, in my countrified
down-home way of thinking, that they oughta be bailing out their
writers FIRST. Now I could be wrong here, but it sure doesn't
seem too awful likely that those writers agreed to be charitable
philanthropists when they signed on.

> I find all of this very intrsting and can only wouner what Mr Van Horn
> wishes to gain from the mis infromation he has placed on this list. I have
> always spected Mr. Van Horn and his work, that is up to now.

Well, now I reckon Mr. Van Horn is from down in the
hills 'n hollers, same as I am, and learned a long time
ago how to read 'injun sign' and how to track snakes,
critters, cockroaches, and other vermin.

Us country boys learn lots of slick stuff that city boys
don't ever even suspect. Yup, Mr. Van Horn is a busy feller
and ain't got the time to be horsing around without knowing
a little something or another about what he's talking and thinking.

Even if he is eventually wrong, it's a mighty suspicious sort of
a deal for USSN to be charitable to the RCMA and expect their writers
to FUND that goofy proposition. I don't blame folks at all for
wondering out loud what's going on, and for speculating a little.

> If you wish to hear the other side of the story why not call USSN and ask
> them. After all you are passing judgment on the future of RCMA, so, do it
> fairly. Their number is (800) 230-6999.

Maybe it would be a better idea if USSN was to just PRINT where
they stand; what they're doing; WHY they can bail out RCMA and not
pay their writers until after the cows come home; and what exactly
it is that makes them think the writers are happier than pigs
wallowing in mud over the whole affair. That would save a lot of

money on that (800) number and a lot of people's time which is worth more than money. Yessireeee, USSN ought to PRINT the facts and let folks muse and mull it all over for themselves.

Now personally, just betwixt thee, me, and the trees, I sort of think USSN wants that RCMA list because it's good for an infusion of capital. Might be USSN thinks all those RCMA members have cash waving in the air, ready to spend on beads, buttons, and trinkets.

The downright perplexing thing there is how in tarnation USSN thinks it is going to keep its head above the water after the RCMA folks spend all they're going to spend? Then what? The radio market is plumb down in the dumps and there's no good sign it's going to get a whole heck of a lot better any time real soon.

So these are times for tightening up the ol' belt and quit living high off the hawg. Time to make some sound business decisions and keep as debt-free as possible. Time to pay their writers and assure them they're not expected to be charitable donors.

Unless they volunteer, of course.

Yo, Roger? Any of you boys volunteer to be charitable donors?

Been doing a lot of wondering, meself.....

2180. WTB: inexpensive, basic scanner

Newsgroup: rec.radio.scanner
Date: 1996-08-21 00:00:00 UTC
From: zommbee@nwlink.com
Message-ID: <4ve2rf$36o@texas.nwlink.com>
Source record: 225942

I would like to find a very basic, prgrammable scanner that
can do the 'normal' VHF and UHF bands. Nothing at all
fancy or new needed. No cellular or Gigahertz range is
needed. (Ok, sure, they'd be nice <g>)

I just want the normal stuff. I saw a PRO-33 go for a very
low price in this group last week, but missed it :(

Old really isn't a problem. Maybe an older base-station type
that was hot in the late 70's and early 80's. Geez, I don't
know! You tell me what you have and what it does.

This is a sincere request, and I will buy one. I just don't have
alot of money to spend, thus 'minimal features' is in order.
Well under $100 is what I was thinking (the underer the better!)

I saw an old programmable Bearcat at a Hamfest last week for $30,
but missed that one too! That's kinda what I was thinking.

Email what you may have to:

FYI FBI Ventura is 167.585

: > 4-E-34 is a Ventura County Sheriff unit that patrols the east county
: > area, generally the unincorporated areas east of the Conejo Grade to
: > the Los Angeles County line.

Also from Grimes Canyon and the 118 to Santa Susana to the top of Grimes
Canyon Rd before it drops down into Fillmore.

Here's the unit breakdowns for at East Valley off the top of my head

2=Moorpark

2 Adam is Central Moorpark
2 Boy is South Moorpark
2 Charles is North Moorpark
2 Mary 6 is Moorpark College Police

4=County Car (You'll hear 4 Edward and 4 Edward King and 4 Edward Sam. They
used to use the callsign Frank for Simi area county cars but
stopped doing that a few years ago. 4 Edward 34 is the
fourth county car, night watch)

9=Thousand Oaks (I hope these areas are right, they're off a list that's
20 years old at least.)

9 Adam is East T.O. by CLU
9 Boy is East Central T.O.
9 Charles in West Newbury Park
9 David is South T.O./Westlake area
9 George is Ventu Park area
9 Ida is the Boulevard area

9 John is central T.O./Mall area
9 Lincon is a liuetentant
9 Mary is motorcycle unit
9 Ocean is South Newbury Park
9 Paul is parking cadets
91 Robert is a report taking unit
9 Sam is a field supervisor (Seargent)
9 Tom is a traffic unit
9 Tom Sam is a Traffic Seargent.
91 Victor is a "Volunteers in Policing" report taking unit
9 Xray is undercover units.

I think that's close to correct. Back when the list that I have was done, there wasn't I J and O units. I'm just going off where I hear them go most of the time. I think that there is an Ocean unit specifically assigned to Las Casitas. Also, they don't stay in their districs religously, you hear them all over, especially around shift change time. East Valley is on a staggered shift change, so only a few cars come in at a time, while others remian in the field.

walker (sokratys@nando.net) wrote:
: well - if you start hearing calls for

: 15 mary 3

: and

: 15 mary 4

Here in Ventura County they use a really different set-up for CHP. The cars have callsigns like 31-501 and 31-301, 31-401, 31-701 using the station number, 31, the beat number 3, and the unit number 01. If there is more than one car per beat it would be 31-702 or 31-502. To differentiate shifts, although CHP here changes shift all the same time, they'll say "31-501 Days" or "31-701 nights" Most of the time they just call them 701 or 501 or 501 Mary for the motor units.

2187. BC300 Question

Newsgroup: rec.radio.scanner
Date: 1996-08-22 00:00:00 UTC
From: RSC@sruvm.sru.edu
Message-ID: <177EBD23FS86.RSC@sruvm.sru.edu>
Source record: 225599

Greetings to All,
I have a simple question for all of you
BC300 owners. Is there anyway to program the same
frequency into more than one channel ?
Now before ya' all start snortin' and
grumpin' 'n groanin' I have a reason to do this. I
like to group some of my favorite frequencies by banks
according to the locality that I'm in. And, of course,
sometimes there are duplications of frequencies (ie:
County Fire).
I looked at the owners manual and all
I could find was something that said that if a
frequency was already programmed into a channel, the
scanner would indicate this by showing the channel
number. My question is, "Is there anyway to over ride
this feature?".
Thanks for any help you can provide
and taking time to read this.

I used to have an AOR1000XLT. It performed very well. The problem was that it was quite difficult to program and use--not at all intuitive. Without the manual, it is really a pain (even the "Japenglish" manual did a lousy job of explaining how to use the scanner). Unless he's willing to sell it for dirt cheap, I'd go with the AOR2700, which replaced the 1000XLT. I understand that some places are blowing them out for around $200 (no personal confirmation, however). It has the added benefit of being computer controlled with an optional interface.

Bearcat BC3000XLT Handheld Scanner 25-550, 760-1300 Mhz (less Cellular)
400 channels. Triple up Conv. with Excellent rejection of unwanted
signals. Scans at 100 channels per second, 300 in Search Turbo Mode.
Comes with Rechargable Battery pack, AC wall adapter/
Charger/ Belt Clip/ Flex-Ducky antenna, Earphone, Manual orig.
Box/Packing.
$249.00 delivered to your door UPS (Conus). Excellent Condition.
I have 2 and just don't use the second. For pure Scanning of your
favorite 400 frequencies, many feel this is the best handheld scanner on
the market today. I use it and like it more than my AOR8000.
Thanks for reading this message.

This makes me wonder how you're getting access to NNTP without ANY internet access?? You're dialing into a server of some sort, and it allows you access to remote NNTP hosts, and you'r telling us that you don't have any SMTP access? Sure sounds strange to me, a computer that accesses internet newsgroups without any access to the internet. You need to write that up, Iknow some people with an interest in network security that would find it to be interesting reading.

>That is why I always use various anonymous news servers to access this

UNFAVORABLE to you......but he is just protecting the public from your horrible books.

I would not try some of the mods either.....for example: the pro-43 I would personally send it of to a company (like Grove) and let them do the mod. Hell there are 3 boards that you have to take apart. I have done one Pro-43 but I will never do it again. Let the company mod it and if they screw up they have to fix it or buy a new one. Thats the hardest mod I have ever done and when you pay that much for a scanner you don't want to screw it up by dropping a glob of solder on the board ect.
Now the pro-2006 is another story....next to the pro-51 (keypad mod) it is the easiest damn thing to do. Back to the pro-43.....you need to be pretty good to do it!

The internet itself will cause your book sales to drop. Sort of goes back to the Hitler thing; Goes down by his own hand. Oh you will always have sales but I would bet that its going downhill.....soon you will have to set up at hamfest and sell them for $9.99

The internet has 99% of what your book has for FREE! NOTA PENNY! And "BOB P" has the rest (the few things you didnt steel from his work)

Hey CC if your looking over BC's shoulder..."How does it feel to live with a LOOSER?"

Notice I dont use full names 'GRIN......could be anyone

He must be a counseleror on flaming?!?

NEFF....what the hell kind of name is that.....sounds Russian...is he a commie bastard?

Shit I need to put something about scanners in here.......
Well ok...
Does anyone out there have a pro-43 that has the mod done for the 70mhz region?
If so what is the sensitivity like?
Our State police have links in the 70mhz region and I would like to have mine mod'ed it.
Every who had it befor me did the mod but not for the 70mhz region...I hope the diode is still there just cut.

Yes there is. Thanks for asking. The three individuals in question were No-CODE techs (had their licenses less than a year). I am not sure why the callsignes were not given, However, this was a press release from the MESA Arizona police Department. I can't personally pass around the callsigns, but, if you contact Lance Hale (602)993-0430, he might be able to tell you. He is the local Official Observer for the ARRL here in Phoenix.

Hope this helps.

I've had mine for a couple months now and it goes where I go.
76-200 MHz
300-540 MHz
590-999MHz (cell blocked of course but just play with IF)
Mil-spec 810 (rugged sucker, feels like a hand grenade)
Digital Code Squelch
CTCSS encode (decode and 20 second digital recorder with FTT-12 keypad)
AM
NFM
WFM (pretty sappy but ok for voice stations)
Dual Watch (will check a sub-band freq for you and lock there if busy)
Needless to say I love this radio. All of the above can be had from your
local Yaesu dealer for under $400.00.
Lots of accessories availble including adams 1c software/hardware
package. Have read reports on its wfm that it is very good for weather
sats. Check it out....ed

Although I just returned from Europe and was excited to get on the Internet to find out what other fellow scanner enthusiasts were up to around our great nation (and the world), I was saddened to find that 50% of the posts to this newsgroup had nothing to do with scanners but more to do with childish nonsense. I found I was waisting alot of time wading through the posts to find some technical tidbits or hot new frequencies. I wish you all the best and I hope return to this group in the future when certain individuals have turned their hatred elsewhere.

Best Wishes,

Steve S.

> Every apparatus at San Diego International Airport is red.

Joe:

I can't say I know much about San Diego. Nice folks. I must admit however that I find some stuff down there a bit perplexing. Oh well....

On the matter of why the Crash Fire Rescue Units at LAX are yellow (or now Lime Green).... It is most -definitely- an FAA regulation. Specifically: The FAA contributed funds towards the apparatus and one of the conditions was that ...

In 1979 (when we took delivery of the mighty Foam 1 and Foam 2), that they be YELLOW.

In 1990 they stipulated a LIME GREEN for our Foam 3.

While I cannot speculate as to why or why not the regulations might apply to San Diego (International?) Airport, I can say with absolute authority that as to the agency (LAFD), airport (LAX) and apparatus in question (Engine 51, Crash 80, Foam 180, Foam 280 and Foam 380), the color was an most definitely an FAA mandate.

I hope this answer your questions.

Which repeater would you like to hear about? and in which state???

> It has been a long time since you told us what FCC tickets you hold.

Haven't needed to as we dropped the credential discussion about 2 weeks ago. I guess you're
a day late & a dollar short again. Make that 2 weeks late & a dollar short.

> Gee thrill us again. You alwyas seem to forget to tell the group thet you
> are a dimestore bed pan changer because you weren't smart enough
> to go to college and get a real medical license.

Sorry, I changed from the counseling career back to the communications field
quite some time ago. I know the type of counseling you received was regarding
your used bed pan fettish but that was NOT my area of work, I referred your
type to specialists because of the severe nature of your problems.
BTW - being state certified I never needed a medical license. Never desired one
since I only wanted to do counseling, you have such severe problems that you

probably needed both a counselor & a physician. Really, you need a good
referral
please write to me at my fidonet address & I could refer you to a really
good counselor
but remember you have to want to change.

> Tell us about your days in Iowa. You know where a few of us kicked your ass because

For the US, Code of Federal Regulations, Title 47, Part 95, Personal Radio Services. This covers CB, Radio Control, and GMRS. The regulations for R/C (Subpart C) and CB (Subpart D) are in the form of Questions and Answers, and a copy should be included with any equipment, for those services, that you buy. CB Rules 12 and 13 cover allowed and prohibited transmissions. If you use the US House of Rep. Web site, use "CB Rule 12", etc., as the search string.

Are you sure? I have seen a yellow (i.e., lime yellow) crash truck
there, and I also have a photo of the fire station that shows a yellow
crash truck and an SD (presumably American Med Services) medic unit in front.

While we are on the subject of airport CFR trucks, Phoenix's units are
yellow. Not lime yellow, just plain old yellow. I have heard a rumor
that the trucks will be re-painted lime yellow to comply with FAA
regulations.

08/19/96

THREE ARRESTS IN MESA INTERFERENCE CASE

Friday evening August 16th and Saturday morning August 17th Mesa police, with the help of Arizona Repeater Association's Interference Committee, FCC agents and several Mesa hams, executed search warrants and arrested 3 individuals who were suspected of causing interference by transmitting on police, fire, and several other agencies channels. More arrests are pending.

This interference has consisted of transmitting false officer emergency calls "999", hot tones, using profanity and describing sex acts on the police channels. This has interfered with police and fire traffic and caused delays in the ability to dispatch emergency traffic. These individuals are also believed responsible for malicious interference, bomb threats, and 911 abuse on numerous local amateur repeaters, which is what lead the Interference Committee to their locations.

All three subjects were identified and arrested for interfering with public safety frequencies, impersonating a police officer, and false reporting. Their electronic equipment, including radios, computers, and telephones has been seized and numerous felony and misdemeanor charges are pending. They may also be facing sanctions from the FCC.

Suspect: Joshua D Cavender
Addr: 3443 E. University #133. Mesa
DOB: 12/21/79 Race: W Sex: M Hgt: 5'9"
Wgt: 185 Eye: Bro Hair: Bro

Suspect: Brad E. Shelley
Addr: 542 S. 37th St. Mesa
DOB: 12/25/79 Race: W Sex: M Hgt: 5'9"
Wgt: 140 Eye: Bro Hair: Bro

Suspect: Christopher R. Johnson

>will be fine)??

A successor of the original company that made the MS-2 is still alive
and well as of only a few years ago. I think they still support their
old scanners in terms of docs and service manuals.

Tennessee Electronics was their full name. A search through the Web
or Area Code directories of Tennessee might be productive. If worse
comes to worse, contact Roy at:

n7qyk@getnet.com

He keeps records of old scanners and may have more light to shed on
your search.

Rgds,

Bill

2231. NY/NJ Scanner Master 6 Arrives!

Well, there it was in today's mail...the long awaited 6th. Ed. Scanner Master.
After a real quick lookover, it seems very comprehensive as was the prior ed.
Noticed the thinner newsprint type pages however, which was a surprise consid-
ering the price increase. Hope all the new info will be worth it. I was dis-
appointed to see that they did not have the new crime codes for the Newark,NJ
PD listed. (I live only two towns away and Newark provides for some interesting
listening) They only had a one sentence remark that the codes *may* have recently changed.
I called SM in early spring of this year to inform them that Newark
PD had new codes,and had them for quite a while already. Oh well...
I'll need some time to "get into" this new book and maybe post more thoughts
in the near future. Gotta go now..."Patriot" is in town and there is lots of
Secret Service stuff in the clear for a change. Nothing earth shaking, bit at
least it's clear.
Phil

My qualifications;

I lie

I operate a repeater

I lie

I have FCC licenses

I lie

I have an enormous ego

I lie

I point fingers at others when they act like me

I lie

I make many posts complaining about others waste of bandwidth

I lie

I will kiss your ass if you agree with my sick agenda

I lie

I contribute nothing to scanning

I lie

I am a nut keeper

I lie

I resent women telling me what to do

I lie

I have to work for women and it pisses me off

I lie

I brag and try to make myself look big but nobody listens

I lie alot.

That seems to cover all the bases except I will lie at any chance
to take the heat off my actions. I am a coward and a liar. So
what, I got problems.

I've seen the new scanner, if it's the one you're referring to. It looks REAL cool, but functionally I don't see any difference between the "760" copy other than a slicker looking package. I heard that the older radio does NOT have the CTCSS option that the 760 does. Don't know much about the new one, just yet.

Hey Danny,
There is no such thing as being in "DEEP" trouble with the FCC over some piddley CB and a linear. Even if he were to sell the things and modify the radios to put out 500 watts it's no big deal. Now, if it was 30 years ago when the FCC was GOD of the airwaves that may have been a different story. I got a $50 citation from the FCC for having an antenna 2.5 feet above the max height at the time (20ft above the structure it was mounted on). Since they stopped requiring licenses, they could care less unless you're blasting TVI all over the place.

Go back to work and see if you can find anything worthwhile. Nobody gives a rats ass about something you dig up anyway.

Roger

Michael:

I hope you enjoyed the display of LAFD's helicopters at the Van Nuys
Airshow. (FYI: We have a total of seven helicopters).

The yellow fire apparatus you saw at Fire Station 90 is "Crash 90" and is
-technically- not an Engine. Crash 90 is restricted to the Airport and
environs.

The only true LA City Fire Engine painted yellow is Engine 51 at LAX.

For a compreghensive overview of the reasons why, read the "One Adam 12"
response I offered in this newsgroup.

Stay Safe!

John,

Check out John McColman's "Scanning Central Virginia" page. The URL is:

http://www.infi.net/~jmccolma/cvascan.html

He has tons of freqs for Central Virgina, including Williamsburg and the amusement parks!

As far as mobile scanners go in VA, I'm not completely sure. I ran accross a chart of what states allow mobile radio equipment (and radar detectors) at:

http://www.panix.com/clay/scanning/Frequencies/handy-info/scan-law.txt

According to this chart, VA *DOES* allow mobile scanners and ham equipment in vehicles, but they do not allow radar detectors. As a VA resident, I know that if you are caught using a radar detector, they will confiscate it. I don't know about radar detector detectors, but I have seen VA troopers flip their radar on and off when moving in light traffic to see who responds.... 8-) Gotta love the creativity! 8-)

Have a great trip!

Bill Hadley -- freq@netjammer.com

Bzzzzzzzt. Wrong. Next please. (I don't forge.)

By the way, do you REALLY change bed pans at a looney tunes asylum?
Someone says you dropped out of med school to be a bedpan changer.
Is it fun?

>language well. Get the hell out of our country!

People...my message extends beyond your mind-stem's reach.
You and yours seem to be a "kin-affirmation" of same dull
and insipid life-bent you both inhibit over....people who
do as you do, complain because you cannot discern messages
written to elucidate better the germination of the idea I
started out with, cannot for the best part of your life,
get out from beneath the cracks in your mind...

It is surely your dilemna that your reach is so short that
anything out in the real "I see it" world skips you by...
your world is your illusion of efficacy. Upon this is your
road travelled to nowhere.

It strikes my "funny-bone" that you did not get IT as I laid
bare the innuendos so written above, which was a reference
back to what you two had been alleging about the Cheeks' Guy.

Others have said it and so be their wordings to suffice. Both
of you have no understanding of the "low" ebb you speak from.
Your continual outbursts against the Cheeks guy shows the rest
of us how "reality" just skips you by.

It was suggested by me that seeing as how you cannot understand
what is written to you or about you by the Cheeks guy or by me

or others, it best for all concerned that you do the moral thing.

Put the Cheeks guy and me and those who don't apprecaite your point of No-Knowing'ness into your KILL FILE. This procedure is beneficial to all who enjoy scanning and the people who are able to share. Seeing as how the Cheeks Guy and me and a few others don't "appreciate your world" at all...put is in your KILL File and we all will be the better for it.

To Group: if these low-level revellers in sheet continue to post as they do...why not turn the page and complain about them to the ISP in their neck of the sputum spigot.

bill conduit
....and here is the Cheeks guy...take it away the cheeks guy....

The AR-16 looks to be a modified version of the WS-1000, with an
additional 100-memory bank and auto-store during search.

It isn't supposed to be out until 1Q97 so don't look too hard for
literature on vaporware :-)

Source record: 225730

The output stage of the radio is designed to transmit your signal for a given load. Altering the antenna length will change the load as seen by the radio. Outside certain designed limitations, some of the transmitted energy can and will be reflected back into the radio. As you might guess, this circuitry is not designed to "accept" this reflected energy...too much and you'll fry your transmitter. That's why most transceiver manuals warn you to NEVER transmit without an antenna.

Los Angeles City Fire Department Station 90 is located on Woodley Ave.
near the Van Nuys Airport it also has a yellow fire engine. They used
it at the air show while the four LAFD helicopters were in action.

Now, it appears that you're changing the subject Danny, from the above statement it sounds like YOU WERE in fact forging all those posts.

Also, in a recent post just prior to this one you were flaming a guy on his choice of words and his use of the english language. I think you should look at your own paragraph above and see what might be wrong. We're all human man and are prone to mistakes, however I saw none in that persons post... yours above has several.

You also accused him of not being American, That, my friend is Un-American. What are your roots?

Time to move on to another subject...
like maybe, scanners. (Wow!, what a concept!)

While the title of this thread says "Hams
busted...", I see no indication in the article that any of
the suspects were licensed amateur radio operators. What I
do notice is that the authorities made the busts with the
ASSISTANCE of local amateur radio operators. Is there some
clarification available?

>But he will sure jump your ass if you say you listened to cell calls!

Nooo, snotball, that isn't exactly the case.

The case is that way back in the beginning, YOU sniveled and whined
to my ISP over alleged rule-breaking.

A quick perusal of the article queue disclosed a post from you
'fessing up to actual criminal activities of not only listening to
cellular, but plotting and mapping your telco's cellular system.

I thought it kind of confusing for the pot to be calling the kettle
black......like where you got off throwing any stones.

> I would bet a bunch of money that his mega channel 2004 he boast about
>picks up cell calls great.

If you LOOK in the 1986 Radio Schloque Catalog for the PRO-2004, you
will SEE where it says continuous coverage from 25-520 MHz and
760-1300 MHz. So what? I don't set around and brag about criminal
activity like you did, and then turn around and bitch to an ISP
because someone says something I don't agree with.

>What flips me out is he sells books that tell step by step how to modify
>scanners

Yep. Sure do.

> but yet he disagrees with listening to cell calls.......

Who said I disagree? I just pointed out your double standards.

And your confession.

:-)) :-)) :-))

Are you dense? This is a newsgroup, dummy. Virtuality! What is there to complain about? Life is good. Geezus, man, every time I see you post, it makes me feel good. After all, I coulda been in your shoes except for divine intervention.

Or, if you'd been my son, I could be in jail for having drowned your sorry self at birth. I am surprised your Pop didn't drown or gas your ass. Amazing how the afterbirth stayed alive and grew you onto it.

Pity, though, how your eyelids never grew. Downright shame.

And then to make matters worse, you go posting confessions and apologies while you're drunk and then 'fess up to being a gay blade when you're sober. No wonder you're the Men's Room Attendant at the Portland, OR, Greyhound Bus Station.

Sad.....so sad. I heard you and Dannie Browning were going shopping for furniture together.

Yeah, I heard about LACoFD Station 60 becoming 51 from my friend Eric, KA6IHT who's the manager at Burbank HRO and until recently was the editor of PUBLIC SAFETY - CALIFORNIA section of the RCMA Scanner Journal.

Are you SURE that LA City has a 51? I'll have to check my City map and list. I think that one of the stations in the LAX area is 95, and I'm not sure of the others.

I used to get a chuckle when monitoring Ventura Co FD each time they dispatched THEIR Station 51!

First they came for the hackers. But I never did anything illegal with my computer, so I didn't speak up.
Then they came for the pornographers. But I thought there was too much smut on the Internet anyway, so I didn't speak up.
Then they came for the anonymous remailers. But a lot of nasty stuff gets sent from anon.penet.fi, so I didn't speak up.
Then they came for the encryption users. But I could never figure out how to work PGP anyway, so I didn't speak up.
Then they came for me. And by that time there was no one left to speak up.
It can happen folks

2276. A prize for John Mackey's email?

Newsgroup: rec.radio.scanner
Date: 1996-08-22 00:00:00 UTC
From: feral@clark.net
Message-ID: <4vh8p4$hr7@clarknet.clark.net>
Source record: 225752

I'm sorry I must not have been keeping up with this stuff lately.
But anyway, is someone offering a prize for John Mackeys email address?

Gads, could it be that hard with all the clues he has left behind?

Step 1: Assume he does not have an internet account like he says
Step 2: Find out his current telephone number
Step 3: Find all BBS's in the 503 area code
Step 4: Narrow list down to the 6 BBS's that have fido, usenet, etc.
Step 5: Dial'em up

Elapsed time: about half an hour

Obviously, if Bill Cheek knew anything about the internet and how to use it, this whole flame war would have been over with long ago. Since he can't do anything to REALLY defend himself, he seems content to just run his mouth and make an ass of himself.

And, to John Mackey, though I disagree with your tactics, I do agree with your intent. Keep up the good work at PARG.

Oh, btw, have the PARG members change their passwords for the webpage.

2277. Atlanta Olympic Bomb 911/Dispatch Transcript

Newsgroup: rec.radio.scanner
Date: 1996-08-22 00:00:00 UTC
From: Ben Hines <bhines@sdcc13.ucsd.edu>
Message-ID: <4vh94q$n2q@sdcc12.ucsd.edu>
Source record: 225753

I thought y'all might be interested in this. It's pretty chilling. Was anyone monitoring any of this?..

-Ben

The Atlanta 911 transcript

source:

http://www.cnn.com/US/9608/09/olympics.bomb.911/911.transcript.wir/transcript.html

(as also posted in the RISKS digest, comp.risks)

Excerpts from a transcript released Thursday by the Atlanta Police Department regarding the bomb threat telephoned to 911 on July 27. Times have been converted from military time to standard notation, and punctuation
and spelling have been edited. Parenthetical notes are part of the police transcript except where labeled as an editor's note.

The transcript refers to these police terms: Code 73, bomb threat; and Zone 5, a police precinct near Centennial Olympic Park.

The transcript did not explain the Zone 5 dispatcher's references to Code 17 and Code 8, which apparently were unrelated to the bomb call.

12:58:28 a.m.: [Call to 911]

12:58:32 a.m.: Atlanta Police Department 911 Operator: "Atlanta 911."
Caller: "There is a bomb in Centennial Park, you have 30 minutes."
12:58:45 a.m.: Caller hangs up.

1:01:20 a.m.: 911 operator calls APD Agency Command Center (all lines busy).
....

1:01:30 a.m.: 911 operator calls Zone 5 and notifies Zone 5 of Signal 73 and
requests address of Centennial Park -- unable to get street address.

Dispatcher: "Zone 5."
911 Operator: "You know the address to Centennial Olympic Park?"
Dispatcher: "Girl, don't ask me to lie to you."
911 Operator: "I tried to call ACC but ain't nobody answering the phone ...
but I just got this man called talking about there's a

bomb set to go off in 30 minutes in Centennial Park."
Dispatcher: "Oh Lord, child. One minute, one minute. I copy Code 17.
OK,
all DUI units are Code 8 and will not be able to
assist on the freeway.
Oh Lord, child. Uh, OK, wait a minute, Centennial
Park, you put it in and it won't go in?"
911 Operator: "No, unless I'm spelling Centennial wrong. How are we
spelling
Centennial?"
Dispatcher: "C-E-N-T-E-N-N-I -- how do you spell Centennial?"
911 Operator: "I'm spelling it right, it ain't taking."
Dispatcher: "Yeah."
911 Operator: "Centennial Park is not going. Maybe if I take 'park' out,
maybe that will take. Let me try that."
Dispatcher: "Wait a minute, that's the regular Olympic Stadium right?"
911 Operator: "Olympic Stadium is like Zone 3, though. Centennial Park."
Dispatcher: "That's the Centennial Park?"
911 Operator: "It's near the Coca Cola Plaza, I think."
Dispatcher: "In 5?"
911 Operator: "Uh huh."
Dispatcher: "Uh, hold on. Sonya, you don't know the address to the
Centennial Park?"
2nd Dispatcher (in background): "Downtown."
911 Operator: "Male, about 30."
Dispatcher: "1546, Code 17, 23."
911 Operator: "White."
Dispatcher: "Uh, you know what? Ask one of the supervisors."
911 Operator: "No, Lord help me, you know they don't know."
Dispatcher: "I know, but it gets it off you."
911 Operator: "Alrighty then, bye."
Dispatcher: "Bye."

1:02:40 a.m.: 911 operator calls APD ACC for address (telephone line
problem;
operators cannot hear each other.) ...

1:02:50 a.m.: 911 operator calls APD ACC again and requests address for
Centennial Park and is given the telephone number.

ACC: "Atlanta Police, Agency Command Center."
911 Operator: "Hey, can you hear me now?"
ACC: "Uh huh."
911 Operator: "OK, can you give me the address of the Centennial Park?"
ACC: "I ain't got no address to Centennial Park, what y'all
think I am?"
911 Operator: "Can you help me find the address to Centennial Park?"
ACC: "I can give you the telephone number of Centennial Park."
911 Operator: "I need to get this bomb threat over there to y'all."
ACC: "Well."
911 Operator: "But I need the address of Centennial Park. It's not

taking,
the system is not taking Centennial Park, that's not
where it came from, but you know the system is not
taking Centennial Park, that's where he said the bomb was."
ACC: "No particular street or what?"
911 Operator: "He just said there's a bomb set to go off in 30 minutes
in
Centennial Park."
ACC: "Ooh, it's going to be gone off by the time we find the
address."
911 Operator: "Are you kiddin'? Give me that, give me that."
ACC: "I mean I don't have an address, I just have phone
numbers."
911 Operator: "Give me the phone number."
...

1:05:10 a.m.: 911 operator calls Centennial Park for street address and
is placed on hold. Receives address at 1:07:10 a.m.

Centennial Park: "Centennial Park, this is Operator Morgan."
911 Operator: "Hi, can you give me the address to Centennial Park?"
Cen Park: "The address?"
911 Operator: "Uh huh."
Cen Park: "Uh, hold on a second."

1:06:30 a.m.: 911 operator notifies Communications Supervisor, Sgt.
Montgomery.

911 Operator: "Does anybody -- Sgt. Montgomery, do you know the address
of
Centennial Park? Do you know the address to Centennial Park.
Well, I need to get the address of Centennial Park 'cause, I
mean I don't mean to upset nobody, but we got a bomb threat
over there."

(Editor's note: The transcript does not further indicate whether this
comment about a bomb threat was directed only to Sgt. Montgomery in the
911 center or to Centennial Park's Operator Morgan, who is shown to come
back on the line just after the comment.)

Cen Park: "Ma'am."
911 Operator: "Yes."
Cen Park: "OK, it's 145 International Boulevard."
911 Operator: "145 International Boulevard."
Cen Park: "Uh huh."
911 Operator: "OK."
Cen Park: "All right, uh huh."
911 Operator: "Thank you. Bye bye."

1:08:35 a.m.: 911 operator sent call to dispatch.

1:11:10 a.m.:
Dispatcher: "1591. Radio raising 1594."

Unit 1594: "1594. You call?"

1:11:20 a.m.:
Dispatcher: "1594, that's affirmative, got a Signal 73 at 145
International Boulevard. It came from the pay phone at
the Days Inn. The caller is advising that he has one set
to go off in 30 minutes at Centennial Park. Sounded like
a white male."

(Editor's note: The same information is then given to Unit 1593 and the
dispatcher calls Unit1546.)

1:12:30 a.m.:
Dispatcher: "Did you copy?"

1:12:40 a.m.:
Unit 1546: "1546. I copy. Advise the state police, they police that
park.
I'll go the Days Inn and see if I can locate the caller."
Dispatcher: "OK, that's affirmative."

(Editor's note: There are sporadic entries over the next seven minutes.
Another officer, designated Unit 1593, also instructs the dispatcher at
1:18:50 a.m. to "contact the state police supervisor." The transcript
contains no indication, however, that state police were notified.)

1:20:00 a.m.:
Unit 2924: "2924 to Radio, be advised that something just blew up at
Olympic Park."

Source record: 225754

I have tried a Scout / AR8000 combination and it will lock onto AM signals especially aircraft. If you have the auto bandplan operating on the AR8000 it will automatically change mode depending on the frequency the Scout indicates. You can also get the bandscope to operate on the AR8000 whilst the Scout is tuning it - great if you wish to check that you are spot on frequency.

Regards

Martin

Message-ID: <4vhdge$dm7$2@mhafc.production.compuserve.com>
Source record: 225755

The Scout will work fine in high signal areas - as long as the signal you are trying to capture is grater than 10-15dB above the ambient signal level.

At a range of 10m or so from the target this should not be too much of a problem. The more unwanted siganls you can filter out the more likely you are to be able to capture the wanted ones.

There has to be a trade off between range and the number of signals you wish to capture. In a typical urban area there may be hundreds of signals being generated. Asking the Scout to sort through these and just present the wanted signals is asking rather a lot of a broadband device.

You can either detect local signals quickly - With a Scout or more distant signals slowly - with a scanner. The ideal combination is to use both of them together.

Regards

Martin.

Keith
It cannot damage your "scanner" as your scanner is NOT a transmitter. Several
of RS antennas are dual purpose and you can transmit with them when they are
tuned (extended) to the proper length. Don't worry about your scanner. Enjoy
the RF.

Can anyone in the group point me to a schematic or kit for an RF-sensing switch to mute the speaker or turn off the power to my scanner when I transmit on my Ham rig?

I seem to recall reading an article about building one in an electronics mag or a scanner mag, but I can't recall where and couldn't get to my boxes of old hobby magazines if I could.

I would prefer to build rather than buy, but if there is a commercial product out there, I would be interested in information about it as well.

Thanks...John

Roger,

I have a dualband TRANSCEIVER. I'm not a liscenced ham, and would
never transmit. I just wanted to know *HOW* transmitting with an antenna
of improper length could DAMAGE the radio. I could understand how an
antenna at an improper length could be an inefficient transmitter but how
could it damage it?

Thanks
Keith

Bob,
I'll just bet it's easier to make it work in the 137-157 MHz FM
band than the 118-136.450 MHz AM band. Just a guess....(you really
didn't want 108-118 MHz, did you?)

Yea he will never recover from the TKO. Seems that he has sufferd brain dammage....maybe that explains why he acts like a 16 year old teenager.

I guess his next book will be about how scanning use to be....since there are only a few radios that can be modified now......and he is no longer needed......demand goes down and the useless dries up nad goes away.

So you see, we can just stand back and watch his business drop untill it is gone and then he will be gone. 'SNIFF
Well I sure that his supporters will help him pay the bills.....right.

I intended no disrespect; I was being facetious. If your agency had "inherited" a non-red piece, it would certainly seem a waste of taxpayer dollars to repaint it if there was no requirement to do so.

>Our Commander of Operations was very specific when he told me that the
>recently "dominoed" Seagrave triple at FS51 (we rotate apparatus
>regularly) was -mandated- to be painted yellow, as it (and not the

>complement at LAX.

Mandated by whom? As I stated, with so many red CFR vehicles in service around the country, it cannot be an FAA regulation that covers yours. Is it the City or County of LA, or perhaps the State of California, that mandates this color scheme? Or is it merely a department regulation?

>I hope to do an overview of our LAX operations at the LAFD homepage in

> all the time! Hmmmm.

It sounds like a good dispatching tool, and I'm sure it would be. However,
if the units stopped reporting their location on the radio, a safety risk
would be introduced. In standard practice, and officer on a traffic stop
will say something to the effect of "10-17 California 2LAG999 a red chevy
pickup 88 and 395". This way, if somethign happens to the officer,
everyone immediately knows what to look for and where to look. As far as
the location, the dispatcher could quickly read the location back to
backup units if the officer screamed "I need more units now!", but
sometimes even those few seconds can make a difference. If the available
units in the area know a stop is going on and where it is, they can start
going that way until the unit reports "code 4" (basically "under control")
and respond more quickly if something does happen.

GPS is a great idea, but it can't replace everything...

ISA bus????

What sort of shielding does it(the card) have? I've always had trouble
hearing computer noise if I set a scanner too close to the
computer. I can only imagine the problems with it being right
in the box.

Any other pointers for more info?

This antenna has been VERY popular among those of us with the
super wide band scanners/shortwave radios, like the Yupiteru MVT-7100,
the AOR AR-8000, etc.

I have a couple of them and think that they are excellent for all round
use. I mainly use them with my Yupiteru, but have used it with my
Pro-43 also.
As the the 5/8 and 1/2 wave rigid antennas that hams sometimes use on
their HTs, you have to be a little careful about the stress that a long
rigid antenna can put on the BNC connector. Be aware that it doesn't have
much (if any) "flex", so be aware of the stresses on the BNC connector and
try to minimize them as much as possible.

Otherwise, it's great.

I have heard this JAWs callsign a lot lately. But I haven't heard MAPLE, the
VT ANG F-16's. Maybe they switched callsigns?

I have also heard COBRAs (NY ANG F-16's) doing a lot of intercept work lately.
That's also new.

Since the Niagara Falls outfit is no longer flying fast jets is the MISTY MOA
over the lake much in use?

>chip on your shoulders about USSN because they've trashed everything
>you've ever printed! Now aint that about right?

If that were true, it's doubtful that USSN would have asked me to
write for them a couple of years ago when they restarted operations
after a prior abysmal failure. (You misspelled 'Gibralter', BTW.)

Anyway, USSN in its first incarnation did some very stupid, low-class
reviews of my first two books. They didn't trash them, but in the
words of the writer, "Cheek's books are not for the hobbyist. I'm a
technician, and I wouldn't dare try some of those mods....."

Cute. Especially cute when I get a letter from Texas, "Doc, I have an
8th grade education, but I was able to do ALL your mods, step by step,
and never had a bit of trouble." That's one of the areas of my
expertise, Boe. I *can* transfer high technology to the layman's
hands and fingers. It is now history that I can do that.

But, yes, the present incarnation of USSN allowed an ANONYMOUS writer
do an unfavorable review of my 3rd book, THE ULTIMATE SCANNER.

That aggravated me, all right, but you gotta understand that it was
ANDY MOSS who wrote it, and you will recall good ol' Moss had a strong
bias against me from way back. It's not cool for any publication to
lend itself to personal issues, but they let Andy Moss do his
sniveling and pot shooting from behind the cloak of anonymity. BUT
THAT AIN'T IT, Boe. That's NOT anything that can't be lived with.
Stick around and lemme tell you what IS IT......grab a sandwich.

The truth is that USSN's business side isn't all that stable or well managed, and I didn't want to get into any finanicial dealings with them and owe or be owed money. So I declined to write for them. That was 2-3 years ago.

Meanwhile, other writers did sign on. Good ol' boys, too. Fine fellers. Guys from the scanner community. Guys from next door! They helped get USSN back out there in circulation. They worked their butts off and did a darned decent job of it.

Trouble is, starting about 8 months ago, USSN ran into some more business trouble....and skipped paying their writers for that month. And the next month. And the one after that. And all the months since then. So this month, I think it was, the USSN writers got together and went on strike.

USSN whined that they'd get paid "around the first of the year". The writers reasoned that when you haven't been paid in months, as it is, and it will be more months of song and dance before the cash is coughed up, well, it was time to strike.

USSN tried to tell people the writers QUIT. That's rubbish of course.

USSN owes its writers up to 8-mos back pay. And says they can't get paid until "around the first of the year". Now don't you agree that's fairly low-life? Well now GET THIS:

The Radio Communications Monitoring Association (RCMA) floundered and went belly-up, hind-end over tea kettle last month. And USSN galloped in, johnny-on-the-spot, to arrange a "humanitarian" take-over deal where they continue all RCMA Journal subscriptions with the USSN, in return for the MAIL LIST of RCMA members! On top of that, USSN is luring the RCMA writers who are accustomed to writing for free, to continue their free services, while the REAL writers languish and whistle "Dixie" for their money. Familiar strikebusting scenario?

OK, Boe, here it is. USSN owes its writers thousands of dollars. That means USSN is strapped and on hard times. So what the hell is USSN doing acting as a charity, taking on MORE costs and overhead, while their writers CONTINUE TO GO UNPAID? Charity is supposed to begin in the "home", right? No?

So here is the realistic outlook. The writers are screwed, period. The USSN subscribers are screwed, not only for degraded and reduced quality content of the magazine from now on, but USSN won't make good on its commitments to them, either, in the long run. And lastly, now the RCMA members get screwed, because where they once had a legit claim against the RCMA business staff, if they allow their claims to be shifted over to USSN, then the RCMA business people get to ride off into the sunset, pretty as you please. And when USSN goes belly up for the last time, probably in mid-Winter or early Spring, everyone will have been shafted and hosed.

One issue is that USSN should pay its writers NOW before taking on any added overhead and costs. Another issue is that USSN is making its writers fund the take-over of the RCMA mail list. The writers are, in effect, forced to lend or donate their back pay to the new commitment of supporting the now defunct RCMA.

We're dealing with three classes of innocent people, Boe, USSN writers, USSN subscribers, and RCMA members, all of whom are being set up to take a royal screwing. There's MORE down in the core of this matter, too, but I think now you get the idea. No?

If not, then consider how Robert Smith and Bob Gehri, both of the USSN, are one and the same person. We'll get into that some other time. You just dissect and assimilate what I told you above for now.

Actually, in a Psychology course I took in 1977, "Perception", we learned about that study of colors and I recall that it was LIME GREEN, rather than Yellow, that was the most visible color day or night and in all conditions.

RED, believe it or not, came near the bottom in terms of visibility. Hmmm.

Brian Humphrey? Care to comment?

It's a world-caliber receiver (500 kHz to 1.3 GHz) on a PC/AT size
card that plugs into a 16-bit expansion slot on a 386/up computer.
Comes with DOS and Windows software. Cool stuff from what I see so
far.

I'm from Indiana Gus... and the state statute here concerning mobile scanners exempts bona fide news gathering employees, ham radio operators, and members of police and fire departments. That's our law... I can send you a copy of it if you'd like to see it. I've heard that other states have similar exemptions.

Where are you from that its "against the law to listen"? Does that include from your home, or just mobile/portable?

>
>Opinions, anyone?

I'd gladly pay the extra money for the PRO-2042 over the PRO-2035
due to the greatly improved firmware.

Truth be told, I favor the BC9000XLT over both, unless you must
control the scanner via a computer. Though the PRO-2042 is no
slouch by any description, the BC9000XLT has a more manageable
bank size, can be fitted with an optional CTCSS decoder,
and scans & searches much faster. Too, it's easier to effect
full 800 MHz coverage with the BC9000XLT.

From the "Buying a Used Scanner" FAQ:

[...]

PRO-2035: 1995 vintage wide coverage base made by GRE.
1,000 channels, but cumbersome 100 channel bank size.
Tuning knob. Broader IF selectivity than PRO-2006. Poor
dynamic range. 10 linkable search banks. Dumb Auto Store
feature stores the same frequencies over and over. Wastes
time scanning empty channels. See "The Radio Shack PRO-2035
- How Does It Compare With the PRO-2006?," by Bob Parnass,
AJ9S, in Monitoring Times, January 1995.

[...]

PRO-2042: 1996 version of the wide coverage PRO-2035 base
with improved firmware and amber display. Made by GRE.
1,000 channels, but cumbersome 100 channel bank size.
Tuning knob. NFM selectivity is still a problem but
improved over PRO-2035. 10 linkable search banks. Smart
Auto Store feature stores the unique frequencies. Can lock
out up to 200 frequencies from search. Query facility
indicates if and in what channel a frequency is programmed.
Scan skips over empty channels automatically. Can sort
memories by frequency within a given bank. IFs are 609 -
612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than
PRO-2006. Overall, a top grade scanner and second only to

Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042,"
by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

>>like a good price. My local cops just went 800 trunking. I am just
>>looking for a bedside scanner to keep track.
>> Which model of Bearcat is the Pro 2026? them?

Although the PRO-2026 resembles the Bearcat BC-760, it is not a
Bearcat. It won't accept an optional CTCSS board either (the 760
will).
The 2026 is not a bad "bedside" scanner for casual listening but the
760 is better.

I would look for a used 2026 and use the clearance price of the new
ones as a bargaining tool as only the older models were capable of
receiving that missing block of 800-900 odd MHz.
The clearance models are likely of the newer generation that are not
'modifiable'.
Of course if the 'missing frequency range' is of no interest to you
then the clearance 2026 sounds like a reasonable deal.

>non-red crash trucks. There is only one remaining non-red
>truck at my local airport, and I think it's in reserve.

Er, uh, uhm... pardon if you will - my intrusion.

Gentlemen, I appreciate your interest in our agency.

Though I will have to look up the applicable code section(s), I can assure you that LAFD's Engine 51 is -not- painted yellow as a result of any lethargy or whimsy on our Department's behalf.

The LAFD maintains 3 Fire Stations on the property at LAX. Stations 80, 51 & 95. The equipment at FS80 (which sits between the main runways) is *purely* for Crash Fire Rescue. Big stuff. REALLY Big Stuff. I mean REALLY REALLY Big Stuff.

Our Commander of Operations was very specific when he told me that the recently "dominoed" Seagrave triple at FS51 (we rotate apparatus regularly) was -mandated- to be painted yellow, as it (and not the apparatus at nearby FS95) is considered to be part of the calculated CFR complement at LAX.

We were also told to paint our new CFR rigs in the same (yucch!) lime green as our newest CFR Rapid Intervention Vehicle ("Crash 80").

I hope this answers your questions.

I hope to do an overview of our LAX operations at the LAFD homepage in the near future.

In response to a posting by kkoller@adnetsol.com (Ken Koller) :

>>Los Angeles City Fire Department Station 51 is located at Los Angeles
>>International Airport and has the only non-red pumper in the LAFD
>>inventory, it's yellow becuase of FAA regulatiuons.

dstark@frontiernet.net (D Stark) wrote:

> It's probably yellow because of bureaucratic
>inertia, or the cost of repainting an in-service piece of
>apparatus before it's retired. The FAA does not require
>non-red crash trucks. There is only one remaining non-red
>truck at my local airport, and I think it's in reserve.

Er, uh, uhm... pardon if you will - my intrusion.

Gentlemen, I appreciate your interest in our agency.

Though I will have to look up the applicable code section(s), I can assure you that LAFD's Engine 51 is -not- painted yellow as a result of any lethargy or whimsy on our Department's behalf.

The LAFD maintains 3 Fire Stations on the property at LAX. Stations 80, 51 & 95. The equipment at FS80 (which sits between the main runways) is *purely* for Crash Fire Rescue. Big stuff. REALLY Big Stuff. I mean REALLY REALLY Big Stuff.

Our Commander of Operations was very specific when he told me that the recently "dominoed" Seagrave triple at FS51 (we rotate apparatus regularly) was -mandated- to be painted yellow, as it (and not the apparatus at nearby FS95) is considered to be part of the calculated CFR complement at LAX.

We were also told to paint our new CFR rigs in the same (yucch!) lime green as our newest CFR Rapid Intervention Vehicle ("Crash 80").

I hope this answers your questions.

I hope to do an overview of our LAX operations at the LAFD homepage in the near future.

http://www.ci.la.ca.us/dept/LAFD

Stay Safe!

Brian Humphrey
Public Information Officer
Los Angeles City Fire Department

I'm going to buy a scanner, and want one with no blocked freq's. Is the best way to do this ordering overseas (I live in the US)? If so, from which company?
The radio I want to get is the AR2700.....I would like to know what owners of them think about them.

Thankyou very much!

Radio Shack is closing out their DSP units for $30. I remember when they first came out, they were something like $100.

Anyway, I bought one, and they work pretty well, especially for the price. They're great on shortwave, but are equally useful for removing any high-pitched whines you might encpunter in VHF or UHF.

Your observations on right on the money. It is beginning to be a waste of time even checking this newsgroup because of the "childish nonsense". One would hope that the nonsense would just die a natural death, however, it seems to be getting worse.

Dick D.

: DS> it's retired. The FAA does not require non-red crash trucks.

: Every apparatus at San Diego International Airport is red.
: Always has been, since the fire station was built.

If the piece of apparatus is purchases wholely or in part with federal grant money, which all of LAFD's crash equipment *and* engine 51 are, then they are required to be painted the color the federal government determines. It used to be bright yellow, but now it's slime green. The new engine 51 which will be delivered later this year will be slime green.

Hi, i'm a newbie. Strongly considering purchasing the Uniden BearTracker BCT-7 mainly for auto use to monitor California Highway Patrol vehicles and also for police, traffic, weather scanning.

Is the BCT-7 programmable to scan the cellular frequencies? If so, please point me to a direction that would show me how to do it. Thanks in advance.

Be careful Bill, I didn't say that I do not have internet access. I did
say
that I do not have an internet account and I do not have internet
e-mail. Those
are seperate issues than internet access. THAT is why I use various
different
servers. BTW-you mention me dialing into a server, that is also wrong
for
my situation.

> No ISP, BUT access to several different NNTP hosts!?

Yes, that is what I have said.

Radio Shack sells a case specifically made
for the PRO-51, but you have to special order
it and they will mail it to you. I bought one
and it fits perfectly.

This would be because the maximum amount of time that a freq hopping
phone can stay on any channel 400msec. The channels can be up to 500khz
wide, so on a narrow band receiver you still may never hear it.

> > VA>Yes, Tropez sells a freq hopping 900MHz Phone. They have straight digital

I have not followed all of the products but I would bet that Tropez is
not mis-advertising anything. If they are selling a freq hopper, I am
willing to bet it IS a freq hopper. If they also sell a regular digital
phone (FSK, PSK, etc), they probably don't call it a freq hopper.

We have three spread specrtum devices in our house. An Escort DSSS
phone, an AT&T FHSS phone, and a Ricochet FHSS modem. I have seen them
all on a spectrum analyser and they all meet the definition of spread
spectrum. And freq hopping looks diiferent that direct sequence - and

they both look much diiferent than narrow band digital.

If you want an opinion on the technolgies. Stay away from direct sequence spread spectrum. No one is making a DSSS phone that is spread "wide enough" to avoid interference. Escort (Cincinatti Microwave) will tell you that DS has more "jamming immunity" that frequency hoppers - I can tell you from experience and research that this is NOT true. Direct sequence provides a better quality signal - but only when it doesn't have nearby sources of strong interference (like the two freq hoppers we have in the house).

> I'm not sure the $99 one is SS(FH) but Tropez does sell one for under
> $175, yes it's a true freq hopper and not PCM or anything else.

Most of the digital phones use a form PCM to do the D/A - A/D conversion. Even the the spread spectrum phones. PCM is not the modulation technique used by the radio.

> Also, we

Ricochet modems are $599 if you don't subscribe to the service along with it for a one year commitment. They will rent you a modem with no commitment for $10/month. I rented mine... I don't want to be stuck with an obsolete piece of "proprietary" hardware in a year or two when something better comes along. And trust me, something will - it may come from Metricom (the Ricochet folks) or from someone else. Metricom is already getting ready to market a newer, smaller wireless modem for their network - I think it will be called "Cricket". It's about the size of battery in your Ricochet modem.

Well...not "copyrighted", but they are protected. You are not supposed to disclose information you overhear on your scanner in services such as the Private Land Mobile Radio Service. PLM is where your public service and business stations operate (generally). Using anything you intercept for personal gain is illegal as well. So in a sense - they are protected as if they are copyrighted.

I was wondering when the subject of a moderator was going to come up...

I don't think a moderated group would be a waste at all. Before this flame
war this group averaged 70 posts a day and a readership of about 20,000.
Although, don't put too much faith in those figures.

Also, some people simply don't want to be on a mailing list.

Some other random points I would like to make:

- Many people don't have access to Unix utilities such as procmail, various
filters, even the killfile switches common to Pine, Tin, etc.

- Killfiles are not terribly effective, or rather configurable, and the latest
lisp-based filters have a learning curve beyond what most people would bother with

- Many moderated groups simply don't generate much traffic, however I think enough
damage has been done here (and also alt.radio.scanner) to make that unlikely

In general I think it would be good if people had the choice to wade through the
un-moderated, un-censored muck - or, to easily read scanner related topics.

Actually, Mr. Johnson is a tech plus.

Going by the names and DOBs of the people listed in press release I
would guess that callsigns of the stations were: Cavender KC7JGH,
Shelley KC7JQY, and Johnson KC7QPJ.

If these are incorrect, I am sure someone will let me know.

If this is the same as the BC100/200, you can just hit <E>nter again,
and it will take the frequency.

RSC@sruvm.sru.edu (RON) wrote:

Hello there. I agree with your assesment of renewals. They suck! At first they work great, then after a few charges the weaken or don't charge. I have seven AAs that are better used as paper wieghts.

Hey Ken, do you know where a civilian could purchase Ventura County Fire Department maps? It would be cool to have those maps to see the areas that each station covers and also to be able to refer to when they dispatch a call. I'm also planing to check with my local police dept. to see if they have a beat map available. I kinda have an idea of where each beat is, but it would be cool to have the exact bounderies. If all else fail, I guess I could alway tag along with a local boy scout's tour of the station and take a picture of the map :)

If you haven't check out the LAFD web page, it's very well done and has a picture of their new dispatch center (Real modern facility, looks like NORAD).

The present state of things is that you CANNOT copyright lists of ANYTHING.The only thing you can copyright is the format used to present the lists. You can't just photocopy a scanner frequency book and put your name on it and sell it, but you CAN use the information in it to make your own book.That's why scanner frequency CD ROM's and phone # CD ROMS have a program on the disk to extract the data.If the disk was just one big list without a copyrighted extraction program,you would have every right to make an exact duplicate,put your name on it and sell it as yours.

No Scott, since YOU are the problem, until YOU go away, the problem will
not go away. Scott feels that it is his perogative to tell people what
they can and cannot say in this newsgroup. If you don't agree to be
censored by him, he'll complain to your ISP and send you one e-mail
message after another touting his distasteful views. I finally contacted
his company, Minerva Systems and asked that he be told to stop contacting
me via the company's Internet access. I was told that he would no longer
use the company's system but that is evidently not the case.

Works is great, especially if you got it bundled with your PC, as is often the case these days.
If you're looking to buy a database, however, I would suggest taking a look at FileMaker Pro 3.0 for Macs and PCs. It's easy to use and it has plenty of horsepower (relational, scripting--even basic word processing). I've even seen a few shareware templates around designed for scanning frequencies...

Hi Bill,

The Winradio has been available over here for a couple of months. I haven't yet been able to find the balance on all settings that will allow it to "scan" at an acceptable level - a little more tinkering perhaps.

That aside I was very sursprised at the HF performance. When I fisrt fitted it I put in a Volmet frequency I was most pleased to hear a nice clear crisp tx when I was expecting more of a voice behind computer hash.

I've found VHF/UHF performance to be good when tuned to single frequencies but as I say havn't quite managaed to get the balance of squelch delay & signal threshold settings etc to scan OK, It might be the PC I'm using it on so I should perhaps try another one and also check if the software has been updated at all.

> Who and where was the information? Is it available on-line?

The WS-1000 is marketed by Diamond Antennas is manufactured by Standard and
the same as the AX400 which is sold by them domestically in Japan. As rumour
has it the AOR AR16 is very much the the same radio with one or two "upgrades",
maybe 500 channels and also Scout compatability although exact details have
been a little thin on the ground (here anyway).

It would also seem that it may appear in the USA/Japan sometime in the near
future (how near ??). It is not clear though if it will enter into the
European theatre of operation (CE approval bla bla bla, although the WS-1000
does have CE approval). I would hope it does though.

The AOR Japan web site (www.aorja.com) doen't have any advance info. As soon
as we have anything, if anything we'll put something together.

Thats pretty much it ASFAIK.

> I've asked around dont have ANY information on them. Last week I
> took my 7000 to Icom for a tune up and the tech there hadn't even
> heard of it yet.

Yup. Came in a week or so ago. Now on Backorder again for a week or so.

> Any new news out there??

Appearance is obviously Icom with a very nice large clear Display. Front panel has subtle rounded edges and slight curve on the front all of which just take that sharpness away from the look - very nice IMO. All buttons on the front are well laid out and clear and the rotary dial is well placed and weighted for rotary tuning.

Eash "group" of keys has its own area on the front panel which as I say are very well laid out. Top right has the numerical keypad. Underneath them the Scan and Search facilities together with memory channel selections and variable scan speed and delay time.

Mode slection is easy via well position keys (one for each mode). For those modes with variable bandwiths each press of the mode key takes you through to each bandwith. Pressing AM gives 5.5KHz, once more 12KHz and once more 2.2KHz. Keep pressing and it just scrolls though.

Initial impressions on performance are excellent. If you are familiar with the way the Icoms (7000, 7100 etc) Scan and Search you won't have nay problems with the 8500, if your not it can just take a short time to adjust to the Icom way of "wording".

The '8500 has 1000 memory channels. 800 of these are what might be best described as conventional channels (ie you put frequencies into them). By default these 800 channels are split into 20 banks of 40 channels however you can adjust these banks to suit your own preferences (not something I have played with yet).

100 channels are available for Auto Store purposes amd 100 channels available to store frequencies you wish to skip over when searching or scanning.

The 8500 also has 10 search banks (or 20 scan edge frequencies as Icom call it).

Each bank can have a 5 character name and each channel an 8 character description.

Frequency coverage is continous from 100Khz - 2Ghz. 824-849Mhz & 869-894Mhz is delected from the US version and on the FRrench edition you loose 87.50-108MHz.

Standard Icom CI-V output is available as is a RS232 for Computer control. The manual includes brfied section on the RS232 command codes for thos wanting to do home brew software.

Monday is a "Bank Hliday" here in the UK so we have a long weekend ahead. Hopefully I will have the chance to play a little more with the one we have but so far, I guess its OK :-)

> the unit number.
>
> I've listened to LAPD since 1973 and I HAVE heard calls to "1 Adam 11",
> but never to "12".Hello,

I'm currently a LAPD officer and I worked Central Area six years ago when I was on probation. 1A12 is a valid LAPD unit desination but currently not used. The first number indicates the Division of assignment : ie "1" - Central , " 2" - Rampart, "3"-Southwest ,"4"-Hollenbeck ,etc... The letter indicates the assignment, ie "A"- Basic Radio Car , "T" - Traffic Investigation Unit,"M"-motorcycle, etc.

The last two numbers is the is the area of assignment...As of six years ago when I worked there Central Area deployed (5) basic cars - 1A11 , 1A41, 1A65, 1A97,and 1A71 for each of the three shifts..Day Watch, PM Watch , and Morning Watch. Notice all the units on these watches are odd numbered. Rarely, but sometimes, an "A" car is deployed on the two cover shifts - Mid Days and Mid Pms . These two watches are usually deployed with Footbeat units, "FB" units, ie: 1FB46.

1A12 would not have been a regularly deployed "A" car because of the even number designation but not to say it isn't entirely impossible because some areas do deploy a basic car to supplement their Footbeat units on the midwatches.

Just to help clarify things....

A friend of mine in another part of the electronics biz got a chance to
analyze several UHF cordless phones. He says their spectrum signature
is ordinary digital, quite unlike a _true_ frequency hopper spectrum
signature which we both recognize. I'll take his word for it; he was
speaking to me directly, not over the highly flammable networks. :) It
is not unusual to misadvertise a digitally encoded/pulse modulated
carrier as a "frequency hopper" because the sidebands take up
considerable spectrum space compared to voice-bandwidth FM. As the
pulse modulation changes, the sidebands also change, leading to the
erroneous labelling of "hopping frequencies." For 99 bucks a cordless
phone operates like a military frequency hopper? I think not.

CB>Subject: Re: Where can I buy anti-RF spray to spray inside my scanner shell?

CB> It'll be right next to the Snake Oil and Magic Engine Restorer at your
CB>local store.

The myth of "anti-RF spray" has a tiny bit of validity. The most common form of shielding treatment for plastic cases is vacuum sputtering of aluminum ("evaporative plating" is the misnomer jargon phrase) on the inside. Aluminum paint, aluminum powder in a paint binder, has some _slight_ effect, maybe a few db at best on radiated RF at UHF, less at VHF, and probably none at HF. On some plastic case materials, the paint solvent will react with the plastic...not a good thing.* "Aquadag" spray, carbon powder in a binder sometimes used in TV repair, has a slight effect on metal case surfaces, breaking up different case resonances somewhat...not enough to be any sort of shield at HF, very little effect on VHF and above. Severe resonance effects in metal cases or radiation out of plastic cases can be reduced by specific plastic-foam-binder absorber material such as Emerson & Cuming "Eccosorb" (tm), but that is usually at high UHF on up into microwaves.

* I would not advise spraying anything containing a solvent on plastic without first trying it out on a chip of the same case material. There are many different kinds of plastics and each reacts to solvents differently.

I'm not sure the $99 one is SS(FH) but Tropez does sell one for under
$175, yes it's a true freq hopper and not PCM or anything else. Also, we
have a wireless modem network all over town and it's using a SS(FH)
signal as well. All over town you can get around a 50Kbps connection.
The modem is $200.
Go to:
http://www.ricochet.net
and it'll give you the run down on the type of signal used.

Hi,

I have a major problem with my BC200-XLT scanner. The other day, I was using it when the battery died. I have a second identical battery that I thought might be charged. I put it on, but the scanner would still not power on.

Next, using this method with both batteries, I tried to power the unit by plugging it in. Still, no power. It will not turn on.

Has anyone seen this problem before or does anyone know what I should do? I have had this scanner for only 4 years, it should still be working and I really can't afford a new one.

Please, anyone and everyone that has any advice please help!

Also, please emial your responses so I can get them faster.

Attn: Bob Grove, I have seen you post here before, and I feel you might have a solution to my problem. Hope to here from you!

Thanks in advance,

2408. $5 become $50,000 more

Newsgroup: rec.radio.scanner
Date: 1996-08-23 00:00:00 UTC
From: John Andreson <Andr@dr.com.au>
Message-ID: <321DD87C.52DF@dr.com.au>
Source record: 225664

Want to get more than $50,000 from $5, do following:

1) Write your name and address on 5 sheets of paper. If you don't want to be indicted, use an alias but don't forget to write your address. Below that, write the words, "I will get $50,000." Fold $1 coin in each piece of paper and mail them to the following 5 addresses:

1. Amy Jones, L.P.O BOX A97, ANU, ACT 2601, Australia.
2. Denny Jordon, L.P.O BOX A97, ANU, ACT 2601, Australia.
3. Amanda Hill, L.P.O BOX A97, ANU, ACT 2601, Australia.
4. Jane Harderway, L.P.O BOX A97, ANU, ACT 2601, Australia
5. Michael smclalm, L.P.O BOX A97, ANU, ACT 2601, Australia

2) Now remove the top name from the list, and move the other four names up. In other words, #5 becomes #4 and so on. Put your name as the fifth one on the list. You can do this by simply retyping the article or reposting it to other newsgroups with the edited addresses.

3) Post the article to at least 200 newsgroups. There are 17,000, so it shouldn't be hard to find that many.

Then, you may get more than $50,000!!!

2409. Unblocking the Opto Xplorer

Newsgroup: rec.radio.scanner
Date: 1996-08-23 00:00:00 UTC
From: Ph0n-E@sublime.com
Message-ID: <Ph0n-E-2308960039490001@news.sirius.com>
Source record: 225665

How to unblock the Opto Xplorer by Ph0n-E

When shipped the Opto Xplorer has the cellular band blocked out, you can tune the vfo to cell freqs, but it will not sweep that range.

All of the ads I've seen say 30-2ghz - nothing about CELL blocked. The only place in the manual it mentions this is under the optional accessories it states their CF802 cell filter only works with unblocked xplorers.

I like opto products, but I think its lame of them not to be upfront about this - so here is how you fix it:

Connect your X up to a computer with the supplied cable. Run a terminal progam making sure the baud rate matches. Type the following:

FE FE B0 E0 7F D6 78 19 52 27 96 34 45 88 01 FD

You will always get an error response.

Power your X on and off and you should now see "*Xplorer*" and its unblocked. (normally it just says "Xplorer")

Its kinda a cool unit, audio is nice and loud. It has some weird quirks like locking on to something but you get no freq readout and no audio. The FM notch filter is a must have accessory - you can manually lock out freqs with the X, but this slows down sweeps significantly. They should have built in the filter, who wants to hear radio stations? They should have also added a sound squelch option to avoid open carriers and data signals. The PL decoding is quick and perfect, the DPL decoding which should be quicker than PL is actually slower.
Its neat, but needs some work, specially for that amount of $$$.

Have phun.

Just press Enter again after the "warning" has come up. It will then store
it in the channel you wish. You can do this as many times as you want but it
will always tell you that it is stored in xxx channel first (always the
first one).

Source record: 225669

IMHO the FT-50 makes an acceptable scanner for VHF and UHF. It lacks coverage of the HF bands where there is still a lot of activity in my area. The radio is more prone to interference than many scanners, but I use it often as a scanner so that I only have to carry 1 radio. I have copied below a review that I posted to one of the ham newsgroups earlier this year. My biggest concern in recommending this radio in this newsgroup is that it frankly scares me what would happen if certain posters got their hands on a transmitting device.

**********Begin repost**********
I took my radio to the Indy 500 race this weekend and used it to access the Indianapolis repeater as well as using it as a scanner to listen to the pit crew/driver communications, race control, and broadcasters. Some of the things that I really liked about using the radio as a scanner are adequate scan speed, great audio, alphanumics to identify the channels, the ability to program the radio with the computer and save the information in a file, and the small size compared to a conventional scanner.
However, in an EMI hostile environment like a race track, I experienced a lot of interference from IMD's , bleedthrough etc. Most of the signals at the track are very strong (I was able to pick up a perfect signal from the track safety crews when I was 2 miles away from the track). My Bearcat 200XLT did not experience interference as badly as my FT-50 and my brother-in-laws Realistic scanner did not experience any interference (not sure of the model number, may have been a triple conversion scanner). A friend suggested that the next time that I take the radio to a race to take along a collection of SMA inline attenuators to put between the antenna and the receiver. I believe that this will solve the problem.

By the way, this would have been a perfect situation to utilize the advertised Wide FM receive that is advertised. I try to take along as little stuff as possible to the race and it is sometimes helpful to listen to the FM broadcast to keep track of the race. The other bug that I have found with the radio is that the receive icon in the LCD display does not come on when a signal is received. The instruction manual states that one can turn off the LED to save the battery and the icon will perform the same function, but it does not. I realize that this is a small complaint.

Overall, I am very pleased with the radio.

They have a web page. In fact not to long ago the company was doing
some heavy spaming about their product. The only spec they left off of
the page, and I can not get a answer from them, is selectivity. The
failure, or avoiding, to answer this question of mine may mean that
yes the radio will be subject to computer noise on some bands.

This radio also came with a BIG price tag. $800.00 american dollars
was way too much to pay for this thing. The only place you could get
them is from the company in Austraila. The information that I got
from them is about 4 months old. You all know the saying, prices and
specs subject to change without notice.

Good Luck

For Sale - AOR 2700 Hand-Held Scanner, 12 months old. ï¿½175.00

FEATURES:

500 channels (10 banks of 50 channels)
10 search banks
covers 500KHz-1300MHz AM-WFM-NFM (Input accepted from 100kHz)
Scans/searches aprox. 30 channels/sec
sensitivity is 10MHz to 400MHz (NFM 0.5uV)-(WFM 6.0uV)-(AM 0.8uV)
400MHz to 1.0 GHz (NFM 0.7uV)-(WFM 6.0uV) 1.0 to 1.3 GHz (NFM 1.5uV)
based on NFM = 12dB SINAD, AM = 10 dB S/N, WFM = 30 dB S/N

Contact Martin

I wouldn't say that. Read the ham magazines & every month they list
some
CB'er who got busted for hi-power operating. Besides, it really depends
on the
year. Nowadays, all they do is slap your hands. I don't know how long
you've
been in radio buy 15&25 years ago there were some pretty serious fines &
actions taken for such offenses.

If Bill ever actually had the commercial FCC license like he claims he
likely
would have lost it over such an offense. That would explain why he
didn't know
that the commercial licenses changed names about 10 years ago.

> put out 500 watts it's no big deal. Now, if it was 30 years ago when the FCC
> was GOD of the airwaves that may have been a different story. I got a $50

That is the point I am making, we don't know when this happened.

I'm just trying to make a piont here. BC bashed me for stateing that
listen to cell calls and I just want everybody to know that at least I
havent been in trouble with the FCC (yet).
He made the statement "calling the kettle black" when he is the one with
the criminal record. Other than speeding tickets I have nothing on my
record.
I know this is a bunch of childish bullshit but bill WILL NOT except my
e-mail.
And if you have noticed hes been pretty quiet since I mentioned the FCC

problem 'grin

The Family Radio Frequency is in the UHF band (462 Mhz) which is also know as the General Mobile Radio Service. Since some of the rules and licensing requirements have been relaxed, stores like Radio Shack are selling these radios that operate on itinerant frequencies.

I am cross-posting this message on rec.radio.scanner and I am sure someoone on that group could give you a more detailed answer than I have.

I will tell you that, without the aid of a repeater to amplify your signal, don't expect much range from two simplex handheld units!

Why do all these flaming posts have to waste everyones time. If you guys move the flames through email instead of wasting valuable bandwidth, then we would all be happier. Or is it that you'd like us all to read this crap to see just how cutesy you can be in your one-up-manship replies. No need to reply to this post. Sorry, I had to lay this on the group, but there are just too many involved in this s... to send to each one via email. Barry

Can someone tell me which pins from the COM port goes to Pin 7 & Pin 4 on the OP-Amp? Which pins on the COM port goes to C2 and to C3? The readme file that came with the program, only says to use the unused signals from the COM port to get the +/- 12v for the OP-AMP. I don't understand which unused signal would have -12v and which would have +12v? I'm probably making this harder than what it really is, but I'd appreciate any help.

Thanks,

Sam

I have purchased a pro 2005 with the following mods

s-meter upgrade
PS-90 UPGRADE
8.4 mhz speed upgrade
squelch upgrade
cellular upgrade

can anyone clue me in on the key research PS-90 mod ? what is it ,
ect.
Also what type and size meter should I use on s- meter jack ?
there is a extra BNC connector on rear of this unit , what could it be ?

Any and all help will be greatly appreciated

THANKS
BUTCH FLINT

It looks like none of the other responders have mentioned that the
ruling does NOT apply to owners of townhomes/condiminiums where the
roof and surrounding real estate is not the sole property of the
owner, but is shared by the group.

If this is the case where you live, the ruling will not help you.

bgluck@monmouth.com wrote:

>Why do all these flaming posts have to waste everyones time.

They don't. It's *real* easy to just pass 'em up if you're not interested in 'em. Assuming you're in full control of your computer, anyway. Maybe some guys aren't, though.

> If you guys move the flames through email instead of wasting valuable
>bandwidth, then we would all be happier.

I'm happy. Doesn't make me any never-mind what folks do. I'm in full control of my computational facilities.

> Or is it that you'd like us all to read this crap to see just
> how cutesy you can be in your one-up-manship replies.

I don't think they care one way or the other when they get guys like you to pipe in and tell 'em where their mothers went wrong.

> No need to reply to this post.

No need to have posted it in the first place, but if it was worth posting, then it was worth a reply.

> Sorry, I had to
>lay this on the group, but there are just too many involved in this
>s... to send to each one via email. Barry

Huh? Doesn't your e-mailer have CC: and BCC: capabilities? That's easy, too, when you're in full control of your computational facilities. Try it sometime. A new birth of pure, unadulterated freedom might give you a warm fuzzy feeling instead of that cranky, cantankerous, ornery, out-of-sorts syndrome that you let these guys whup upon your head and shoulders.

IMHO.....of course.

Last night (August 24), a unit was dispatched from the Police Departmentt in El Paso Texas to our downtown plaza, in reference to an assault in progress.

According to dispatch, there were "8 subjects, approximately 18-20 years old, beating subjects at random. Weapons are involved: subjects are beating the victims with plastic alligators."

Nothing else was said on the subject, and the unit acted like it was the most normal things in the world. =)

I apoligies for asking a non scanner question.

I am working on an idea to
track players in a game wearing low power fm transmitters.

there would be a maximum of 25 transmitters?? min of 10
all player would be tracked on a computer via a reciever converter interface.

is such a device avalible?

is there going to be to much interference?

yes I've heard of GPS (but thats way too expensive)

thanks in advance

Mark L9 (markl9@aol.com) wrote:
: Actually, in a Psychology course I took in 1977, "Perception", we learned
: about that study of colors and I recall that it was LIME GREEN, rather
: than Yellow, that was the most visible color day or night and in all
: conditions.

: RED, believe it or not, came near the bottom in terms of visibility.
: Hmmm.

: Brian Humphrey? Care to comment?

I'll jump ahead of Brian seeing as Ventura County FD is returning to red after 25 years yellow, much to the disaproval of firefighters and the public. I remember the study, I read something on it years ago, and yes, slime green was the highest visible color, but damn is it ugly. In the years since the study, emergency warning lights have come a long way from the bubble-gum rotator you see on top of engine 51 in Emergency!. Also, a new NFPA regulation requires a reflective stripe the entire way around fire engines (I think things like squads and Chief units are exempt) which also increases visibilty. If you look at any of LAFD's new Seagrave engines or the LACoFD's new KMEs, you'll see that the white stripe really enhances the visibilty both in the daylight and at night, even with the dark paint.

And oddly enough the Oxnard, CA Fire Department, who was one of the first departments to go slime green, is now going back to red as well.

And as for VCFD going back to red, I myself am very opposed to it. There is so much tradition in the yellow engines, whereever VCFD units go throughout the state, they are immediately recognized as the Ventura County FD.

Please reply before this group is poisoned by the
"danny" / "eric" threads!

Has anyone cracked open a 1991 vintage R1 to replace
the main/backup batteries? I have no problems to this
date but believe in "preventative maintenance".

Seen from my point of view the FT50 is only nearly acceptable.
The adds here in Denmark said something like: RX from 76 MHz.
I thought: Fine let me get hold on this gem. I have had the FT50 for
about two months now, and I must say im not impressed any more.
In Denmark several fire departments uses freqs around 80 MHz. The
local FD has its tower just 400 meters from my home. When I gets about
one kilometer away from the tower the FT50 receives absolutely nothing
arond 80 MHz.
Studying the manual reveals the fact that the FT50 has reduced
sencitivity on low band. I must say thats the understatement of the
year.

The FT50 also lacks banks so you can lock out unwanted freqs.
The scanning speed is also slow compared to a real scanner.

So if the FT50 is your first scanner I will not recomment it.
And if you are from Denmark and your local FD is on 4 meter:
Dont buy it.

I bought mine not to look as a walking telecom tower with my cellular,
my IC32 and my 220XLT attached to me :-)
I`we reduced it to two now, but miss the local FD.

>his company, Minerva Systems and asked that he be told to stop contacting
>me via the company's Internet access. I was told that he would no longer
>use the company's system but that is evidently not the case.

This is one ironic situation, to be sure. If we hold Freedom of
Speech in high regard, and acknowledge and accept the anarchy of the
Internet, then Mr. Gustafson is wholly within his rights to say and do
most anything he wants, including snivel to our ISP's behind our
backs, and to load up our e-mail boxes with messages tearfully begging
us to post only those things he wants to see.

Like this morning, fer instance. I peek into my mailbox on the server
and what do I see? Forty-Four (44) messages from Mr. Gustafson of
Minerva Systems, Inc. Good grief! The downright stupid thing is that
he KNOWS I will delete his crap at the server, either automatically or
upon remote review.

To occasionally send someone a single message asking whatever you want
to ask...is one thing, so long as you are prepared to be told no, hell
no, or go fly a kite. But to act like a broken record, sending the
same crap over and over again?

THAT is downright dumb. For one, it pisses off the other guy. If
there ever was a chance of him cooperating, the sender's stupidity
will see to it that he won't.

Let me submit here that Freedom of Speech and acceptance of the anarchy of the Internet are not at issue here. Those are two commodities that stand by themselves.

Mr. Gustafson, however, takes the equivalent of playing his speech through a 100-watt megaphone right outside a property, and then leverages some pseudo-force of law and convention to make himself look like all he's doing is practicing his rights and that his "targets" are the bad guys.

OBSERVATION #1: Mr. Gustafson never posts anything in this forum.
OBSERVATION #2: Mr. Gustafson fancies himself as a netcop and great savior to the newsgroups.
OBSERVATION #3: Mr. Gustafson is a one-way, underhanded, back-stabber and you do things his way or not at all.
OBEERVATION #4: Mr. Gustafson takes a newsgroup issue and turns it into a personal issue.
OBEERVATION #5: Mr. Gustafson uses his company's resources, Minerva Systems, Inc. from which to wage his little war.

QUESTION #1: I wonder how many other people in this forum have received Mr. Gustafson's harrassing little e-mail bombardments? Sure, you can ignore them, but he won't stop.

QUESTION #2: I wonder how much of Mr. Gustafson's waste of company time and resources is reflected in the PRICES of Minerva Systems, Inc.'s products and services ???

QUESTION #3: I wonder when Mr. Gustafson will get the message to conduct himself as he sees fit, and leave others to conduct themselves as they see fit, thereby affording Freedom of Speech and appreciation of the anarchy of the Internet to ALL?

>the case these days.

Ahhh, it still comes bundled? Cool. I got WORKS 2.0 bundled on a
Dell 386 several years ago. Been buying or upgrading to it, ever
since. I think MS WORKS made the catalytic difference for me back in
the days when I was migrating from the Apple II platform to the PC. I
could easily have gone back to the Apples, but I got productive with
WORKS and never looked back.

> If you're looking to buy a database, however, I would suggest taking a
> look at FileMaker Pro 3.0 for Macs and PCs. It's easy to use and it has
> plenty of horsepower >(relational, scripting--even basic word processing).
> I've even seen a few shareware templates around designed for
> scanning frequencies...

That one is from Claris, right? It got good reviews in all the
magazines of recent times. And the price is not bad, if I recall
correctly....around $99 ? Its relational database capabilities would
be a strong plus for situations where WORKS would start to falter.

I think the most important thing for databases and frquency management
(other records, too) is the ability to not only handle fairly large
files of 10,000 to 50,000 records, but also the flexibility of
importing and exporting. There is no way under the sun everyone is
going to use the same software, but it is important that we be able to
swap files in a more or less standard format. dBase III or dBase IV
are fairly standard to most database managers, as are comma-delimited
ASCII files.

I would put my bottom line down on the import and export capabilities
of a database manager before the brand name and other aspects,
assuming it will handle a few thousand records in the first place.
And to the best of my knowledge, FileMaker Pro meets all
qualifications and more.

It sure is good to talk about scanner & technical stuff!!!

Rgds,

Bill

Mark:

Actually, no...but you since you threw the the gauntlet (directly at me)..

Yes, there were numerous studies and yes, there can be a great deal of
debate on the matter. I am familar with the (supposed) merits of the
different colors, but support (the LAFD) in maintaining its RED Fire
Apparatus because:

1) Changing the color would be too expensive. I mean hey, who would pay
to change all those children's books?

2) Can you REALLY trust a study done during the "Brady Bunch" years?

Little Dannyb blathers:

>Hi art.....first off why do you hide behind the fake e-mail address? Are
>you chicken shit?

No, I dont have an ISP so I have to use anon remailers. Sorry. If it good
enough for the great God John Mackey, it is certainly more than
good enough for me!

>Sencond, learn to kkep your messages form going of the
>page---------------->

Hey newbie, change your diaper, wipe behind your ears and get
a newsreader that formats text. While you are at it get one with
a spelling checker. With all the typos you must be have some sort of fit.
You certainly come off as an uneducated buffoon.

>Third and last eat shit! You BC butt kisser.

Havent, wouldnt and wont. BC or anybody. It isnt necessary. Most anything
I need I get quite easily by being the nice sort of person I am. Works great, but that all
is certainly lost on a bumpkin like you.

>I am starting to really love this shit...this must be how BC
>feels......damn I see why you have been such a ass now.

You certainly are acting like an ass. At least you admit it.

>Poor old BC wont even except my mail now....'SNIFF

Why should he? Who in their right mind would? What the
hell could you have to E-mail that would be of any value ?

>And I dont even do mail bombs.

With your recent show of intelligence on rec.scanner I have a feeling
you would blow yourself up if you tried.

>I dont believe in kill a file. I guess I dont have enough foes yet like
>BC does.

It certainly is easy to count all five or six in your camp, isnt it?
By the way, it is spelled dont.

>OH yea send BC wife some mail
>ccheek@cts.com
>he will have to put a kill file on hers to.

Now this is a class act. Your friend John Mackey has some undesirable characteristics but nothing like this. You are a classless fool Danny.

Gasp! Wheeze!

But say, you ought to try getting that money back. It was over two weeks ago that RCMA formally shut it down and announced the party to be over. For them to take money after that time is fraudulent and criminal. But there is a good chance they will return it with a form explanation. I don't think RCMA is that sort of an operator.

>C'est l'vie....

No kidding.

Good luck on getting the bucks back.

Rgds,

>Isn't it kind of a waste since SCAN-L is pretty much the same beast?

Sure would seem so.

I don't know about anyone else, but I am in enough control of my computer that nothing gets in but what I choose and permit it in first. And the process of what gets read is even more merciless and decisive. I got me a pair of bad-assed streamlined, jet-propelled <D>elete and <N>ext keys, I'll tell ya what.

When I feel having a superiority complex, I read Mackey stuff. When I feel like feeling good, I read scanner stuff. When I feel like being thankful for who I am versus what I coulda been, I read some Danny Boy stuff. Choices.....choices......choices!

<Shrug>

I don't see why people can't control their virtual emotions, even if they can't control their real ones.

So this is a scanner forum? If someone hollered out, "Pizza & Beer down at Shakey's at 9:00pm for all scanner enthusiasts", there would he a crowd to show up and some of the talk would be about scanners; some would be about football; some about the Olympics; and some would be about who couldn't stand who. The idea here ain't for JUST scanner talk. It's for scanner people to mix with other scanner people. It ain't for any one person to judge the merits of what someone else is talking about.

Same for any sort of specialized gathering. In this case, no one has to listen to anyone they don't want to hear. No one has to do anything he/she doesn't want to do.

So what the heck's all the ruckus about, anyway?

There's already a taste of the bad vibes that can happen when a moderator lays down the law.....to wit, John Mackey and Hugh Duff. I kicked their sweet patooties from the FidoNet SCANRADIO forum clean to

Kingdom Come. And y'all know good and well WHY by now.

Those two popinjays are STILL howling and whining about it. There will only be more of that, no matter WHO is moderator. If a moderator is imposed and elected, then he/she *will* moderate. Period. On a newsgroup, THAT means censorship, nepotism, and a good ol' boy network. Sure, that setup will please the fleas off a few of the control freaks.

Will it please YOU?

Why not everyone just control their own computers, and therefore, their own domains, and let it go at that? There ain't nuthin' wrong with this forum except what people WANT to see wrong. Here in virtuality, there is ALWAYS a choice..... Freedom of choice is a very wonderful thing to have and a terrible thing to lose.

Food fer thought, boys 'n girls. Vote for a "moderator" and you won't have a choice. Ain't that right, Misters Mackey & Duff?

Regards to all,

Bill Cheek

>I've had mine for a couple months now and it goes where I go.
>76-200 MHz
>300-540 MHz
>590-999MHz (cell blocked of course but just play with IF)

Agreed. Great all-around coverage for an 2M/440 transmit HT.

>Mil-spec 810 (rugged sucker, feels like a hand grenade)

>WFM (pretty sappy but ok for voice stations)
The WFM is not great on this radio. Most scanners with this mode are much better. I'm not sure how good it is in the 800-999MHz range. My guess is that designed to be best in 144/440MHz areas for Amateur Radio use.

>Dual Watch (will check a sub-band freq for you and lock there if busy)
Many scanners come with more than 1 priority channel. The latest offerings from Uniden provide 10 priority channels and the check is a bit faster. Also, with the Yaesu, I think the DW channel must be channel 1 when in memory channel mode.

>Needless to say I love this radio. All of the above can be had from your
>local Yaesu dealer for under $400.00.
Several ham friends have the FT50 and love it. I've used it. I have the FT10 (lesser version 2M only) for my main ham rig. Alphanumerics are very nice as is the tuning knob on top (I wish Uniden would adopt this type of knob interface on their handhelds). Mil specs - it's a tough handheld like the FT10. They paid close to $300 for the rig with a coupon. Unfortunately, the FT10 was released first and I had no knowledge of the FT50 release... So I bought the cheaper FT10 (for a decent price anyway). Hindsight is always 20/20.

With that said....

Overall, IMHO, it's probably the best basic HT ham rig for the money but it's not necessarily a great scanner. The WFM is poor. No data skip or mass-unlock of locked out channels. Scanning is slow compared to the near 100 channels/sec on modern uniden scanners. Only 112 channels (yeah, that's a lot, but many feel strapped with less than 200 and many hams will fill up channels with repeaters, etc). The FT10 has banks which are hard to set-up and I *think* the FT50 doesn't do banking at all. It lacks search and store features found on radios of comparable price. Coverage starts at 76MHz or so and so older police/fire in the 33MHz area can't be scanned (which is still used in some communities here in Mass). No selectable delay.

If you are a ham who likes the VHF amateur bands and only want/need one radio and wish to have wide coverage for receive, this is a great rig to get. Those looking for a scanner only might be better spending somewhat close to the same money and get a 400 channel Uniden BC3000XLT or similar handheld with many of the bells and whistles to make scanning a real pleasure.

Just thoughts,

Dave Bernazzani

It sounds to me that you're probably working for or are the net admin of the
local college or some facility like that. This would give you net access that
could/would be as anonymous as you want it to be and it's easy to get access to
NNTP from that sort of position.

>> No ISP, BUT access to several different NNTP hosts!?
>
>Yes, that is what I have said.

That confirmes that your fairly deep into a network. If you have legal access
to that network then you'd also have an e-mail account; from this I have to
assume that you're accessing that network without proper authoity, or because
it's your "work" e-mail address you're very careful to keep it secret from those
of us whom you've bashed.

There's also been the idea that you're using a BBS's facilities to post here.
From what I've seen you wouldn't have as much control over the header infomation
going thru a BBS as you seem to have now.

A successor of the original company that made the MS-2 is still alive
and well as of only a few years ago. I think they still support their
old scanners in terms of docs and service manuals.

Tennessee Electronics was their full name. A search through the Web
or Area Code directories of Tennessee might be productive. If worse
comes to worse, contact Roy at:

n7qyk@getnet.com

He keeps records of old scanners and may have more light to shed on
your search....

I wrote about some spray stuff from Miller-Stephenson, but it turned out to be expensive junk. The spray nozzles clogged like crazy I hardly could ever get a job done before the darn nozzle clogged.

There might be some better stuff out now, but I don't know of any. I do know that a heavy-duty aluminum foil works pretty fine. Just spray-glue the interior surfaces of the plastic, and then press the foil into place and work it "in". Trim and clean up.

This process will work in a lot of situations in lieu of the spray shield compound. For the purist, copper foils are also available, and I think you can get brass, too.

Spoke with a rep from Miller Stephenson Chemical Co. today and found out the following:

All of the Milshield RFI Shielding Coating in aerosol cans (MS-485, MS-490, & MS-495) has been discontinued. She mentioned that they had problems with the aerosol cans. The only available, plastic compatible, coating (soon to be discontinued also) was MS-487 (Ni) and is available only by the quart ($46.45) and gallon ($136). The method of application is left up to the user. The problem is that they will ONLY ship to a company capable of receiving and handling hazardous materials. This is not an easy task here in California.

Their new RFI shielding coatings are NOT for plastic enclosure applications.

Your suggestion of spray adhesive and foil (aluminium, copper, or brass) seems like a good alternative.

Scott

If you have a PRO-26 (Model 20-506) purchased in the US then the only way to actually restore the complete coverage so you can key in all frequencies is replace the main CPU with the one that is fitted to the PRO-26 sold outside North America (Model 20-9506) that has full 25-1300MHz coverage.

The CPU can be replaced but you need to know what "your about" (ie removing and refitting a 100 pin surface mount IC) to do this or you can also swap the complete logic board with one already fitted with the "full coverage" CPU - a little easier.

If you don't wish to take the above route then you can add a small jumper on the RF board that will allow the US Cellular frequencies to be heard in the mid UHF Mhz area but you still cannot key in or display the actual cellular frequencies. There is a web site with the details of this latter mod but I don't have it to hand I'm afraid.

I havn't got the one we have fitted at the moment nor do I have the documentation to hand to see if anything is listed but from memory it isn't detailed. It hasn't been a problem when using it though and interference from the PC has been minimal. Less so than using a "stand alone" scanner next to a PC I would say.

I could do with checking to see if Rossetta have updated the software as this could help cure the problems we had at work in not being able to get the correct balance settings. Other than this the performance was "better" than I probably expected.

> This radio also came with a BIG price tag. $800.00 american dollars
> was way too much to pay for this thing. The only place you could get
> them is from the company in Austraila. The information that I got

They have been available here in the UK for a couple of months now but interest in them doesn't seem high. At UK prices they work out to be around $550-$600. STill a high price though for something thats a little awkard to carry around should the need arise :-(

All the best

I am selling the following gear that is from one of the locals
who passed away about two weeks ago. This list is the first and
there will probably one more list to follow next week.

Bearcat 220 Scanner, no AC
cable, not checked out $25

Regency (Sears) K100 Scanner $25
no AC cable, not checked out

Commodore C64 Computer system
C-64, #1541 Disc Drive, Ramsey
C-64 Packet Modem, NLQ-180 II
Printer, and Magnavox monitor $75

Realistic TRC-23 Navajo CB` $10
Receiver /xmit seem to work ok

Wawmsee JB-2002 2KW SWR/
Wattmeter $55

Tucker T-1000 ant tuner (new) $85

Swan Cygnet 1200W linear $325

Kenwood TS-530 transceiver
Digital readout, WARC bands,
and built in AC power supply $450
Just checked out by local
technician, good condition

EF Johnson KW Matchbox
Rough shape, for parts only $85

D-104 Mike, no stand, the
element is loose $15

We are going back to his home on Saturday to inventory and
move the remainder of his equipment. A list of those items
will follow as soon as it is complete

FileMaker Pro will indeed import and export in any format (well, any format that I can think of), including .dbf, which may be the most popular. What I did was dump the Spectrum CD-ROM into FM 3.0 so that I could actually slice and dice the data in a variety of ways that the CDROM does not permit. Then I find and sort whatever it is that I'm looking for and save it as a .dbf file. After that, I open my Probe scanner software and bring in the freqs. Instant groups, banks and programming.

The price for FM 3.0, however, is closer to $200 (without updgrades or vendor deals). That's probably not something most people will buy just to set up a scanner database but if you already have need of a database for other things such as mailing lists, customer contacts--whatever--then it's good choice.

I am looking for advice on my scanner(s). I recently
purchased a PRO-2006 with an OPTOSCAN-456 board installed.
When comparing it to my PRO-2030, specifically in the
cordless phone band, I am very disappointed. My comparison
was an A/B comparison with a roof mount scanner antenna and
with each units small whip antenna. In both cases the less
capable (or so I thought) PRO-2030 locked on more channels
and sounded better.
My locate Radio Shack service center looked at the PRO-2006
and said it met, or exceeded, the factory specifications. I
guess some of my questions are:
1) Should I try a different service center?
2) Is the 2006 not as good as I read?
3) Is the Opto board my problem?
4) Is my 2030 a phenomenal unit?

Spamming is in the eye of the beholder. In a special interest forum
such as this one, I should think it to be perfectly acceptable to post
product announcements and particulars. Perhaps not so good on the
REC.LADIES.KNITTING group......

>The only spec they left off of
>the page, and I can not get a answer from them, is selectivity. The
>failure, or avoiding, to answer this question of mine may mean that
>yes the radio will be subject to computer noise on some bands.

Well, that's not a problem as near as I have determined so far. I
seem to be able to hear what I want to hear, and my monitor site is
geared for some long distance hearing. Selectivity is a good
question, and I will try to get an answer, either from Rosetta
Laboratories, or by my own bench tests and measurements.

>This radio also came with a BIG price tag. $800.00 american dollars

snip

>>
>A terribly misdirected group. May be so may not be so. Do you have any
>facts to show that rf is harmless.

It is almost impossible to prove a negative. Please show me a definitive study with a properly established scientific basis that will show that RF is harmful. After all, it is your theory.

This is the same science that stated that bran was wonderful, only to state a few short months later that it was not. The same science that stated that ALAR would kill everyone in the free world, only to state later that the basis was flawed. This is the same science that said the cranberries would cause cancer in huge numbers of people, only to be shown to be false.

Chocolate is SIMILAR to marijuana? The center for science? and disease control is headed by a bunch of people who at best are self serving boobs, concerned only about perpetuating their high paying jobs.

I don't KNOW if RF is harmful or not but virtually everything in the human experience is harmful, or at least potentially harmful. Cars kill thousands every year but we raised the speed limit to 75 knowing that there will be an incremental increase in the highway death toll.

The prez has declared that tobacco (cigarettes) are a nicotine delivery system while VERY recently we de-drugged Nicorette gum. My mother has smoked for over 70 years and is in better shape than most 60 year olds I know. I do not condone smoking but I believe that the benefits to society COULD outweigh the negatives (agreed not likely but every bit as speculative as your hypothesis) BTW, could you name any ... ANY person who has been shown to have died from second hand smoke?? Why has the average lifespan increased in the last 200 years?

Point of speculation.... In 23 years scientists will determine that a pack of cigarettes a day will decrease your chances to contract PMS/Prostate trouble!

Every state (to my knowledge) has some sort of law regulating the sale of cigarettes to minors so enacting new laws is just plain stupid

until we try to enforce the current laws.

Get a clue folks, the government is rapidly taking ALL of yur
Constitutional Rights away. Read the Federalist Papers to understand
that the founding fathers were aware of this possibility and
considered it to be the biggest potential problem the country would
face.

You mean the Icom IC-R1 ?

No real problem. Unit just splits into two and the battery pack can be
swapped around easily. You should be able to obtain the battery pack as a
spare from Icom.

Thing to watch for though is when you do is a very small spring in the
sliding catch that retains either the base plate of additonal battery pack.
If you are not careful it can fly out and you won't know its missing 'till
you put it back together.

Go carefull.

I agree. it's probably one of the largest problems that all response agencies face.

Here in Manitoba, Canada, alll provincial response organizations can tie into a frequency called the Universal Manitoba Emergency Frequency. This used to be an old Fire Commisioners Office frequency that was absconded with in order to ais in mutual aid response and larger multiple agency response to disasters etc.

Although the police in and around the rural town are usually the RCMP, all police agencies have access to a 'local' simplex frequency for inter-agency comms.

This system seems to work very well, with one exception. The city of Winnipeg, the largest in the province (620,000+) uses exclusively UHF system. There is concern that this poses undue stress whrn the city services are asked to respond for mutual aid. The only service in town that has access to any provincial VHF frequesncy is the ambulance service which only has access to a remote base station used commenly for notifying the city when an out of town unit is comming in for an emergency or routine transfer.

The city and the province is still trying to force a move to trunking, but in our area, this is very expensive alternative especially for the rural services. The debate has not closed on this one yet. We are trying to get them to see that moving to trunking may benefit the city services but will have a very negative impact on the rural communities, mostly in cost recovery.

If anyone has any input as to this problem, I would appreciate hearing from you. Please E-mail 'rewillis@fox.nstn.ca'

Have you tried a crossband repeater setup? In and out on both "sides" of
the problem. It would be assumed the usual Manitoba communications
service can be "heard" sufficiently far enough away so that most
conditions would be covered. Or for that matter a crafted plan of
multiple crossband systems that would cover the entire RF reception area.
Without knowing the topography or the coverage area it is kind of hard to
be more specific.

During the annual Baker to Las Vegas police charity run amateur radio
operators setup temporary systems that provide complete radio coverage
from downtown Las Vegas extending 150 miles into the California desert by
using a mixture of crossband repeater facilities.

2529. Newbie Questions

Newsgroup: rec.radio.scanner
Date: 1996-08-25 00:00:00 UTC
From: mikenet@earth.usa.net

I recently purchased my first scanner, a Bearcat BC3000xlt, and its working pretty well. Right now it is connected to a TV antenna so I'm not sure how well it is receiving. I have ordered a Diamond D-130J. OK, Now for the questions.

1) I have found a couple of freqs in the 39 to 43 Mhz range. What I am hearing is the base to mobile side of the conversation. The mobile to base side is on another freq but I can't find it. What is the best way to find the mobile to base freq?

2) I have a 48 foot free-standing Rohn tower that I want to put the D-130J antenna on. The tower has two large TV antennas on top of it. I will be using a side mount to attach the D-130J. My question is how far away from the TV antennas should the D-130J be? As I understand it if the antennas are to close they could interfere with one another. So, what would be a safe distance from the tip of the vertical element on the D-130J to the nearest TV antenna? Also, is there any way I can modify the D-130J for better reception before I put it on the tower?

3) I plan on using 9913 coax to connnect the antenna. Will it help much to also buy an amplifier to boost the signal? I live in a small town so there isn't to much to hear locally. The nearest large city is about 40 miles (driving distance) away.

4) If you have any interesting WV or OH freqs please pass them along. I live about 40 miles East of Parkersburg WV, I can hear some of the Parkersburg stations and I believe I am also getting some from OH. I bought the "Police Call Plus" book that covers WV and I guess I will also have to buy the one that covers OH.

TIA.......Mike

Bull. John, this is just more of your foolish attempts to convulate
the facts.

I have not posted in the HAM radio newsgroups in months, if not a
year. I have never spammed into any of them.

I simply posted a message about a rather famous gaff you made one day
with your postings, when you posted a rather embarressing episode you
had when you tore up some repeater equipment, that you had been
accused of not being competent enough to handle.

I never made any inference otherwise, and if you take other inference,
that would be YOUR mistake.

If need be, I could post it here for all to interpet any way they
want, I kept a copy.

Rather not do that, but continue the thread with your wild
accusations, and I will.

Have a nice day, and E-Mail me if you wish. Be more than happy to
hear from you!

Sorry for my stupid oversight. Forgot to mention that a 1/4 wave antenna has gain, too, almost as much as a 5/8 wave, but not quite. 1/4 wave antennas are easier to match than 5/8 waves.

I prefer electyrolytic isotropic antennas because you don't have to worry about where you point.

2545. Orange County, California - Fire: 800 Mhz Trunk System

Newsgroup: rec.radio.scanner
Date: 1996-08-25 00:00:00 UTC
From: Jon & Sarah <jevers@earthlink.net>
Message-ID: <3220E499.7FD7@earthlink.net>
Source record: 225319

I would appreciate any insight on the 800 Mhz Trunk System in Orange County , California. I listen to my scanner and hear dispatched calls where the dispatcher assignes the reponding units to repond on "2-India" , "4-Golf" , "4-Foxtrot" , or "2-Echo" . I'm presuming these are channels on the trunking system. Does anyone know the assignment of these channels and the actual frequency .

Also is there a dedicated Dispatch channel / frequency for North Net , Central Net , and Orange County Fire. Please advise and thanks in advance.

I now have 2 AOR-1000XLT radios. I bought my second from a guy who posted
a note on the group indicating how difficult it was to program etc....
I find the AOR-1000 EASY to program....to store a frequency in a channel
number (MANUAL+FREQUENCY+ENTER+PROG+CHANEL###) With this unit if you do a
search and come across a data frequency, you can lock this out of the search!

JOHN

Malex007 (malex007@aol.com) wrote:

heard a crime spree unfold on the scanner yesterday (Sat 8/24) in the Phoenix area that seemed to show the lack of communication or difficulty of coordination amoung different agencies:

Subject steals car from auto Dealership, (Phoenix) commits a robbery (Phoenix), races across town, gets on the Freeway (DPS/Highway patrol), gets to the tempe area, dumps his corvette and steals another car from a car wash (tempe). the two guys split up, one breaks into an apartment and holds up there for hours (tempe), while his partner attemps a robbery and car jacking in Scottsdale.

I have 4 scanner radios here on my desk by my computer. I was able to use one radio to monitor the Phoenix PD Chase frequencies (154.89/453.1) and scan the other phoenix frequencies. I used my second Scanner to monitor the Highway Patrol Frequency (460.325), I used the third radio to monitor the Tempe (860.7375, 859.7375) and Scottsdale (860.9625, 859.9625) frequencies. I used my Sony-2010 to monitor the aircraft frequencies for any helicopter activity.

it seemed that during this entire incident one agency had difficulty figuring out what the other was up to unless a represenative from each agency was standing side by side....Each of the dispatchers (Highway patrol, Phoenix, Tempe,and Scottsdale) acted as if they had no knowledge of what was happening on the other frequencies!

The Fire Departments use an interagency frequency (154.28) thats used by all responding fire units when there is a fire involving multiple fire departments.

This makes the case for an interagency frequency where all agencies involved in a chase or crime spree that goes across jurisdictions can be in instant contact with each other and easily share information....IN most cases, a dispatcher from agency A will call Agency B..Sometimes, a helicopter will come up on the frequency used by the other agency.

** > I've even seen a few shareware templates around designed for
** > scanning frequencies...
**
** That one is from Claris, right? It got good reviews in all the
** magazines of recent times. And the price is not bad, if I recall
** correctly....around $99 ? Its relational database capabilities would
** be a strong plus for situations where WORKS would start to falter.
**
** I think the most important thing for databases and frquency management
** (other records, too) is the ability to not only handle fairly large
** files of 10,000 to 50,000 records, but also the flexibility of
** importing and exporting. There is no way under the sun everyone is
** going to use the same software, but it is important that we be able to

** swap files in a more or less standard format. dBase III or dBase IV
** are fairly standard to most database managers, as are comma-delimited
** ASCII files.
**
** I would put my bottom line down on the import and export capabilities
** of a database manager before the brand name and other aspects,
** assuming it will handle a few thousand records in the first place.
** And to the best of my knowledge, FileMaker Pro meets all
** qualifications and more.
**
** It sure is good to talk about scanner & technical stuff!!!
**
** Rgds,
**
** Bill

If you are talking the BC300, simply enter the same frequency anywhere.

If you have the BC3000 and are getting the prompt in the diplay that tells you the channel is in use on another frequency, simply
press the enter bitton again.

Hope this helps

Radio Shack does make a case for that scanner. I just purchased one of
those scanners this week and I ordered a case for it. It comes from the
RSU catalog. It can come to the store or to your home. It is a made to
fit item. It runs around $20.00, plus shipping.

In this area the city police have the ability to link with the RCMP
(federal).. when it's used, it works well about 70% of the time..

The city police helicopter has a series of radios in it that work very
well.. it can communicate on just about anything anyone has in the area,
including UHF, VHF, trunk, pseudo-trunk, straight 800, etc.

The fire departments in the area thought ahead: There is a provincial
"multi-agency" frequency and all of the trucks on my department have some
of the channels of all the other area departments.

According to jbmckoy@ix.netcom.com..
! Does anyone out there have experience with the VTech 910ADL analog 900 Mhz
! Cordless phone?
!
! I have read about problems with the Digital 900 Mhz VTech Tropez re:
! buttons getting flakey & noise. Wondered if the Analog 910ADL/915ADL are
! good phones ar not.

I've got a VTECH Tropex 900Mhz digital that I like a lot. Yes, the keypad
membrane is prone to absorbing sweat from my head and rendering the keys
hard to press, but it's easily cleaned. The sound quality, though, is
great, as is the range.

2560. RFI and EMI Spray----it works!!!

Newsgroup: rec.radio.scanner
Date: 1996-08-25 00:00:00 UTC
From: w5kft@nts-online.net
Message-ID: <4vpti7$767@news.nts-online.net>
Source record: 225410

A very effective anti RFI/EMI is available and works very well.
This spray is called "Black Box Spray." It was originally developed
to prevent any kind of signal leakage from classified "black boxes."
It is now available in an aerosol spray can that will cover
approximately 12 sq feet of area. It may be used on almost any type
of case to prevent signals entering or leaving the cabinet. A normal
coating on the inside of a cabinet will provide 30-50 db of signal
suppression.

IT WORKS!! Available from Pro Distributors @ 800-658-2027

Any idea why it is so expensive considering that it is basically the
RF section of a scanner on a PC card ? Is the software worth more
than the front panel controls (ie...display, frequency selection
ect.) of a normal standalone receiver ?
What about spurs ? I suspect that their spectral location will vary
depending on the PC used. I'm curious as to the extent of front-end
shielding !?
Someone else recently questioned the selectivity ratings since they
are not mentioned in the documentation. Anyone come up with a spec on
this yet ?
Certainly a novel concept nonetheless !

I left my scout in my car charging via the cigarette adapeter the other night, and I left my rubber duckie antenna from my ICOM A-20 Aviation Tranciever on the Scout. When I left for work in the morning I had 5 hits that were in the aviation band. Being a pilot, I knew these freqs off of the top of my head. Now I live in Southern California, which has the most conjested aircraft airspace in the world and I live 6 miles from 3 different airports. These hits most likely came from helicopters flying at about 500-1000 feet above the scout with 5 watts output.

The Hits were 119.4 Long Beach Tower
119.1 Fullerton Tower
123.85 Los Alamitos Tower
122.75 Air-to-Air
123.025 Helicopter air to air

These were all AM hits.

One thing that I've been looking for for a *long* time, but haven't
been able to find is a piece of voice activated recording software...
It seems that it would be easy enough to write, and I'm sure there's
some out there.

So anyone care to point me in the right direction? <grin>.

I don't know waht Blake is attempting to do this this.

It appears that you are correct that Blake wants to spread
some kind of spamming spew from ham radio newsgroups to scanning
newsgroups.

Because I dont' want to be a moderator. I would need to get a real
internet account for that type of duty & I somply don't feel
like it.

Besides, if I was a moderator I WOULD NOT "get back and even up the
score" because 2 wrongs DON'T make a right. That would be an
abuse of power, the very same thing I have been bitching at you
about.

I'm not totally sure of these freqs, but punch in a few of these:

450.55
455.55
450.25
455.25
450.1875
455.2125
455.65
455.4875

I think most of these are choppers in the Orlando area.

I have a Uniden scanner with an LCD display. If the unit is
mounted under the dashboard, the display can be read easily.
But if the scanner is mounted overhead (as in my van), the
display is impossible to read. The LCD digits seem to fade out
when the radio is above the observer. (I'm making an assumption
that the manufacturer intended under-the-dash mounting.)
Is there an easy fix for this?

> Dave Bernazzani

Hi Dave,

I just bought the BCT7. I am very happy with it. The mobile antenna which comes with the unit is pretty weak though. It is a thin wire antenna with suction cups on each side. You mount the antenna on the inside passenger side of your window. I did not get very good reception with that antenna.

While on the road, when you press the police channel button, the unit will search both police and highway patrol. You can also add 50 channels of your own to this search. The fire has a separate button for searching. What I did, was to program in a bunch of the fire channels into the police/highway bank. That way, it would search all three at one time. If you just use the fire search button while on the road, the unit will not search the mobile extender highway patrol channels or the police/highway patrol channels.

I hope that helps.

Jeff

Really Blake?????????

Please, do tell, I have NO IDEA what you are talking about. How DID I "singlehandedly" tear up other ham repeaters in the Portland area??

What repeaters where these?
When did I do it?
How did I do it?

I have been involved in catching jammers in Portland. But I can not think of any time where I was apologizing & trying to explain.

I guess I am giving you the "put up or shut" routine, like I did when you said you had checked me out with a local 2 way shop about my professional career and you didn't know the name of the shop or person you talked to.

Most scanners have a Search feature of one type or another. The search is
either
manually input ie 31.00 to 32.00 or the scanner will have you push a button
ie FIRE
POLICE etc to find used frequencies. Depending on your location and what
you want to listen to price will vary... If you just want Police, Fire,
etc.. Then a 100 or 200 Channel Scanner with 800Mhz coverage would do..
These are usually priced
at 150-300 New... If you want Military Aircraft etc you will pay more..
Also you have
to decide if you want a Hand Held or Base scanner.. On the question of
recording
all I can say is you want a Voice Activated cassette recorder.
.
What scanner to start with I would say a Bearcat or Radio Shack scanner.
If you
want info on some Bearcat Scanners try http://www.scannerworld.com/
they have listings of features and prices..

I've been reading a bit about the Uniden BCT7 "Beartracker". Grove sells it and claims it has a normal telescopic whip and a "mobile whip" included. What type of antenna is the mobile? Is it magmount? Does it have included cable?

Also, will the state-by-state preprogrammed frequencies scan fire/ems/local police or just highway patrol? I know it can be programmed but for travel it would be nice if it could scan more than just highway patrol in a semi-automatic and quick way.

Thanks in advance,

Dave Bernazzani

Does anyone out there have experience with the VTech 910ADL analog 900 Mhz Cordless phone?

I have read about problems with the Digital 900 Mhz VTech Tropez re: buttons getting flakey & noise. Wondered if the Analog 910ADL/915ADL are good phones ar not.

I am looking to replace a cordless phone and wondering whether to go with a low-end analog 900 Mhz. like this one, or to stick with the 46-49 Mhz cordless phones for now. Any recommendations appreciated.

Thanks!

From: pbaran@awinc.com
Message-ID: <4voieh$cpd@kryten.awinc.com>
Source record: 225486

I am currently looking at possibly buying a PRO-2036 from the local "Shack". First of all, I guess these radios are made by Realistic for Canada & Australia only, & I haven't been able to find anything about them on the 'Net.
The appealing option of this radio is the built in CTCSS board. The radio features 200 channels & sells for $529 (Canadian $). I'm wondering if there may be other radio options in around the price range & with the same features.
Does anybody have ANY info on this radio?

Thanks in advance.

Anything cool happen on the radio today? Any chases, crashes, are the fires in your area? How about the storm in or coming to Fla? Are there emergency frequencies to get the real story?

Isn't this what this group is great for?

Anyone have NYC surveilence frequencies?

Peace

,\\ichael

I purchased this phone and returned it the next day. I found the range to be poor and the sound quality was very poor. However, I did like the compact size and it was a comfortable phone to use.

If range isn't that important and you can deal with a scratchy type sound, it might be OK. Otherwise stay with a high quality 46-49 Mhz...or go for the gold and spend more on a good 900Mhz.

Michael

2612. Gain Antennas and the 5/8 wave

Newsgroup: rec.radio.scanner
Date: 1996-08-25 00:00:00 UTC
From: hduff@ica.net
Message-ID: <4vorh7$1l2@master.ftn.net>
Source record: 225490

Vertical gain antennas and the ever popular 5/8 wave.

Ever wonder why the 5/8 wave vertical antenna is a popular choice for mobile communications ?

An isotropic antenna is one that has a radiation pattern like a sphere (theoretically) . That is, it transmits and receives equally well from all directions. Practically speaking, a 1/4 wave antenna exhibits a similar pattern. Such an antenna is usually simple by design but offers acceptable performance in many cases.
However, for ground wave communication there is little use receiving or transmitting directly above into the sky or down into the earth. It is preferable to concentrate your signal/reception across the horizon, to be able to communicate with stations on the ground.

Gain antennas are an effective way to get greater range out of communication stations since it enhances both the transmit and receive performance rather than simply increasing the TX power.
You can effectively reduce the skyward pattern of the antenna and concentrate it at a lower angle of radiation. A simple analogy might be to think about the effect of sqeezing a sponge rubber ball at the top and bottom. What you lose from the top and bottom, you gain in the horizontal plane. The same effect ocurrs with gain antennas.

Antennas that are cut to a non resonant wavelength will exhibit different radiation patterns. "Doesn't this then cause an SWR mismatch" you ask ? The answer is YES but a simple matching coil (at the base of an antenna) with a properly located tap point will bring the impedance back into the correct range (usually 50 ohms). Virtually any length will work for an antenna once it is realized that the impedance must be maintained, However, the angle of radiation varies depending on the length. Sort of like squeezing that sponge rubber ball more on one end than the other, the increase to the horizontal plane will distort more to the top or to the bottom.

The phenomenon of altering the radiation pattern then works in our favour and it just so happens that an antenna cut to 5/8 of the required wavelength (coil included) offers the optimum angle of radiation with an increase in coverage for vertically polarized ground wave communication.

I hope you find this article of interest as it can be applied to enhance your scanning performance and pleasure !

You bet. An economical approach to getting the most for the least.

> Does anyone make a device that would accomplish this?

Every Radio Shack store in the world has a choice or two, So does most any TV or video specialty store. The device you want is called a "splitter".....and it's far more than just a "tee" connector, though in effect, that's what it is. A splitter is designed to minimize losses from the splitting process.

>For the record I have a Pro-2035 and a Pro-2006.

It doesn't matter WHAT you use, though.....

> Is there a down side to stacking the units one on top of the other???

Yes, two at least.

A splitter does exactly that......sends half the power received by the antenna to one receiver, and half to the other. You're looking at a minimum of 3-dB splitting loss relative to one receiver and one antenna.

Two scanners in close proximity can feed each other their PLL and L.O. products to create a grand profusion of "birdies" and other interfering signals. A physical separation is advisable.

Order the service manual for the CTR-69, and study the schematic
diagram in the vicinity of the VOX switch. It will switch in and out
a set of capacitors or resistors or both. Changing their values will
change the VOX characteristics.

I like Santa Barbara County's rigs myself. I love the white and with the
blue stripe they're pro. And what a bitchin logo. Ventura County BTW is
going to get three type 2 rigs very similar to Santa Barbara County
Engine 313 later this year for stations 20, 25, and 28.

Ok, now, on the color thing. Ventura County has two slime green rigs,
they are OES units, OES 231 stationed at fire station 35 in Newbury Park
is a 1987 Ford/Westates, which is assigned as engine 135 and OES 214 is a
1972 International Van Pelt 2110, stationed at FS 46 in Simi Valley,
designated E246, both are slime green, and Ventura City has one OES rig,
OES 230, identical to OES 231. Fillmore Volunteer FD also has a slime
green rig, an old 1970s vintage Ford/Van Pelt. Oxnard had all of thier
apparatus slime green from 1971 to earlier this year when they began to
switch back to red. They have re-painted all of thier Macks, but the
Peirce Lances are still green as well as all of thier ladder trucks and
rescue sqauds. All of the chief cars have also been painted red.

Those are all frequencys used by the media .. general ranges to scan for
media transmissions are 508, 450, 455, 161 and 26 MHz ranges.
450MHz & 455MHz ranges are the most common. Transmissions in the 26MHz
range are mostly from networks, NBC, CBS, etc..

I have the 960 VTech (my second phone) and I'm quite pleased with it. Digital scrambling over 900 Mhz (I tried listening in on my onw phone conversations with my scanner and got nothing but noise). The phone works well--clearly and reliably. I haven't tried it over any great distance--but it has been fine over the limits of my house, from the basement to the second floor. I wouldn't use a cordless that anyone else could listen in on.

We exchanged e-mail on the pros/cons this scanner. Personally, I would go with the AOR2700 instead. The current low price promo that I've been hearing about--one person told me she was quoted $209!--computer control and auto programming being the deciding factors.

I noticed on my CD-ROM that it listed a number of features and alongside one of them it said something like "Mac version only" and I suspected that there might be two versions on the CD because of it. Yep, there are, which makes this database a terrific option for those of use running Macs and PCs.

I am new to scanning and bought the BC3000XLT from Grove in July, after lots of independent research. I have nothing to compare it to, but I am very pleased with all aspects of the unit and am glad I got it. I'm in Fairbanks, AK, and didn't think I'd need or want the 400 channels but already I have programed 300+. It takes a while to get used to all the programming buttons, etc, but it's very well designed.

2630. Active VHF/UHF Antennas

Newsgroup: rec.radio.scanner
Date: 1996-08-26 00:00:00 UTC
From: georgef@prolog.net
Message-ID: <4vqq1s$sht@news2.ptd.net>
Source record: 225321

I've been thinking of getting an Active Antenna for use with my scanners. I currently have a discone antenna that works well, but want something little better. What 'good' active antennas exist for UHF/VHF?

Also, I've tried using a TV Preamp, that just totally sucked when connected to the Discone.

Thanks,
George

Scared?

> I would need to get a real internet account for that type of
> duty & I somply don't feel like it.

I can well imagine. Lots of folks would like to have a chat with you off to the side, in private. I'd like to see if ol' Scotty Gustaferson believes in equal treatment and loads up your mail box. As it is, he can't get to you, so you've gotten off "scot" free, no pun intended. He's laid some heavy preachments on the rest of us.

>Besides, if I was a moderator I WOULD NOT "get back and even up the
>score" because 2 wrongs DON'T make a right. That would be an
>abuse of power, the very same thing I have been bitching at you
>about.

But.......but.......but.......I am trying to tell you it would be all right with me. You could get your jollies that way and we could all live in peace for here-ever-after. It wouldn't be an "abuse" or a wrong if I LET you boot me off. See?

You're all toasted and sore because you didn't have any say-so in the matter when I gave you the heave-ho. And that wasn't an abuse or a wrong, either. Look at the way you act here, fer instance. I'd give you the Size #13 crosswise AGAIN, for that matter.

No sense in having a moderator unless he's going to moderate. Moderate means follow the rules. You failed. Not once. Not twice. But three times. That's strike three. You're out. Sooooo, if I was moderator of this new proposed thingamabob, my first order of business would be to prepare your sailing papers. And then fetch you another thunderous kick to send you sailing "through the air with the greatest of ease, like the man on the flying trapeze."

Thusly, since I would do that to you if I were the moderator.......I would LET you do it to me, if YOU were the moderator. That's only fair. Ain't nuthin about me unfair, pal. I'm fair as fair can be.

Now if you begged and did some real obscene sucking up, I might let you stay. But I'd never beg you to let me stay.....I'd just let you kick me off and then lay down and laugh at you. I laugh at you anyway because I think you're a very funny fellow.....you and your missus, ol' Danny Girl... :-))

Now since you don't want to be the moderator, maybe I'll just pitch my hat into the ring and see what happens. You better start working up a good propaganda campaign.

>to the Discone.

Right. An active antenna is a preamplified antenna. It is next to
impossible to make a decent wide-band, low-noise, high dynamic range
preamplifier for low dollars.

Best bet is to use as good of an antenna as you can afford, and
install it as high as you can afford.

Rgds,

Bill

From: dconti@carroll.com
Message-ID: <Dwq91H.C73@news2.new-york.net>
Source record: 225328
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I've noticed what may be a problem on the signal strength meter of my AR8000, and was looking for feedback, suggestions,etc...

When receiving a strong signal, the meter WILL NOT go full scale, but only half way. I did a side by side comparison with an AR 3000a, same antenna, frequency, station, and the 3000a goes to full scale, while the AR 8000 does not. Also transmitted one foot from AR8000 and scale would only go up half way....not full scale.

Concerned that his might be affecting radio's performance, and that itr might be defective....

All assistance is appreciated...

Sorry No info but I'm quite sure this scanner is now on sale here in Vancouver for $329.00 or something like that. Check your August specials. The Pro 26 is on sale here right now for $379.00 (regular $529.00). Several other models are on sale as well. Unfortuneately we don't seemd to have the 1000 channel units up here yet, the Pro 2035 (I think that right) and the Pro 2042. They're not even in the catalog but a new catalog is due soon.

Here in Wisconsin there are frequencies in place that are common
state-wide for fire, EMS, and law enforcement.

As jurisdictions upgrade, they will usually purchase radios capable of
handleing all of these common frequencies. The additional cost of 48
channels vs 16 on a hand-held is nominal. Most jurisdictions in Wi
are still on VHF or UHF, and the mutual aid freqs are as well.

Mark

The Family Radio Service is indeed "an advanced Walkie Talkie",
intended for low power use by families and small groups, i.e. around
the neighborhood, camping trips, etc. Operation is half-duplex ('simplex'),
no repeaters, and no license is required.

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

FRS - Family Radio Service [95.627]

Ch	Freq	Ch	Freq
1	462.5625	8	467.5625
2	462.5875	9	467.5875
3	462.6125	10	467.6125
4	462.6375	11	467.6375
5	462.6625	12	467.6625
6	462.6875	13	467.6875
7	462.7125	14	467.7125

The FRS was adopted on 10 May 96 and will be authorized
by July 96. It uses FM with a peak deviation of +/- 2.5 kHz.
Maximum power is 0.5w.
Channels 1 - 7 are shared with GMRS.

From: markl9@aol.com
Message-ID: <4vrlmv$si5@newsbf02.news.aol.com>
Source record: 225338

What's the story with leather cases for the BC3000XLT? Everywhere I check, they all say that they're back-ordered and can't get them in. One place even told me that they didn't believe the cases even EXIST as noone has been able to get them.

Why did the BC2500, and the 200 and 100 before it, all come with cases in the box, but the 3000 does not?

Most of us would have GLADLY paid $20 more for the product if the company threw in a case with it! After all, the 3000 is roughly the same size as the 2500 was, and the box IS the same size, so the case would have fit in there just right.

Anyone know of cases for the BC3000?

>when the radio is above the observer. (I'm making an assumption
>that the manufacturer intended under-the-dash mounting.)

> Is there an easy fix for this?
The quick answer is NO..
The crappy (but honest) answer is YES, mount it below eye level.

The longer answer is NO, because...

(technofreeks: this is a laymans answer not a definitave technical
anser so please dont split hairs..)

There are certain technical restrictions associated with the
manufacturing of LCD devices. The problem is not associated with the
radio manufacturer.

Generaly LCDs are made with a viewing angle known as "top" view,
"middle" view or "bottom" view.

What this means is that lcds can only be viewed (and seen clearly)
over a narrow viewing angle left to right and also above to below the
central axis of the lcd.

Pocket calculators or other hand held devices use "Bottom" view
devices because the viewing angle usually from below the central axis.
Dash mounted radios would have a "Top" view cos the viewing angle is
normally from above the central axis.

It is possible to "bias" or alter a vewing angle of an lcd to a
certain degree. BUT this is built in to the circuitry of the equipment
that has the lcd. This is often incorporated in things such as laptop
computers but not on things like radios!

It is not practical or posible for the average hobbiest to mess with
the viewing angle. the benefit : hastle factor is too high!

Source record: 225340

dconti@carroll.com (Daniel M. Conti) wrote:

Hello Daniel,

My AR8000 is very reactive to incoming signals and does go fullscale. It could well be that yours has a problem BUT is the problem just the S meter or is it associated with the front end sensitivity of the receicer? Read on for how to find out which is the case...

Doing a direct comparison of 'S' meters from one radio to another is not to be recommended.

The 'S' meter on amateur/hobby/commercial radios is only intended as a RELATIVE indication of signal strength and not a difinitive readiing of a numeric value of the strength. The reacion of an S meter can vary from one radio to another, even of the same brand. (although not so much as they used to!)

Often the 'S' meter reading (high 0r low) has no bearing on the sensitivity (or otherwise) of the receiver, however this has to be taken in context of the sutuation.

Let us say that you have a receiver with absolutly incredable sensitivity and performance - It is very possible for the 'S' meter to react in the with only half scale (or worse) readings. This depends on several factors.

a) poor s meter design
b) s meter circuit not set up properly
c) component failure in the s meter circuit

A fairer comparison of the sensitivity of a VHF/UHF radios is (in the absence of very expensive test kit) is to use the human ear and brain.

The following test IS reliable. It uses your judgement of noise level in the background of a signal:-

It is important to use the same aerial, coax, connecters etc, only change the radio. (as you did in comparing the s readings 8000 Vs 3000a)

1) Using radio number one.
2) Tune to a WEAK FM station.
3) Carefully listen to the BACKGROUND noise (not the speech)
4) Note the TYPE of noise that you hear

You are listening for Noise types:
(a) Very ROUGH noise - lots of harsh crackling - (speech unreadable)

(b) ROUGH noise - still much crackling but noticably reduced (speach readable but with dificulty)
(c) ROUGH to SMOOTH noise. The crackilng is still there but almost gone and a smooth hiss can be clearly heard (speech readable)
(d) SMOOTH noise. A clean steady 'hiss'. No crackling at all
(e) Almost FULLY QUIETING. The smooth noise is just detectable. (Speech very clear)
(f) FULLY QUIETING. the backgroung noise (his or crackling is non existant, un-detectable. (speech is loud and clear)

4) Replace radio with number 2. Listen to the same signal and note the DIFFERENCE in the perceived backgroung noise level.

Do this test with the AR8000 Vs the AR3000a. Assuming the AR3000 is spot on in sensitivity, you will soon see if the 8000 is ok or grossly deaf or if it is only the S meter problem.

This gives a good, simple and accurate comparison of the radios in that band tested. One radio may perform better than the other (say) on low end of VHF but the other radio may perform better on UHF. You should make notes of your findings and do the same tests, say every 25 - 50 Mhz .....

For the non technical readers you can use this background noise test as fairly reliable in comparing improvement (or otherwise)in aerials, coax, or any other parameter change. The test does assume that the weak transmission is at a constant transmitted level AND that it is not a weak signal being bought in by freak weather conditions!!!
==========
BTW: I have looked at the schematic of the 8000 and can see no adjustment pot for th S meter. The S meter amplifier is U7b (uPC358), it's gain appears to be controlled by a 47k resistor between pin 6 & 7. I can give no recommendations of action.

Imagine it!!!! Think of the pickup range the scanner would have
assuming the person went to heaven. Scanner doesn't even need AC so no
extension cord to earth. WOW.

2651. Spread Spectrum Phone 900Mhz Question

Newsgroup: rec.radio.scanner
Date: 1996-08-26 00:00:00 UTC
From: dteague@csc.com
Message-ID: <4vs51j$998@explorer.csc.com>
Source record: 225342

I understand the idea of spread spectrum, but I've never had any 'hands-on' on any equipment -- thus the following question:

I bought a VTech Tropez Regency 900Mhz SS phone this last weekend (don't know the model #) and am hearing a noise while connected that I can't explain. I don't hear it at the dial tone, but it's at a low level, so the tone probably masks it. It's not erratic like static or QRM, the best way I can describe it is like a 'clicking' or 'ratcheting' noise. Sort of like the 'baseline' level of a geiger counter, maybe, but completely consistent at the same level, never rising or falling.

Anyone know what this could be? Could it be 'out of phase' or something similar? Would calling VTech help, or would they only tell me something real useful like 'reorient the receiving antenna'? Or should I take it back to the store and try another sample?

Any advice appreciated.

>I'm not sure how well it is receiving. I have ordered a Diamond
>D-130J. OK, Now for the questions.

You unloaded a big question right there. First of all, how is the TV antenna mounted? The normal position for TV signals is in the horizontal plane, which would look like below if viewed from the back:

---------O---------

However, 99.9% of all signals of interest to a scannist are vertically polarized, so your reception from the TV antenna could be improved by as much as 25 dB if it were mounted like this:

```
|
|
|
|
|
O
|
|
|
|
|
```

25-dB is a monstrous improvement, and well worth rotating the antenna 90-degrees.

Gosh, there is no set offet of repeater/mobile combinations on VHF-Lo like there is on UHF. It depends on the user and their particular allocation. So get familiar with the below allocation chart first:

30.5800 30.8400 Business - Petroleum; Industry; Misc. 20.0
30.8600 31.1400 Motor Carriers - Busses 40.0
30.8600 31.9800 Forestry Conservation (State 31.18 and up) 40.0
30.8800 31.2400 Business 40.0
31.2800 31.9600 Special Industrial 40.0
32.0100 32.9900 Federal Government (Army/Navy/Parks/Etc.) 20.0

33.0200 33.1000 Highway Maintenance/Emergency 20.0
33.1200 33.4000 Business (Mostly Petroleum Production) 20.0
33.4200 33.9800 Fire (.42;.46;.50;.54;.58;.62;.66-Mobile) 20.0
34.0100 34.9900 Federal Government - Misc. 20.0
35.0200 35.1800 Business - Misc. 20.0
35.2200 35.6600 Mobile Telephone (Base)/Radio Paging 40.0
35.2800 35.5200 Special Industrial 40.0
35.6400 35.6800 Public Safety Paging 40.0
35.7000 35.9800 Business (Industrial .74-.86) 20.0
36.0100 36.9900 Federal Government 20.0
37.0200 37.4200 Police (Local Government .10;.18;.26) 20.0
37.5000 38.0000 Utilities - Power & Water/Radio Astronomy 20.0
38.0000 38.2500 Radio Astronomy NA
38.2500 38.9900 Federal Government (Mostly Military) 20.0
39.0200 39.9800 Police .26;.30;.34;.38;.66;.70;.74;.78 Mob 20.0
40.0100 41.9900 Federal Government 20.0
42.0200 42.9400 State Police (Mobiles .18-.30; .66-.78) 20.0
42.9600 43.1800 Business/Special Industrial 20.0
43.2200 43.6800 Mobile Telephone/Paging 40.0
43.2800 43.5200 Special Industrial 40.0
43.6400 43.6800 Public Safety Paging 40.0
43.7000 43.8400 Busses 20.0
43.8600 44.4400 Trucks 20.0
44.4600 44.6000 Busses 20.0
44.6200 45.0600 State Police (Mobiles .78;.82;.86;.90) 40.0
44.6400 45.0400 Forestry Conservation 40.0
45.0800 46.5800 Local Government (Police; Fire; Etc.) 20.0
46.6100 46.9700 Cordless Phones (Base) NA
47.0200 47.4000 State Highway Maintenance 20.0
47.4200 47.6600 Spec. Emergency (Red Cross is 47.420) 20.0
47.6800 48.5400 Power and Water Utilities 20.0
48.5600 49.5800 Petroleum/Forestry 20.0
49.6100 49.6500 Federal Government 20.0
49.6700 49.9900 Cordless Phones (Handset) NA
49.8200 49.9000 Walkie Talkies
50.0000 54.0000 Amateur Radio

Identify the allocation for the base you're hearing, and then look for the mobiles in any of the same allocations above or below the base freq. Usually, the bases will be the higher frequency and the mobiles, the lower, but on VHF-Lo, most anything goes. 600-kHz is about the minimum separation between mobile and base freqs, and more is ideal.

>2) I have a 48 foot free-standing Rohn tower that I want to put the
>D-130J antenna on. The tower has two large TV antennas on top of it.
>I will be using a side mount to attach the D-130J. My question is how
>far away from the TV antennas should the D-130J be?

At least one wavelength for the lowest critical frequency in your list of interests. For all practical purposes, though, use 108 MHz as the

lowest, the wavelength of which is just under 3-meters or about 10-ft.

> As I understand it
>if the antennas are to close they could interfere with one another.

Interference is relative. They can "interfere" such that some directions are worsened, while giving a beam/gain effect for other directions.

> So, >what would be a safe distance from the tip of the vertical
> element on the D-130J to the nearest TV antenna?

Like I said, at least 10-ft. More if you can manage it.

> Also, is there any way I can modify
> the D-130J for better reception before I put it on the tower?

No.

>3) I plan on using 9913 coax to connnect the antenna. Will it help much
>to also buy an amplifier to boost the signal?

Not unless you spent big bucks. And I mean BIG. Forget preamplifiers. Just use the good coax and put the antenna as high as possible. And give some thought to remounting one of those TV antennas in the vortical plane. Now THERE will be some performance!

>Can this database merge two columns into one?

I don't know about FileMaker Pro, but most databases would not be able
to do that directly. What you would do, easy enough is copy the two
columns or fields out into a text file; massage and edit as needed,
and then copy back from the text file into a field or column, and
delete the other two. Or copy into one, and delete the other. This
is easy eenough with any database operation.

>that the manufacturer intended under-the-dash mounting.)
> Is there an easy fix for this?

No. Well, probably not, but maybe.............

First, D.Gray@AutoComm.cityscape.co.uk (Donald Gray). explained the technical side very well. That's why you can't fix it very easily. But there might be a fix.........

Remove the front panel from the scanner without actually disconnecting any wires or conductors. Devise a mechanical method of re-mounting it to the front panel, but with the top angled forward by 45-90 degrees with respect to the bottom. So much the better if the bottom left and bottom right mounting screws of the front panel can be left in place and just the top swiveled forward so that the face is pointed downward.

Then devise a shroud or other means of covering the opening and fixing the panel rigidly in place.

From: Karl Ulrich <khulrich@uncc.edu>
Message-ID: <3221BAC7.3F65@uncc.edu>
Source record: 225347

I'm a newbie to scanning, so please forgive any ignorance that may
come across in this post.

I've been looking at a lot of web pages about scanning, and some seem
to say that the BC200XLT would be a good choice.

I've found one at a local pawn shop. It seems to only come with one
battery, and nothing else (no box, no power supply). So, how much
should I look to pay for such a scanner? How much did they sell for
when they were new?

Any opinions about this scanner?

please e-mail any responces, as I don't look at this newsgroup often

thanks in advance

I've got the VTECH Platinum 2 line version and have also been very pleased with it. I *haven't* had any problems with the keys on the handset but, have had the occasional problem with the volume keys for the speakerphone on the base sticking. (Probably from the fact that my 4yr old sometimes plays with them with sticky fingers now and then. {BSE GRIN!}) Compared to all the 46/49MHz phones I've used in the past and most of the 1.7/49MHz phones this unit has phenominal range. (I can walk the whole 1/4 mile down to our mailboxes and carry on a clear conversation even though the base is in a metal building and only has one window for it's `shot' to the outside world on that side.)

Dear All

I have just finished a major programme of refurbishment work to my website which greatly improves the appearance and will help you navigate round the 120+ pages.

http://www.ibmpcug.co.uk/~g4sgi/

Subjects include:

SWL working aids covering: Foreign Language Recognition, Propagation, Bandplan, Modulation. MS-Windows help file version available for download.

Demo of FREE PC-MONITOR DOS software for the FRG8800 and FRG9600

Information and demo of MUFsight MS-Windows propagation predicition software implementing the MINIMUF algorithm

Information and demo of MS-Windows control software for the Yaesu FRG-100 and Icom R-7100

Information and demos of leading AOR control software (including details of forthcoming Data Master software for the AR7030/AR3030)

Loads of links to Broadcast stations, radio dealers, personal pages and other www resources on the Internet

Feel free to take a look and let me know what you think.

Apparently, Radio Shack (Canada) has the Pro-26 on sale right now for $379 Canadian which is roughly $276 U.S.

This sounds like a pretty darn good price. Isn't it true that the Canadian version of the Pro-26 can be modified for cellular coverage?

>back to the store and try another sample?

I don't know if the Tropez is frequency hopping or direct sequence. I'll guess it's a freq hopper like most others. The only direct sequence phone I can think of is the Escort.

You are probabaly just experiencing interference. Spread spectrum devices are not completely immune from it.

Freq hoppers do just what the name implies, they hop around on a number of frequencies. The minimum nuber is of frequencies is 50 for a freq hopper.

Most phones hop at rate of about 200 to 300 msec per frequency. (the max allowable is 400 msec per frequency) If the radio lands on a frequency that already has something on it, another 900 MHz system for example, the data in the burst(s) on that frequency can be blocked. Since you are talking in real time it won't bother with retries., you just lose the data for that time. Since all frequencies in a frequency hopping system must be used equally you will probabaly hit these bad freqs several times a minute.

Real smart freq hoppers can "train themselves" to avoid interference. If they hit a bad frequency more than a couple of times, that frequency is temporarily removed from the hopping list. I don't know if any of the FHSS phones out there do this.

Regards

Dear Sir,

In reply to your recent post to a Amateur Radio News group. A couple of notes:

1. Pyramid games are quite illegal. Always have been, always will be. You should be investigated. Your internet privlidges should be permanently revoked, and you buns should rot in jail for the next 8-15 years.

THE INTERNET is not some new vehicle for tired old cons. We wjo use the internet and don't want to see it regulated worry about "holes" like you.

2. No one who reads these groups accept those named "illegal activities" care about your con and wish you would stop wasting space. If you were proud of what you were doing, your NAME would appear in the header instead of some insane name like "MoneyMan"

3. Scum like you are the lowest form of predator in the world, you and all the pedophiles of the world should be the victims of WW III.

Sincerely,

Brian D. McKinley, Ph.D.
56 Church Street
Kingston, PA 18704

Red made sense when all cars were black (remember what Henry Ford said).

These days vehicles come in any color you can imagine, including neon and dayglow shades. Also, with the soundproofing and bazillion watt stereos in modern cars the emergency sirens aren't that noticable anymore either.

More lights! More lights!

I saw a segment on either Beyond 2000 or Next Step on the Discovery channel about some technology they're testing in Australia where an emergency vehicle sends out an RF signal with a range of a couple of hundred feet. Cars equipped with the right sensor have a dashboard warning light flash to let the driver know there's an emergency vehicle somewhere close by. I guess the idea is you make the sensor mandatory in new cars or something.

Hey, Donald, , , That was a great explanation. I had the same problem with my PRO-2006, when I wanted to mount it on a shelf ABOVE my computer.. I could no longer read the readout ! My solution was to bend a piece of thin sheet metal in such a manner so that the rear of the scanner was about one inch higher than the front. voila! problem solved. Transmorgafie this solution to the van, , , just aim the front of the reciever at the viewer, with the rear end raised..

Peter-

The 2036 was also released in the US... It's a BC 890 that has been modified slightly to take care of a couple of major problems. It's an OK radio, but not a great one.

The just released 2045 ($349 US) also has a CTCSS option and is a MUCH better scanner. There is also the BC 9000 which may be available in Canada for not much more money than the 2036......?

Good luck.

Get a schematic for it and find the contrast section for the lcd panel,
by changing a fixed resistor (could be a small variable on board)
and putting in a variable, the contrast can be changed for various
viewing angles. Without looking at the schematic for the scanner,
I cannot tell you which resistor (pot) it is.

Then direct sequence must mean it scrambles the signal on one channel at
a time. But doesn't spread spectrum mean spreading the signal over
different
channels?

>communication?

No scanner made or imported after April, 1994, is capable of being
modfied for cellular. The TDDRA of 1994 saw to that. You'll have to
pick and choose from the below list, if cellular capability is what
you're after:

Here is a list of all those scanners of which I am aware that are
capable of cellular restoration:

PRO-2004 BC-855XLT *3 Regency 4030
PRO-2005 BC-200XLT Regency 1600
PRO-2006 BC-205XLT
PRO-2022 BC-760XLT *4
PRO-2026 *2 BC-700XLTA *4
PRO-2027 BC-890XLT *4
PRO-2030 BC-950XLT
PRO-2032 BC-2500XLT *3
PRO-34
PRO-37
PRO-39
PRO-43 *1
PRO-46 *2
PRO-51 *2
PRO-23 *2

Note 1: Date of Mfg code 1A4, 2A4, xA3, xA2 (label in
battery compartment), or no "A" in the serial
number.

Note 2: Date of mfg code 1A4, 2A4, -A3, -A2 (label on
back).

Note 3: Date of mfg code must not end in the letter
"D", except for OAID.

Note 4: Date of mfg code must not end in the letter
"D".

For instance, PRO-43's imported before March, 1994, are
modifiable, while some brought in during March and all

thereafter are impossible to modify. Date codes of any
-A2 or -A3 and only 1A4 and 2A4 are assured of being
modifiable. 3A4 and up probably aren't.

The above list does not include those scanners that were
naturally capable of receiving the full 800 MHz band,
without modification, some of which include:

J.I.L. SX-400 AOR-950 Icom R-7100
Regency MX-4000 AOR-1000 Icom R-1
Regency MX-5000 AOR-1500 Icom R-100
Kenwood RZ-1 AOR-2500 Icom R-9000
Uniden BC-800XLT AOR-3000 Icom R-7000
Yaesu FRG-9600 AOR-8000

Some of these radios, if still current, had the cellular
removed by the factory after April, 1994.

Yes and no.
Its illegal to listen to a transmission and then inform another party the
details of the call.
So while we listen, and while we sometimes talk about it, we don't do it
in public (the Internet) without the threat of incarceration.

It is tough. The freq I am most interested in is 42.1000. This is the WV state police. I found one mobile on 42.2600 and another on 72.3600. The difficult thing about this is that there seems to be several base stations on 42.1000. I hear different people calling different units. How do they keeps things straight with so many base stations on the same freq?

Thanks for the advice. A 10 foot spacing would probably allow me to put the antenna 30 to 35 feet off the ground. I would like to put it right at the top of the tower (close to 60 feet) but can't take down the TV antennas.

NFX v1.3 [000]

2711. 9913 coax

Newsgroup: rec.radio.scanner
Date: 1996-08-27 00:00:00 UTC
From: mikenet@earth.usa.net
Message-ID: <500ia8$iu8@earth.usa.net>
Source record: 225102

I plan on using 9913 coax when I put up scanner antenna up. I have read some messages that 9913 can be difficult to use because it is so stiff.

I have recently seen some ads for "flexible" 9913 coax. It says it is "9913 foil + 95% braid 2.7 db @ 400 Mhz". Would it be better to pay a little more for the "flexible" 9913 or is the regular 9913 really not that difficult to work with as long as you don't bend it to much?

BTW...The ad does not say this coax is made by Belden. Is Belden the only company that makes 9913 coax or can anyone make it? Should I use Belden only?

Mike

Source record: 225104

I have the same scanner. Happy enough. Been good for 5 or so years now. Note, however, that it runs off a ni-cad battery pack, which is part of the unit. It therefore needs the power supply to charge the battery. Charger is 12v 500ma.
Good luck,
jeff

2714. CTCSS Board & Tone Question

I just picked up the new Metroscan book for the local HRO and it gives the Tones for most of the frequencies. But some of them the tone is given as CS.

My question is, of course, what does CS stand for?

Thanx in advance,

Mike

We Brian in its simpliest terms it means Good Bye.

It is one of the codes that are used by many people on various two-way
radios ie Hams,CB users etc.
Hope this helps. Try having a look in your local libary for Ham radio
books which will give you a list of all the common codes so next time
you see or hear one you can lookit up on you copy.

All the best on you listening

Alan Chiavassa.

2716. Mods&tricks for PRO2026 Please

Hi There
I have just aquired a realistic PRO 2026 scanner and i would be
very greatfull for any details on mods and tricks for this unit. Its
only a couple of weeks old so it hasn't had anything done to it.

Any info is greatfully appreciated

Alan

you can e=mail me direct at the address bellow

tax@bbs.cmix.com

Thanks.

I do not believe your scanner would ever stop on the correct frequency
due to the spread spectrum technology.

You are not missing the point of spread spectrum are you?

Same receiver, same mod (one 1/2" wire jumper). I did mine a couple of months ago in about 15 mins. Instead of playing with the CPU chip I followed the trace on the PC board out to a couple of small solder dots and jumpered there.

It gives an image of the upper cellular (base) band (868 - 896 mhz) on the 360 - 387 portion of the military UHF band. To find out the freq you are in fact monitoring, just add 508.78.

I compared this mod against my modified PRO-43 (which displays true freqs, and it worked very well if you don't mind not knowing the exact freq without performing the addition.

BTW thats the same price I payed for mine, but with taxes and all up here it came to just over $450 CDN. You'll have to check into the tax angle.

Kip, Victoria, BC

Durham does the downconverter mod available for all US or Canadian Pro 26s or will sell you one (for a lot more money) which has the UK (or as they say Government) CPU in it.

The Pro26 sold in Canadian RS stores can not easily be modified for continuous coverage. The Cheap downconverter mod though is pretty good however.

Listening to cellular gets pretty boring after a while. You just want to phone up some of these people and explain to them that they are taking on a radio especially when they are talking about other people that have no idea the discussion is being broadcast to millions.

The best place to use it is in a resturant or elevator to get someone to shut up and get off the phone.

2721. AR8000 AM filter mod

Newsgroup: rec.radio.scanner
Date: 1996-08-27 00:00:00 UTC
From: klimasewski@fccvde.enet.dec.com
Message-ID: <4vv0sj$7i2@mrnews.mro.dec.com>
Source record: 225198

I have designed a switching scheme that allows the user to select
the stock 12KHz AM filter or the narrow SSB 4.0KHz while still in
the AM mode. I have found this to make a BIG difference when trying
to receive a weak shortwave station next to a very strong one.
The only part required is a switch and some wire.
I have heard of another mod that uses 1N914A diodes along with a switch
that is more complicated to install. My mod has a large diagram that
clearly shows where to install the switch.
This mod has no effect on the use of the DS8000 speech inversion accessory.

Send me email if interested.

>Good Luck
>--js

I got some info from EDCO indicating the US price was $699. Way too
expensive in my book. Yeah, it is a neat little gadget, but just
doesn't do a hell of a lot. Not PL decoding, no "hit" counter, alpha
tags too small to be very useful, slow scan rate, etc...

I did see some spec that listed sensitivity, but can only recall I
wasn't impressed with the number. I might pay $200 to $300 for
something like this....scratch that....I doubt I'd pay that much.

Just my 3 cents (adjusted for inflation). Your mileage may vary.

Thanks but tpenn has one !

Paid about $300.00 brand new from RS.
It seems a high price to me on a discontinued item.
Maybe it's supply and demand??
People want the cellular thing,no law against listening
up here in Canada(i think?)
BORING STUFF to start with!!

Robert Barker (robert@mail.eden.com) wrote:
: Radio Shack has their new 1997 catalog and surprisingly they did not
: charge $3 for it. They only asked for my name and address to update
: their computer. It was already in their database. It still does say
: $2.95 on it so I'm wondering if other stores would charge and give the $3
: coupon sticker or whatever. My catalog did not have the $3 off coupon
: since I got it free.

I went into one 6 months ago and they gave me the catalog free. I'll bet their policy is to give one away of someone asks, but they have a price on it to make the customer feel like they're getting a good deal.

BTW, I was in an RS not too far back and they had those free Prodigy and Netcom disks sitting out on a rack. With $5.95 price tags on them (I am NOT making this up!). Sleaziness of the highest magnitude! The background music in their store was provided by a constantly-skipping CD player (their own brand, of course). I took out the CD and it was perfectly clean, put it back in and the thing just jammed up. I almost told the guy if he PAID me $199 I wouldn't have taken the piece of junk home.

One wonders how they manage to take on additional obligations and fail
to pay their writers for so many months. I understand the entire paid
writing staff is on strike now. At least that's what the USSN writers
say. I think USSN says they "quit", since they didn't have a union.

Who uses PL-decoding all that much? I think it can be added, though.
Hit counting is done in the software. 50-cps is slow scan rate?

>I did see some spec that listed sensitivity, but can only recall I
>wasn't impressed with the number.

WinRadio's sensitivity is STATED to be 1-uV. In reality, it is MUCH
better than that....somewhere on the order of 0.25-uV.

You may be making reference to the nationwide mutual aid freqs that are commonly known, and listed in the back of Police Call.

866.0125 calling
866.5125 tac 2
867.0125 tac 3
867.5125 tac 4
868.0125 tac 5

They are in use in limited use in the Kansas City area. Kansas Highway Patrol is going 800, and they have them in their radios, Overland Park has them, Johnson County Fire, and others have them. Since they are kind of new, they aren't used a lot...yet.

Dear Fellow Monitoring Enthusiasts:

I do not know "Mr. Ferrara". He may indeed be a nice man and run a legitimate business.

I do however, ask you to -carefully- consider such requests. After personally investigating several identical postings, I have discovered them -all- to be SCAMS.

Usually the person has NOTHING TO DO WITH THE NEWS MEDIA. Remember, the news media relies on wire services and have their press rooms full of scanners.They are further bolstered by the tremedous support of local monitoring enthusiasts such as yourselves who further the status of our hobby by offering tips (where appropriate and legal) without any thought of compensation.

My investigation has discovered that these "Make Money Listening to Your Scanner" offers have -no- ties to legitimate news gathering whatsoever. Rather, they are most often a ruse by unscrupulous Insurance Estimators, Disaster Cleanup companies and Construction Firms who would seek to abuse our hobby for their personal gain. They win - we lose!

Just think, would -you- want somebody who gathered information about your family's calamity under false pretenses ("for the news media") to be the one who shows up like a vulture at your home to pressure your family at a vulnerable time? If such a person is unethical in one respect, how can you rely on their integrity in another?

There are countless Insurance Estimators, Disaster Cleanup firms and Construction Companies who operate with unparalleled integrity. Any person in need of such services need look no further than their telephone directory.

Again, no intentional aspersion is cast towards "Mr Ferrara". I only ask that you VERY CAREFULLY consider such offers.

Ethics and Integrity are important to our hobby.

Recently I was reading Monitoring Times and noticed that many of the authors ended by saying 73. I have also noticed several posts ending with this also. What does it mean? Sorry for such a newbie question but I have never heard of it before. Thanks for any enlightenment on this question.

Brian

John & Jay-

You've hit on the source of a problem: 800 MHz systems. It seems that not everyone is on 800 MHz. Those that are, have discontinued use of the VHF inter-city police and/or fire frequencies, since it means having to carry an extra radio.

In other words, this is a problem that was somewhat solved years ago, but has returned with the advent of trunking technology.

As well as being the problem, 800 MHz systems may also have an inherent capability that will lead to a solution, computer control. It requires that the trunked system have a feed to the radio channels of other agencies, so the dispatcher can patch them through for the duration of an emergency. As an alternative, a call-group might be set up with the cross-patching permanently in place. That way, a patrolman could switch to the "mutual aid" channel, and be able to communicate with all who are set up this way, without requiring dispatcher intervention.

JN> Mutual Aid frequencies are the same nation-wide. What's used
JN> in Palo Alto is also used in New York as well as New Mexico.

There are 'CMARS' freqs, but they ONLY work if the different agencies have the same radio system (using trunking) A Motorola system can NOT talk to a Johnson/Ericson system, even if they have the identical CMARS freqs installed, unless they use simplex mode.

>> AOR 2700

Currently I have PRO-26, AR2700, and AR8000 handheld scanners. At the street price of around $200, I'd suggest the AR2700 as a best buy. While the RF and audio isn't quite up to the '43's, it's not that bad either. The two features I prefer over the '43 is the attenuation by channel (on all three models) and the computer interface to dump and load the frequencies. I do find the keyboard operation of the 2700 quite cumbersome for a scanner. It's virtually impossible to link in additional banks while drive.

My two cents worth.

I'm sure there are other ways, but this is what works for me.

I have the latest Police Call, which identifies the freqs that I am listening to.
so when I here traffic on say, 800.7875 I can see who is assigned that freq in my area.

I also have Rand McNally Street Atlas, where I can punch the cross streets or addresses into the computer and bring up a street level map. This also helps to ID the town if you don't know who you are listening too.

Hope this helps.

Hi Brian !

"73" is Ham (Amateur) Radio terminology for "Best Regards".

There are a lot of carry over terms from the days of Morse Code, this
being one of them. A lot of short forms were used in Morse Code (AKA
CW...Continuous Wave) , including the 3 letter "Q" codes to help
reduce the amount of keystrokes and deciphering required to get a
message through. These short forms become standard "Ham Speak"
for many and are used in voice communications (where its not really
necessary) just by habit.
BTW, Morse Code is still being used and is a requirement to operate on
the Amateur Radio HF bands though there is a growing movement of folk
worldwide that want to have it abolished from the testing
requirements.

Hope this helps !
Cheers,
Hugh Duff VA3TO Toronto

"73s" is an expression that uncreative and lazy
ham radio operators use when they want to say,
"Goodbye and best wishes."

Source record: 225262
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have a question on the 1000XLT,

Currently I am using it as my main scanner with an All Band antenna hanging from my ceiling...

I find that I need to put the squelch up rather high to eliminate white noise on some of the 800Mhz Frequencies.. I can't mount the antenna outside since I'm in a Condo. The specific frequencies are 866.5125, 381.000, 342.200. When I have the squelch up I lose the weather channel (162.55 or 162.4). The same config on a PRO 2006 will work like a charm...

Do you have any suggestions?

Thanks in advance, Jeff jfmil@gate.net

EVAN...why no call on me...

what you need do is find a radio shack Police Call
manual of freq's for your area.....

they will list them with the police and fire depts....

Go to a Ham Store and ask the people there?
They usually carry most manuals of scanner-itis

Or a Scanner Store....obvious....or Grove...Bob Groves
treasure trove of goodies you seek out.....

or try http://www.oak.oakland.edu figure it out
and most freq's there too....

Since I posted, I've done some more tests and I think the VTech just has
a lower noise floor, allowing the line noise or some QRM out of some
device in the room to be heard. If I listened real close on my crappy
Moto cordless phone, I heard the same sort of 'sawtooth' noise, but the
noise floor of the Moto phone practically covers it up.

I've owned probably 40 different handheld scanners in the last five years and there is no doubt in my mind that none of the above is the correct answer.

If you can find a pro-43 at a reasonable price grab it. The later ones cannot be unblocked for cellular and I've never owned one of them so I can't tell you much about them but the earlier ones (don't ask me dates) have the best audio, intermod rejection, image rejection, and ergonomics of anything that I've ever used. I've always kept at least one even though I've bought and sold many.

I saw a documentary the other day that reconed the governments
deliberatly forced manufactures of digtal mobile phones to use a
weak encryption system. This was because the intelegence services
were worried about not being able to listen in on peoples phone
calls.

Any one else heard of this.

Be careful in the U.S. mates. They just snuck through a new law allowing
big brother to eavesdrop. A bill was recently passed (Quietly) by the U.S.
Government giving law enforcement the right to tap many more phone lines,
targeting many of those using the internet. The bill, (HR 4922) also forces
phone companies to provide new equipment to handle all the new taps.
There is a company that will check your line for taps. They provide access
codes that let you scan inside the phone system for any taps. It costs
about $7.50, but it's guaranteed to let you know within 3 minutes if your line
is tapped and what to do if it is.
It's part of The Information Hotline service at 900 741-4636

Note of Interest.
Here in Vancouver BC Can, We are in the process of installing a regional
Wide area emergency radio system which should be up and running by the summer
of 1998.

The system chosen is to be an 800Mhz digital trunking system,
covering an area from Pemberton to Sechelt---Vancouver to BostonBar,
Continuing down to the Canadian/US border with a few coventional Vhf repeater
tie-ins for out of area units.
The system is to be used by all emergency agencies, RCMP\Vancouver City
Police and Fire units plus other municipality fire and emergency service
Units.
The Provincial ambulance sevice will also operate on this new system too.

Its about time that this system was put into place......

There's One thing I can't figure out, Is why there was'nt a mutual aide radio
system started back ten years ago with the advent of multi channel\frequency
synthisised Radios?
The US have had systems for mutual aide for years???????

For more information on this new system
check out the the city of Vancouvers home page
at http://www.city.vancouver.bc.ca

2796. Re: Radio Shack Pro-26 on sale for $376 (Canadian)?

Newsgroup: rec.radio.scanner
Date: 1996-08-27 00:00:00 UTC

Newsgroup: rec.radio.scanner
Date: 1996-08-27 00:00:00 UTC
From: n9jig@TheRamp.net
Message-ID: <n9jig-2708960351260001@news.TheRamp.net>
Source record: 225285

The BC200XLT is a good basic scanner. It has 200 channels in 10 20
channel banks, with coverage of 29 to 54, 118 (or 108) to 174, 406 to 512,
and 806 to 960 MHz. Cellular is restorable. It is very sensitive, but
suffers from typical Uniden image rejection problems.

The power supply can be had from Radio Shack. Just get a wall wart with
12VDC, Center Positive. Spare batteries can be had from MetroWest in
Lagrange Park IL, or from sources like EEB or Grove.

In good condition, clean and operable, I would think $75.00 would be a
fair price.

In article <3221BAC7.3F65@uncc.edu>, khulrich@uncc.edu wrote:

** I'm a newbie to scanning, so please forgive any ignorance that may

Source record: 225286

All these areas (except for NY?) use 155.475 for Mutual Aid, 155.370 for Point to Point.

WI: 154.905, 154.935, 155.445, 154.680, 151.460

IL: 42.50,34,36,44,46,52,54,56,60,62,66,68,70,72,76,80,84,90
44.66, 44.70, 45.06
154.650,665,680,695,710,845,905,920,935,950
155.055,445,460,505,520
156.000
And in the Chicago area a 20 channel 800 MHz trunked system, plus the tollroads use a 10 channel 800 MHz conventional skip channel system (5 Maint., 5 Police channels).

IN: 42.42,26,10,20, 155.445, and several districts have switched to 800 MHz trunking systems.

OH: Most freqs are in the 45 and 46 MHz ranges, I can't recall specifics off my head.

On Low Band, the 42.02 thru 42.94 (20 KHz spacing) range, and 44.64 thru 45.06 (40 KHz spacing) ranges are reserved for state use. On High band, the following are reserved for state use: 154.665, 680, 695, 905, 920, 935. 155.445, 460, 475, 505. There are exceptions of course. 155.475 is a nationwide mutual aid channel, and is controlled by state police agencies in most states.

Unequal squelch thresholds on different bands is a design flaw of the
AR1000 and all its varieties, even after all these years. Live with it, or
get a different scanner.

Canada should be able to legally import cell capable PRO-26 scanners.

It seems that RS in Canada has been selling only cell blocked versions there. Perhaps they didn't want them "wandering" across the border into the US! PRO-26's sold in the UK are cell capable, however. So a cell capable PRO-26 is being manufactured.

Maybe some Canadian distributors are importing the cell capable versions and selling them now.

Moving around the province or just got that new scanner. Don't be
fooled by the frequencies that some people give you, be sure ! ! !
I have two of the latest lists of frequencies for Nova Scotia. From
2 Mhz to 23.4 Ghz. I can land mail a diskette, e-mail you the two
lists for only $10.00. Each list is about 1 Meg long (200 pages).
These lists are far better than those $ 24.95 Scanner Books out there.

Right, there is no "merge these two columns into one" feature in FM Pro
but there are any number of ways to go about combining the data. You could
also use something like Excel to do it and then bring it into FM Pro.

2806. New Radio Shack Catalog

Newsgroup: rec.radio.scanner
Date: 1996-08-27 00:00:00 UTC
From: Robert Barker <robert@mail.eden.com>
Message-ID: <32231CE7.5699@mail.eden.com>
Source record: 225294

Radio Shack has their new 1997 catalog and surprisingly they did not charge $3 for it. They only asked for my name and address to update their computer. It was already in their database. It still does say $2.95 on it so I'm wondering if other stores would charge and give the $3 coupon sticker or whatever. My catalog did not have the $3 off coupon since I got it free.

>>I am not affiliated with them--just a satisfied customer.

>WoW!!!
>PRO-43's for $499!!
>Brand new from RS they were sold for $469!!!

I agree. I paid just $329 for my first Pro43 two years ago.
My Insurance Company paid $499 for the one that replaced it
this year.

I suggest tpenn march right down to his local RS and try
to buy one *TODAY* for any price. Durham paid to buy,
pre-modify and warehouse them for 2 years. Would you
deny them a $30CA markup?

In <501fit$54h@kryten.awinc.com> pbaran@awinc.com (Peter M. Baran) writes:

>Does anybody know what happened to "Scan-L"??

Someone from printed scanner publication "A" wrote something about printed scanning publication "B", and "B" didn't like it, so "B" sued "A" *and* apparently named Peter Laws, the maintainer of the list in the law suit. Peter recently graduated from the University of Arkansas, and certainly can't afford to be caught up in the legal bullshit, so he took the list and his Web site down to prevent further exposure.

It certainly appears the entire scanning community has completely lost their minds...

I am going to an airshow on sept 8 in Scotia NY. I am looking for the
frequencies of the following performers:
Iron Eagles aerobatic team
Pepsi Skydancers
Gene Soucy
Any info would be great. I already have the Blue Angels.

Mutual Aid frequencies are NOT the same across the country, and
a moment of thought should tell you that. How can they be the
same when some agencies are on low band, some on high band, some
on UHF, some trunked, etc!?

As a result of a mid-air collision between Police/media helicopters
several years ago, a helicopter air-to-air frequency was established
for position reports in the Los Angeles Basin.

Typical reports would be as follows:

"Sky 5 is south 101 crossing the 4 level at 800"

"PD-8 lifting off of Hooper heliport south bound climbing to 500"

"Alpha Mike is North 5 crossing the 605 at 1 point 9 (1900 feet)"
"Alpha Lima has you in sight there Alpha Mike, we'll cross behind you
and were at your three o'clock"

With over 15 aircraft covering traffic on a daily basis plus the assorted
law enforcement/fire and other aircraft that fly below 2000 feet, this

frequency is quite crowded, as are the skies. This frequency is a interesting to listento when there's a police chase or significant event taking place when there are 5-7 helicopters in a hover and everyone is keeping track of where everyone else is to avoid a collision.

Amongst the position reports, pilots share information about traffic accidents, breaking news, give greetings to thier colleagues, etc.

Try listening in on 123.025 AM.

Maybe not my place to say it, but a true news media request wouldn't
offer money for information, that's called checkbook journalism.

Besides, what and who is this for, and why not just tell people that in
the post?

That is indeed interesting. I went into a Radio Shack

yesterday and the clerk critter told me I could have a

catalog free if I made a purchase. Otherwise, he would

have to charge me three dollars.

D-@>You could have posted it on a web site, or made a small posting here
-@>saying that you have the list and will email it to any one interested.

D-@>Please THINK before you post - Thanks.

Well Donald, as I said before, some people would bitch if they were hung
with a new rope.

The overwhelming majority of frequencies posted here ARE for the United
States. There are very few posts concerning Europe (especially the U.K.
included since they tax the airways and it's illegal to listen to damn
near everything).

That message was ment for the widest U.S. audience, not for European
audiance. There was no place to post that file on the internet that I
happen to have access to.

But I don't plan on getting into a pissing contest which is the majority
of what seems to occur on this Use-Net vis-a-vis honest and useful
information.

Cheers Mate!

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1996 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges. The phone number for repair is also (800)297-1023.

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the

frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Add a Plectron or Motorola Alert
Crystal Controlled Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. Although UHF versions were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

TABLE 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

TABLE 2. Plectron 700 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. | Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain. |
Repair service for the Plectron P1 and R700 models is |
offered by:

Woodson Electronics |
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. *

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

HAMFEST/COMPUTERFEST CALENDAR 1996 - NORTHERN ILLINOIS
last updated June 24, 1996

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (708)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale and ARRL for providing some of the information.

AUGUST

August 4 (Sunday) - Peotone, IL - Hamfesters Radio Club 62nd annual Hamfest and Computer Festival. Will County Fair-grounds, Peotone, IL I-57 Exit 327 East 6a.m. - 3 p.m. Air conditioned main exhibition hall opens 8 a.m. Lots of covered flea marked space, acres of free parking. Grand prize $500, 2nd Prize $300, $100 for 3rd Advance double-stub tickets $4.00, $5.00 at gate for more info e-mail Jim Riley KB9CYL at rileytrix@aol.com

August 10 (Saturday) - Western Illinois ARC Swapfest, Quincy, IL. Eagles Alps Grounds 3737 North 5 th Street. 4.5 miles north of downtown Quincy with easy access from US Highway 24. 8:00 a.m. to 2:00 p.m. Admission is $3.00 at the gate, $2.50 in advance, per person. ARRL VEC testing, all classes, is at 12:30 p.m. Reservations go to NA9Q at (217)224-8526. Indoor flea market is $5.00 per 5-ft table. Outdoor tailgating space is free. Talk-in is on 147.03. Lunch will be served on the grounds.

August 18 (Sun) - DuPage ARC, Stickney, IL. DuPage ARC Ham-fest Computer Show. Hawthorne Race Course, 3500 S. Cicero Ave. Air conditioned exhibit hall for dealers. Outdoor fleamarket spaces free. 8AM - 2PM. 6 AM setup. Admission $5. Kids under 12 free. Talk in 145.25 MHz. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517. tel: 708-985-9256.

August 25 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. Admission $5 at gate, free parking. Kids under 12 free. Info (voice/fax) (708)658-1678.

August 25 (Sun) - Vermilion County ARA, Danville, IL. Info: Gary Denison, KA9SKS, 14704 East 2750 North Rd., Danville,

IL 61834-5610. tel: 217-759-7389.

August 28 - 30 - Antique Radio Club of Illinois, Elgin, IL. RadioFest96. Holiday Inn Holidome and Convention Center, 345 River Road, Elgin, IL 60123 Ph. (708)695-5000, (847)695-5000 After 01/20/96. Info: Jeff Aulik, 1708 Parkview Ave., Rockford, IL 61107 or Carolyn Knipfel, RR 3, 200 Langhorn, Morton, IL 61550.

SEPTEMBER

September 8 (Sun) - Bolingbrook ARS, Joliet, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517, tel: 708-759-7005

September 13-15 (Fri, Sat, Sun) - Peoria, IL. ARRL National Convention. Info: Ron Morgan, KB9NW, PO Box 3508, Peoria, IL 61612-3508, tel: 309-694-2649

Sep 21 & 22 (Sat & Sun), Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Starts 6 AM. Buildings open 8 AM. VEC testing. Info, (708)457-0966. Usually one of the best hamfests in NE IL.

Sep 29 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?" Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books

The most convenient source of fire and police frequencies is the Police Call, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores for under $13. Police Call is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. Later editions have included a few pages of local airport and nonsensitive federal government frequencies. The 1996 edition contains selected business frequencies, too, but callsigns are listed only for local government and public safety licensees.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is expected soon and will be available from Grove Enterprises for about $30. This second edition is crammed

full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the world's largest scanning club, the Radio Communications Monitoring Association (RCMA). Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns. A 3rd edition is expected in early 1995.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and Kneitel's sensationalistic Popular Communications.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Microfiche is not for the casual hobbyist, but rather for the ardent listener, who can easily spend a few hundred dollars for the fiche, not including the price of a microfiche reader.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead. In the 1995 edition, fields are different than PerCon's Spectrum CDROM. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The new PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. It works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350

Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined

the world's largest scanner club, the Radio Communications Monitoring Association (RCMA).

Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. The RCMA Scanner Journal is no longer being published. The RCMA electronic mail address is RCMAHQ@GEnie.com.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters.

Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's

worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

Golly Dan, earlier YOU WROTE...

>> Want to make MONEY?
>>
>> News Media Request

Dan,

I would be the -one- person willing to go to the ends of the earth to support you IF YOU ARE TELLING THE TRUTH.

It was YOU who chose to use the words "News Media" in an earlier posting (see below).

If you are legitimate...and none of us -should- have any reason to believe you are not... kindly name the legitimate news organization to which you belong and provide an address and telephone number. Is that too much for us to ask?

If you are not willing to do this publicly, it casts a further shadow on your purported interests.

Dan, please don't underestimate the intelligence or resolve of monitoring hobbysists.

I have my suspicions Sir, and I feel that you and I have probably had this go-round before. Please prove me wrong!

OK Dan, it's your turn.....AND WE'RE LISTENING!!

-- [- - - THESE ARE MY PERSONAL OPINIONS - - -] --

A full text version of my earlier reply to "Dan" appears below.

Please No E-Mail on this subject.

Dear Fellow Monitoring Enthusiasts:

I do not know "Mr. Ferrara". He may indeed be a nice man and run a legitimate business.

I do however, ask you to -carefully- consider such requests. After personally investigating several identical postings, I have discovered them -all- to be SCAMS.

Usually the person has NOTHING TO DO WITH THE NEWS MEDIA. Remember, the news media relies on wire services and have their press rooms full of scanners.They are further bolstered by the tremedous support of local monitoring enthusiasts such as yourselves who further the status of our hobby by offering tips (where appropriate and legal) without any thought of compensation.

My investigation has discovered that these "Make Money Listening to Your Scanner" offers have -no- ties to legitimate news gathering whatsoever. Rather, they are most often a ruse by unscrupulous Insurance Estimators, Disaster Cleanup companies and Construction Firms who would seek to abuse our hobby for their personal gain. They win - we lose!

Just think, would -you- want somebody who gathered information about your family's calamity under false pretenses ("for the news media") to be the one who shows up like a vulture at your home to pressure your family at a vulnerable time? If such a person is unethical in one respect, how can you rely on their integrity in another?

There are countless Insurance Estimators, Disaster Cleanup firms and Construction Companies who operate with unparalleled integrity. Any person in need of such services need look no further than their telephone directory.

Again, no intentional aspersion is cast towards "Mr Ferrara". I only ask that you VERY CAREFULLY consider such offers.

Ethics and Integrity are important to our hobby.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

This introduction is intended for people new to the scanning hobby and is oriented to scanning in the USA. It tells where you can buy your first scanner, what features it should have, where to get it repaired if required, how to get frequency information, and mentions a few scanner clubs worth joining.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Why Scanning?

Every day and night, scanner hobbyists are entertained by what they overhear on their radios. Police cars, fire engines, ambulances, airplanes, armored cars, trains, taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air

Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies, and it's clear that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is now illegal for companies to sell recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, PO Box 98, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner:

1. has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. The lowest cost programmables can't search.
2. covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 40 channel radio will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the Uniden/Bearcat BC760XLT (a/k/a 950XLT) and discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, and Radio Shack PRO-43 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The new Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-62 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer to replace the stock antenna with an Icom FA-1433B dual band flex antenna which is thin and very flexible while providing better performance than a stock antenna.

Although it is small and somewhat tolerant of physical abuse, the range of a heliflex antenna is very limited. Augmenting it with a 19" telescoping metal antenna can improve portable reception greatly.

Since 1988, I've used the "Thin-Stick" 18 inch telescoping antenna for extended range on my portable scanners and 2 meter walkie-talkies. The Thin-Stick, made in USA by Smiley Antenna Co., Inc., is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and

the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 100 miles or more. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Discount chain stores like Wal-Mart, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 300 S. Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411.

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

KD4MOJ maintains a scanner modification server for people without FTP access. You can request a list of scanner modifications by sending electronic mail with the words GET INDEX.TXT to FTPmail@exchange.tlh.fl.us

If you cannot find files describing modifications to a particular scanner, it's probably because nobody bothered to devise a modification, or more likely, nobody has taken the time to document their modification.

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The 1996 editions contain selected business listings, too, although callsigns are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A new, 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees,

listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning Report is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine | published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information

Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to

use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

The world's largest scanner club is the Radio Communications Monitoring Association (RCMA). Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. The RCMA's monthly Scanner Journal is no longer being published. The RCMA web page is at http://comp.uark.edu/~plaws/rcma/. The RCMA electronic mail address is RCMAHQ@GEnie.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association

(RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. A one year subscription is available by mailing a $15 check, payable to Kim Moran, to:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1996 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

TABLE 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)
Radio Shack PRO-2002	R197	47K try 220K.
Radio Shack PRO-2004	R148	47K remove R148 or replace with 220K.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. Abstract

This article contains product review summaries for more than 60 old and new scanner radios and monitor receivers. Other topics include:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but you can save lots of money if you get a good deal on a used scanner. Hamfests are probably the best place to find used radios, but you must be familiar with the equipment. Hamfests are repleat with older radios you won't see in today's catalogs.

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. I purchase

most of my receivers at hamfests or horsetrade with other radio hobbyists. This article describes a few of the FM receivers in my collection, and is not meant to be complete.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Grove Enterprises (Brasstown, NC) and Radio Shack repair scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 , Bearcat BC-101 , and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. The SBE Optiscan (and its Sears clone) required poking a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000 and R7100. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the
scanner or require more detailed information, like series or
parallel resonance, load capacitance, etc.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews of these scanner models
in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT

Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jul 1996 - Uniden/Bearcat BCT-10 mobile

Note: Reprints of Monitoring Times articles are available for $2.00 each (plus self addressed stamped envelope) from Grove Enterprises, PO Box 98, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this $2.00.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

ICOM

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but

too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the Icom user with a very annoying clickety-clack, clickety-clack!

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal

frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are

backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems.

See "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage

in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except

aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage

from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although there is no mobile mounting bracket available and the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE.

1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden | with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass,

in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1984 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar:

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

TABLE 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner

crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio

operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Like what? There are zillions of things that can be done to the
PRO-43, and other than cellular, most of the rest are just not
something you "send by e-mail" due to the detailed text, graphics,
photos, and such.

A lot depends on your skill level; what you want; and if you're really
interested or not. There isn't a "shopping list", exactly.....

Correct...but sometimes agencies in a certain geographical area will have a common frequency and call it "mutual aid." Don't assume that those will be used nationwide. For instance, in Johnson County KS we 460.100 (multicast on 453.450) as a common frequency, called "InterCity." Had the powers-that-be decided to call it"mutual aid," you could be mistaken as a nationwide frequency if you weren't aware of this quirk.

The original posting on this topic was sent to no fewer than nine newsgroups. The readers of some of these (for example, rec.radio.amateur.policy and rec.radio.amateur.antenna) probably have no interest in the subject matter. For them, the posting and its responses are a nuisance, like junk mail.

Responses to this posting are also going to all these newsgroups, adding to the clutter. When you respond, please check the newsgroups to which the response will be posted, and edit the list to cover only the ones which are appropriate. And when you make an original posting, please post only to the groups where the readers are likely to be interested in the topic.

Thanks,

Roy Lewallen, W7EL

Interesting. A while back, RS had a great sale on the PRO-26 so I gave in and bought one. While the guy was closing my transaction I saw their pile of catalogs and asked if he could throw one in the bad with my purchase.

At this point, he looked at me with those vacant cow eyes and said, in his wonderfully monotone void, "I'll have to add an additional $2.95 for that". What a total looser! Here I had just made a +$300 purchase and he wouldn't even throw in a free catalog. Needless to say I haven't back there in quite a while.

The Pro-39 is another excellent scanner that can be unblocked for cell.
The mod is more difficult on the Pro-39 than on Bearcats, but the sound
quality is much better.

>suggestions on where to look?

You'll need to find a "scanner" with a FULL or "continuous" frequency range, because many scanners specifically leave out the frequencies between 475-800 MHz where the UHF TV audio and video are located.

The Yupiteru MVT-7100 and the AOR AR-8000 will both cover these frequencies, but they are a "bit" pricey if the main thing you want is TV audio. They are both over $550 or so.

Since some VHF TV radio receivers can be had in the $20-35 range, ANY radio that will cover the UHF TV audio bands will seem comparatively very expensive. I'm not aware of a suitable scanner for this that sells for less than $300.

Of course, you can always take up scanning as a hobby and use that as your "excuse" for buying the radio. :-)

I'm cross-posting this to rec.radio.scanner, so perhaps someone there knows of a more appropriately priced radio for this purpose.

>are General Electric Mastr Series Base Station/Repeater commercial
>equipment. They are high performance receivers with GaAsFET
>pre-amps & continous duty transmitters all using pas/reject duplexers.

Hi again, Johnboy,
Let's see, I believe you might not have closely read what I wrote:
"... practically any xcvr can be made into a crude rptr" - that was
supposed to indicate that those proud folks who brag of owning a rptr
don't necessarily possess any special skills.

>By the way you are an IDIOT because I do se my name & callsign
>on my internet entries.

Big lie, Johnny. Your disguised posts under the phoney address
suprise2@where2.edu contained no name nor callsign. Not nice to
swear at folks and not have the guts to sign your name or use
a valid address. But after having brought that to the net's
attention a week or two ago I see you're now including a name
and call. Good boy. You learn quickly! But the address is still
phoney. Bad boy.

>IF you were really a ham you would know that all you need is a callsign
>to get someone's address so you don't need to liist an address in
>every entry.

But Johnster, you first need to provide a callsign. When you called
Burt some filthy names you didn't provide a name nor call nor
valid address. Bad boy. Shame on you.

>Sounds like you are bootlegging on ham radio.

Now Johnjohn, your batteries are still in backwards. You bootlegged
on Netnews and got caught. Bad boy.

By the way, I've gotten some emails regarding you. Is there any truth
to you having started out as a jammer, and when you were finally kicked
off all the Portland rptrs, you had to install your own in order to
have folks to talk to? Very very bad boy.

73 from lovely Hawaii,
Jeff KH2PZ / KH6

Hang on a moment. I'm in the UK and my Pro-26 isn't quite continious.
It leaves out 520-760 Mhz, presumerbly to make things cheaper.
Not that its that important, this range is in the TV band. It can be
nice to be able to listen into TV sound, but its not that important.

I got the opportunity to put out a "non-injury accident in progress" once.
A guy was watching his eldery neighbor who was trying to back out of his
driveway. He was bumping into all the cars on the opposite side of the
street. I asked the caller if the old guy was gone, and the caller said
it was happening as we spoke, hence a non injury in progress.

I guess you had to be there.

I replaced the cone/driver in the Drake speaker w/ a RS 3" (I think)
cone/driver, which has a larger magnet and altogether better sound.
The improvement is dramatic, to my ears, at least, and the cost was
negligible--under $20 as I recollect. I wanted to preserve the
cosmetic match between the receiver and the speaker case.

Yes! That is one of the claims of the FT-50R. It has an excellent
commercial speaker, and loud audio. If you need more, get the optional
external mic and clip it on your shirt!

Manually.

Once the DS-8000 has been fitted and installed it is activated by pressing
the "local" button. Pressing it agian turns the DS-8000 off.

Oh boy, I wonder who might have actually written this ?
Looks like old "you know who" has learned how to play the
"forgery" imposter game. It obviously wasn't me.
When have you seen such rubbish posted by me before a certain chain of
incidents ocurred ?

Need I spell out for you who would be the only person that feels the
need to play such childish games ?!
Since I have only been posting relevent informational messages of
late, why would anyone else but a certain scan mods "god" bother to
attempt to rattle my chain !?
Dare i suggest that the same dude is the one posting the "Funky
Stench" nonsense. How about all of those "I need some mod info"
replies that are answered to phantom queries !

Your writting style is as unique as your bad attitude.
Your motive is as obvious as a shown hand of cards.
Poisoning this newsgroup with rubbish and answering phantom info
requests. How old are you ?
Been too brutalized to confront me like a man ? :)
Your REAL knowledge revealed your REAL colours.
I guess If I got the snot kicked out of me I'd be a little shy too !
Somebody's 'patooty' is really smarting.

Your true colours are showing dude ! Go have another swig 'drunkman'.

Anyone care to guess who our latest imposter is ?

The REAL

2903. BC200XLT battery pack problem

Newsgroup: rec.radio.scanner
Date: 1996-08-28 00:00:00 UTC
From: massey@sprynet.com
Message-ID: <501g5s$d6n@juliana.sprynet.com>
Source record: 225175

I've had a 200XLT for about 5 years and recently the battery pack refused to take any further charges. Feeling adventurous (and cheap) I decided to replace to batteries inside the the pack by getting 6 AA NiCads with solder tabs and soldered them together myself.

Up to this point everything was going fine. A voltmeter read approx 7.2V and I was able to run the scanner for several minutes before hooking up the charger. After charging the scanner, I disconnected the power supply and turned on the switch and nothing happened. I took the battery pack off and measured the voltage and it measured 8.2V which seemed high to me. I then discharged the battery pack by running my power drill from it until the voltage got back down to about 7.5V. When I put the battery pack back on the scanner, the scanner work fine. In fact, I ran the scanner for over six hours before the battery pack went dead.

While my scanner was happily running on the new set of batteries, I decided to check the voltage from the power supply and it was 18.7V. Thinking that I had found the problem, I headed down to Radio Shack and pocked up a 12VDC 500mA power supply and found that it was putting out over 17V. When I measured the voltage on the terminals on the battery pack, it read 9.6V regardless of wheather I used the Uniden or Radio Shack power supply.

My question is: Are these readings in the normal range or do I need to buy a new battery pack or charger or both?

Thanks,
Joe

2904. Freq Down Converters

Newsgroup: rec.radio.scanner

Does anyone out there know where I can get a schematic and a parts list for a simple and easy to construct frequency down converter. 868mhz to 950 mhz down to 400 to 512mhz. Any information would be appreciated.
Thanks.
rlane@keytech.com

I had the same experience. Aftering purchasing something he said he
would have to charge me but it would be refundable on my next purchase.
So i said we can do it the hard way or the easy way. I ended up making
him give me a refund, then bought the catalog, then bought the item and
made him refund the catalog price. he really had to do a lot of work to
end up with the same results.

>rlane@keytech.com

Homebrewing equipment at UHF frequencies and above starts to get
tricky as even component leads introduce enough inductance to have to
be considered in the design. Printed hairpin filters and inductors on
the circuit board can be difficult to replicate.
Unless you are an experienced builder familiar with RF at these
frequencies it is suggested that you go with a tried and proven kit
for something like this.
Ramsey Electronics (they advertise in many of the electronics and
radio magazines) carry such a kit. They also offer the manual for
their kits for a few bucks if you want to review it or go ahead and
try building it on your own.

Cheers !

A loser indeed! I have never paid for a RS catalog, despite the cover
price, and with few exceptions, I have gotten one every year since about
'87.

>little more for the "flexible" 9913 or is the regular 9913 really not
>that difficult to work with as long as you don't bend it to much?

You can bend 9913 all you want. It just won't take repeated flexing
and bending beyond a certain amount.

>BTW...The ad does not say this coax is made by Belden. Is Belden the
>only company that makes 9913 coax or can anyone make it? Should I use
>Belden only?

9913 is a Belden in-house part number. It is not likely that anyone
else would use it. They would use their own numbers even though the
specs might be the same, less, or better. But you should investigate
the specs and the manufacturer of that new stuff before committing to
it. Back during the CB Boom years, a lot of hokey coax was unloaded
on the unsuspecting public. Stick with the brand-names for coax,
including Belden, Alpha, Andrew, Scientific-Atlanta, etc. If it has a
name that can't be located in any of the leading industrial
directories, then I'd be suspicious of it.

Dale Hochhalter <mcgyv@iw.net> wrote:

>Any one Know How I can double my channels to get 400?

This article/file is for the benefit of all.

(c) 1996 <All Rights Reserved> Bill Cheek-COMMtronics Engineering

This article is for personal use only and may NOT be placed on a
CD-ROM nor any other media that conveys, stores, or transports for any
monetary cost, without expressed permission of the author. This
article can only be given away, absolutely free of charge.

-Bill Cheek-

I wouldn't bother with doubling the number. That would be just about
as much work and cost as 16x or 64x the number!

That's right....the techniques for 3,200 channels or even 12,800
channels are about the same cost and effort, give or take.

But if you insist on 2x....get another SRAM identical to the one in
the PRO-39 (IC-2) and overlay it on top of the original and solder up
pin for pin so they're in parallel EXCEPT for the CE pins (usually Pin
18). Leave it isolated on the new chip, and desolder/lift the CE pin
of the old chip from the board so that it is also isolated.

Solder a tiny 100-k resistor 20 each CE pin. Solder the free ends of
these resistors together and then solder their junction to the Vdd +5v
pin of the SRAM or a handy spot on the trace that feeds it (usually
Pin 24). Install a SPDT switch somewhere, with the center (common)
lug wired to the trace that used to feed the old SRAM's CE pin.
Solder a wire from one end lug of the SPDT switch to one of the now
isolaated CE pins. Solder a wire from the other end lug of the switch
to the other CE pin.

This puts you in business with 400-channels. A replacement SRAM and
service manual are available from Tandy National Parts: (800) 442-2425

Contact me by e-mail for steerage to the 16x and 64x mods.

You can also buy an upgrade rubber ducky antenna such as the Diamond Rh77ca (I think that's the model #), or the Austin Condor. These will be a big improvment over the antenna that comes on the scanner (esp. for 800Mhz).

I work for a delivery service in southern CT. Our repeater output is 461.625 Mhz. There is a taxi company in NYC who uses the same frequency. Aparently, they are running at extremely high power, as they interfere with us just a few miles from our repeater, and they must be atleats 50 miles away. Also, THEY NEVER SHUT UP. If anybody has a frequency database CD-ROM, I would love to know the identity of that taxi service. Any help is greatly appreciated.

I'm told it has become discretionary whether or not to charge for the 1997 catalogs. With X-mas on the way the smart thing would be to let anyone with an interest have one. I know a lot of RadioShacks don't ask you to pay for it.

Cmatt.

Warren,

In Kentucky scanners are legal in an car only if you are an
employee of a news organization or hold any ham ticket.

I'd call that fairly tight, but hardly draconian. On the other
hand, they are authorized by statute to confiscate it on the
spot.

However, unless you're stopped or encounter a road check you
should have no problem. And if you do get stopped, if it's
turned off and relatively inconspicious it will probably never be
noticed. Particularly if it's permanently mounted in the dash.
After all, most cops have more important things to worry about.

Hope you enjoy your trip to the Bluegrass.

Rgds,
H

For infos about the Winradio Card and Download the Demo Software
(quite Brilliant) check: http://www.kiss.com.au/winradio/.

I read an 9 page article about the card in a german scanner magazine,
and the card seems to be a pretty good deal for the price which is 599
USD over here. Comparing to other Scanners in that price range the
card is about equal. The card comes in an Aluminium Chasis, which
shields against the computer raids. But there could be problems by
antenna raids, therefore you should use an shielded antenna wire
and not the antenna wire which comes with the kit.. The
only thing that the filters for the bandwith on the Shortwaveband
could be smaller, but maybe Rosetta Labs, did not consider that in
Europe the density of the Radio stations are much tighter than in Down
Under. I also heared that Rosetta Labs plans to release a Porfi
Winradio Card for approx 1000 USD (German Price) with different
Filters or a Pre-Selector. Since the card only comes with Local and DX
Sensivity.

Good Luck
Bailey

2946. PRO-2004/5/6 to CB SSB !?!?

Newsgroup: rec.radio.scanner
Date: 1996-08-29 00:00:00 UTC
From: hduff@ica.net
Message-ID: <504l80$60j@master.ftn.net>
Source record: 224962

Interested in listening to sideband transmissions in the V/UHF range (ie..50, 144, 430, 1296 MHz ham radio) with your PRO-2004/5/6 ? Don't have a shortwave radio with a BFO to connect to the 455 kHz I.F. of your scanner?

SSB CB radios are virtually a dime-a-dozen. Many people have one stored away in the corner of the cellar from lack of practical use. (I bought one at a garage sale recently for $20 !)

I'm considering the design of a simple and inexpensive converter to allow you to connect a 23 or 40 channel SSB CB radio to your PRO-2004/5/6 scanner to allow Sideband and CW reception. Installation would involve adding a simple pick-off point within the scanner, connecting the output of the converter to the antenna jack of the CB and applying power. Turn on the scanner, tune it to some sideband activity and adjust the clarifier for optimum reception through the CB !

Any SSB CB should work...23 or 40 channel. Since the smallest step size of the PRO-2004/5/6 scanners is 5 kHz., it would be best to use a CB with a 'clarifier' range of at least +/- 5 kHz. for full coverage (clarifier may require a simple mod for more range).

E-mail me if interested.
Although I will do a little experimenting on this in the near future, I will pursue it further if there is enough interest.

Cheers !

Source record: 224966

My arsenal: PRO43, 2032, 2006 (all cell modified) and my first scanner, the mysterious PRO36 -- a 20-channel handheld I've never seen info on here or at Tandy's website.

The PRO-36 has a GRE cpu -- does this mean it was GRE manufactured?
Anybody know additional channel or freq mods?

I heard somewhere that if, after disconnecting coax from radio during storms, you put the connector-end into an upright glass on the floor it offered some sort of protection. Wivestale or valid?

What about stacking a vertical TV antenna and an 880 mHz Yagi on the same 10' mast?

Any chance of going to a cell site, turning the squelch all the way up, and logging it's frequencies?

Thanks y'all -- Bryan

(cast my vote for Cheek)

Sounds like they are talking on side-band. I'm not an expert by any means, but from what I've been told, you can transmit just below or above the assigned frequency (Side band). If you have a CB radio then you have probably heard similar sounds because some CBers use side band also. From what I've been told, voices would sound like donald duck. As for the beeps, that's probably the same beeps you hear when they key their mikes.

Ofcourse I could easily be wrong!

The beginning of the end for this newsgroup it was to come to pass.
It's that "I've got "..."a decisive size #13EE boot" attitude that
displays the inappropriacy of such an ocurrance.

-----clip--------
>*IF* it is to be this group, please consider that a lot of people,

> Aaron

Hi Aaron.
It may take more than a CPU change to enable reception of a particular
frequency range in a scanner. If the bandpass filtering and switching
logic along with the required operating range of the VCO for the band
of interest is in place then you're in luck.

A manufacturer would not normally include extra RF stages in a scanner
then chose not to use them.
In the case of cellular, many scaners have 800 to 900 odd MHz MINUS
the cellular portion of that band working. This is where a simple mod
that ties a CPU port line appropriately will enable the cell portion
WILL work (in modifiable scanners of course).

What is the stock coverage of the 2032 ?
This will tell us a lot.

Cheers !

DM> Mutual Aid frequencies are NOT the same across the country,

They most certainly are. Specified by the FCC.

DM> How can they be the same when some agencies are on low band,
DM> some on high band, some> on UHF, some trunked, etc!?

Because the FCC has more brains than you, and has set aside
frequencies within each band for mutual aid. And they can
be patched from one system to another.

Abraham,

Rocky Flats is using a GE EDACS system on 400mhz. Last I knew the full boogie anti scanning tones were on, but I haven't checked in awhile.

This system covers fire, EMS, security, etc.

Here's the freqs..

406.350
406.750
407.150 (Control channel)
407.950
408.150
408.750
408.950
409.350
409.750
410.150

Hope this helps, Thanks Ken..

: >JN> Mutual Aid frequencies are the same nation-wide. What's used
: >JN> in Palo Alto is also used in New York as well as New Mexico.
: >
: Correct...but sometimes agencies in a certain geographical area will have
: a common frequency and call it "mutual aid." Don't assume that those will
: be used nationwide. For instance, in Johnson County KS we 460.100
: (multicast on 453.450) as a common frequency, called "InterCity." Had the
: powers-that-be decided to call it"mutual aid," you could be mistaken as a
: nationwide frequency if you weren't aware of this quirk.

Here in Ventura County, we have a similar set up, a county-wide frequency
that every emergency service department has, 156.015, theoretically so
everyone has the capability to talk to everybody, all of the FDs and PDs
have it. But 99,999 out of 10,000 times, they just switch over to the
other department's frequency, VCFD units are often heard on the Sheriff
channel and vice versa, and Oxnard fire talks to the PD on thier channel
all the time. This freq. was designed back when all of these departments
had five channel radios whereas now the VCFD has 64 channel radios, the
Sheriff has something like 48 channel radios, etc.

My arsenal: PRO43, 2032, 2006 (all cell modified) and my first scanner, the mysterious PRO36 -- a 20-channel handheld I've never seen info on here or at Tandy's website.

The PRO-36 has a GRE cpu -- does this mean it was GRE manufactured?
Anybody know additional channel or freq mods?

I heard somewhere that if, after disconnecting coax from radio during storms, you put the connector-end into an upright glass on the floor it offered some sort of protection. Wivestale or valid?

What about stacking a vertical TV antenna and an 880 mHz Yagi on the same 10' mast?

Any chance of going to a cell site, turning the squelch all the way up, and logging it's frequencies?

Thanks y'all -- Bryan

(cast my vote for Cheek)

2979. How do Images get made?

Newsgroup: rec.radio.scanner

I was trying to figure out how images are created inside a scanner. I read through the material in the Police Call '96 and everything made sense about the additive nature of the signals. It appeared as if the example was made on a single conversion unit.

What wasn't entirely clear was how images are created on double and triple conversion units? Are images related to all IF stages or only to the first or last IF stages?

I don't have my BC2500XLT manual handy, so I can't quote all of the IF frequencies... But using that as an example, how do I calculate possible image frequencies?

<flame mode on>
Being a monitoring enthusiast for 12 years (and an amateur radio operator), I find it upsetting to see the hobby disrupted by a select few who seem to dervive more pleasure out of causing problems than simply enjoying their hobby.

It also pisses me off to no end to see people who have contributed FUCKING ZERO to the hobby, go off and flame the likes of Bill Cheek, who's contributions to the advancement of the scanning hobby deserve aclaim. I may not agree with some of the things Bill says, but I respect the man for a. Having the balls to have his own opinion, b. Helping out the monitoring community by making good technicial information available, and c. getting on the nets and participating despite the bullshit that gets thrown at him.

But anyway....
<flame mode off>

A few things comming out of the Boston area for those of you who might be interested...

1. With the Scan-L list no longer functioning, a new, moderated, scanner list will be set up shortly. Before people get all bent out of shape about it being moderated, considering how some people tend to get into "asshole mode" around here, moderation is probably a good thing to keep the topic on track; VHF/UHF+ monitoring, SIGINT, and technicial discussions. Once it's up, I'll let you all know.

2. Those of you in the Boston area might want to stop at the Prudental Center on the first Friday night of the month. A little birdie told me that some SIGINT hobbyists from that area started using the Boston 2600 Magazine meeting time and place to get together to discuss their hobby. Those of you who have something against "hackers" should get their head out of their ass and get the real story by showing up sometime to see what it's about.

3. Rumor has it that a new newsletter will be coming from a certain group of Boston technological hobbyists that will contain a sizable RF/SIGINT section; including some good technical articles which will answer some recent concerns around here.

UNIDEN SCANNERS and Realistics made by Uniden
==========

Uniden does their darndest to make it difficult to
hack their scanners. You guys have some work to
do. Here's the deal: Even though all NFM
discriminator chips have a SCAN CONTROL pin,
Uniden doesn't always use it! Some Uniden
scanners have a separate Squelch circuit with the
SCAN CONTROL pin on the discriminator unused! You
have to find the real Squelch circuit, and then
determine the Logic for that circuit. It's easy,
but differs from one scanner to the next, and I
can't cover them all. I need your help.

See Table 2 below for a good reference. By and
large, those with scanners of Uniden origin have
to tackle the preliminaries in this fashion:

1. Locate the NFM Discriminator chip - you will
find the Audio pin from Table 1. It remains valid.

2. Determine if the SCAN CONTROL pin on that chip
is used. (Follow its trace out on the PCB)

A. If so, then determine the logic order. If
the SCAN CONTROL pin is used, then we can
use it!

B. If the SCAN CONTROL pin is not used,
then locate the real Squelch circuit.
The schematic and block diagrams in
the service manual will be helpful.
Uniden uses chips like NJM2902,

NJM2904 & NJM3403 to generate Squelch
logic. Use your voltmeter to find a
spot where the Squelch logic is 0v and
5 or 8v, depending on the setting of
the Squelch control. Table 2 shows
details for those Uniden-made scanners
with which I am familiar.

TABLE 2
UNIDEN SQUELCH CHIPS
Updated 4/08/96

NFM DISCRIMINATOR CHIPS - BASEBAND AUDIO - SQUELCH GATE DATA
==========

There is a growing interest in tapping the
baseband audio out of various scanners for
decoding of a variety of esoteric signals,
including CTCSS, SCA, FSK, RTTY, FAX, etc. By and
large, such signals cannot be take from TAPE REC
jacks, headphone jacks, and EXT SPEAKER jacks
because of the voice-band filtering that is done
between the signal source and these output jacks.

Therefore, it is necessary to tap the "baseband
audio" directly at the output of the discriminator
chip for your scanner. The below Table shows a
list of scanners, the discriminator chip(s) used
in the scanner, circuit symbols of those chips,
and three pins of general interest on the chips:
RF-Input, Scan Control, and, of course, the
baseband audio pin.

Even though your scanner may not be listed, if you
can find its discriminator chip, it will be listed
with one or more scanners below, the pins of which
will be the same for your unlisted scanner!
Corrections and additions to this list are
requested. See my mail and other addresses at the
end of this file.

Bill......I personally think if you moderate this newsgroup it will be ten times worse than it *was*. I don't think it would do any good. ISP don't care what is going on as long as they are getting their money! We have seen that already. So what good will it do? I for one feel that if we *all* grow up and act responsible we can get back to normal. I am sorry for the flames I caused here and will try my best to keep my opinions to myself.

2989. Want - Frequency Counter 1-1300 MHz LCD Hand held

Want Frequency Counter 1-1300 mhz LCD Hand Held.
I am looking for a Frequency Counter like the Radio Shack pocket-size
one that sells new for $99.95. It's range is 1 to 1300MHz.

Let me know what you have, what it does and how much you want for it.

mailto:rtwodtwo@pws.net

John in Roseville California (near Sacramento).

2991. frequency counter/ scanner trick

Newsgroup: rec.radio.scanner
Date: 1996-08-29 00:00:00 UTC
From: xwing@mindspring.com
Message-ID: <50305h$6e0@camel0.mindspring.com>
Source record: 225007

I have found that if you take two scanners in one hand and a frequency counter in the other, toss them in the air and you can juggle just fine!

SERIOUSLY, I tried using an antenna-mounted scanner pre-amp on several models of frequency counters (Radio Shack, several Optoelectronics) and found it to boost their pick up range. You have to play around with the gain a little to find the best setting, but it works. It seems to work especially well with a bandpass filter or specific frequency range antenna. It just about makes the Radio Shack model worth buying(but not quite). Give it a try!

roadkill@ilinks.net (roadkill) asked:
> Does anyone know the freq. (mhz) for cell phones in Atlanta, GA, USA.

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Cellular Telephone [22.902]

Chs Freqs (base) System Use

800-832 869.040 - 870.000 A - RCC voice
1-312 870.030 - 879.360 A - RCC voice
313-333 879.390 - 879.990 A - RCC data
334-354 880.020 - 880.620 B - Telco data
355-666 880.650 - 889.980 B - Telco voice
667-716 890.010 - 891.480 A - RCC voice
717-799 891.510 - 893.970 B - Telco voice

Transmissions are FM. Channels are 30 kHz apart. Mobiles
transmit 45 MHz below the base (824.040-848.970) and are usually
repeated by the base.
Channels 800-832 are also identified as Chs 991-1023.

Tom,
Agreed. I have been looking at this NG for only a month or so, and share the frustration of cutting through the crap to legitimate and interesting statements. No problem with differing views, but the attacks are a waste of time.
Really, who reads 'em anyway? After reading a line or two, you bail. Unfortunately, a good point may have been made in the doc, but never gets read. I do congratulate and thank those parties who seem to chosen a higher path. JN

>It certainly appears the entire scanning community has completely lost
>their minds...

No kidding. I just received a thinly veiled, glossed-over threat from publication "B", myself. Someone sure is getting hard-up these days.

But it ain't the ENTIRE scanning community, Clay. It's just a few individuals and maybe a company or two that think hardball is their game. It's downright weird how this cacophony of squeaking wheels can create such a ruckus and get away with it.

But I can tell you part of what's happening. The radio market is going sour for technological reasons and lots of small businesses are in the failure mode......just like after the CB boom ended in 1980. Some of these guys are downright desperate and are on the lookout to snag anything that looks like it has a pocket with some cash in it. That's part of the problem.

Now it ain't only the MARKET that's shaking.....it's also the hobby. The biggest share of the radio hobby is dependent on voice communications for its interests......and it just happens that voice is the least efficient mode of RF communications. Technology is creating many alternatives to voice, including privacy protection for what voice comms are left.....ala DES/DVP, spread spectrum, and digital methods.

All of radio is in a bind right now......and even the dregs of the hobby are crawling out into the open like worms outa the ground after a rain. A few bad apples always did tend to spoil the barrel. But that's only the half of it. The other half is this newfangled networking scene we have now, where even the passive hobbyists can jump in for a go-round, just like hams and CB'ers did for years.

Everyone knows that the ham and CB bands are chock full of peeing contests; spectrum wars; and some very realistic flamefests. Now get this......if you listed all the perpetrators of trouble here on this honorable forum, isn't it an interesting coincidence that the great majority of them are also HAMS? Not to say this is a reflection on amateur radio.....it is NOT. It is a reflection on the problems that have beset amateur radio for so long.

Something to think about.

Bill Cheek

For those of you who *THINK* I posted this, you are entirely mistaken. To begin with, I did not (as this is not my writing style). There are others in this newsgroup who have stated (and I will not mention names) that they will get evewn with me. This is one of those ways. Its call a forged post. It is real easy to have the newsreader post a return address other than the one from which the article originated. I could do it, if I really wanted to. My question is why should I?

However, since the Children want to play, they will play. You might also notice, that I am posting to this today, because it is the first time this particular article has appeared in this newsgroup (on goodnet). It wasn't here 4 hours ago. So, it was posted outside of the system from which I am posting.

Note for the forger:
Since you wish to create a problem between me and others, you will be found out and you will answer for that crime. I wouldn't be too surprised if your ISP cut your account after this. So, Make your play, but know this, you will be traced, and I will know who you are. After that, I will decide on what course of action to take...

Most of the time, I've had to play the little game where they charge me $3
and then give me a $3 discount! This year, I rec'd the catalog without
having to pay anything. If I have a complaint about the catalog it is that
there isn't anything new that I have to have so I can spend money that I
don't have!

Hi James,

The following frequencies are used by Wendy's in the US:

RESTAURANT CUSTOMER (R) CLERK (I)

Wendys 31.0000 171.3050
33.1600 154.5150
33.4000 154.5400
35.0200 154.6000
49.8300 49.8900
457.5125 467.7375
457.5357 467.7625
457.5375 468.3875
457.6125 467.8375
460.8875 465.8875
461.0875 466.0875
461.8125 466.8125
462.1625 467.1625
464.9875 469.9875
469.0125 464.0125
469.2125 464.2125

Can you confirm if the input frequency (headset) is on 467.7750?

The following frequenices are used by Wendy's in Canada:

RESTAURANT CUSTOMER (R) CLERK (I) Province

Wendys 30.4000 154.5400 British Columbia
30.5800 154.4900 Ontario

30.8400 151.6700 British Columbia
30.8400 154.5700 Manitoba
30.8400 154.5700 Ontario
33.4000 154.5400 ALL of Canada
35.0200 154.6000 Alberta
35.8800 151.8350 Alberta
457.5250 467.7500 Ontario
457.5500 467.7750 Ontario
457.5750 467.7750 Ontario
457.5750 467.8000 Ontario

Thanks,
Bob

ps: Check out the August issue of MT for a complete list of Fast Food Frequencies. The article can also be found online at http://www.grove.net/fastfreq.txt

Though it is dangerous to do so, I will assume from having read all of the SCAN-L messages that US Scanner News is the Plaintiff in this action. If this is in fact the case, US Scanner News will NEVER get a cent of my money in the future. Their product is marginal, at best, and they have reportedly failed to pay some of their staff for several months.

Sure wish there was a good monthly nationwide magazine that covered just scanning and isn't afraid to tell it like it is. Wouldn't that be a refreshing change????

IF this newsgroup is to be moderated, then my hat's in the ring,
self-nomination, if you will. I've got moderator experience, and a
decisive Size #13EE boot.

IF it is to be another group, then I do not wish to be considered.
The two existing scanner newsgroups are ample, IMHO.

IF it is to be this group, please consider that a lot of people,
probably most, do not want it moderated. A failed vote might do more
harm to "the Cause" than good. Far better to just start a new
group, and moderate the hell out of it.

IMHO.

Bill Cheek

My favorite is the GRE All-Band, sold direct (see their ads in most mags) through colorblind CRB Research (they call it the "red top" ..... it's orange) or through Radio Shack parts (it's the replacement for the PRO-34 [THIRTY FOUR] original duckie). It has a little null in the 220 band, but otherwise has pretty uniform gain across most scanner bands.

Every new scanner gets the bundled duckie tosed ritually back into the box, and fitted with one of these. If you need VHF-lo performance and size is not an issue, try the Austin Condor.

Cellular frequencies are the same all over North America, not specifically in Atlanta. Band "A" operates from 869 Mhz to 880 Mhz, and then again from 890 to 891.5. Band "B" operates from 880 to 890 and gain from 891.5 to 893. This is the base to phone frequency. For phone to site, subtract 45 Mhz.

most of the state police in maryland use the 39 Mhz band. the
centerville barracks use 39.800 and have a repeater in galena at 39.840.
if you could tell us where in maryland you travel, I/we could probably
give you more specific freqs. for the areas that you travel.

Could anybody tell me of ANY mods for the 200 ch. pro 2021 ?

I would like to expand the freq. range past the 512.000 area

Thank you

Gil Bechtel

For those of you that are interested in listening to
Indy race comms in Vancouver Canada, A temp repeater has been set
up on 469.2625 Mhz.
At the present time the only group that is using this freq, is the
race set-up crews.
Who knows who will use this freq durring race day????

3024. Scrambled?

Newsgroup: rec.radio.scanner

Source record: 225040

Our local law enforcement (155.790 MHz) has added a "Side 2" as they call it. It appears to be a scramler of some type. They remain on the same frequency, but the transmission becomes a steady, regularly spaced series of clicks or beats (about 1 per second). The voices can be heard in the background, however they are modified or reversed in some way to make them intelligible. Is any one familiar with this (if you can tell by my description)? If so, is there a device or computer software that would fix this?

Thanks

: Now *that* makes sense, at least back home in southern New Mexico. When
: I was a BLM archeologist and I needed help from our fire guys, I saw that
: truck coming from about 5 miles away. A red truck would have been
: "stealth" in the desert.... nyuk,nyuk,nyuk (I couldn't resist, Dr.
: Pepper).

I would also assume that the lighter paint, green istead of red, would
reflect a lot of heat as opposed to trap it that a dark colored paint job
would. That's why all of our rigs here in Ventura County have white
roofs, no matter what the color, red or yellow.
